In January, 1914, Messrs. Watts and Hemsted submitted proposals for the continuation of work on the improvement of the water supply of the reserve. They recommended

(1) The completion of the Barlamat dam.

(2) The provision of steel drinking troughs at the Koiyaki spring—a permanent spring, situated some 12 miles south of Mara Post (Kaplemale).

(3) The construction of one or more dams in the Trans-Mara country between the Mara and Sogor River.

(4) The construction of a dam in the Kedong Valley.

(5) The provision of pumps and drinking troughs at all dams and the erection of fences to protect the sources behind them.

(6) The investigation of a project for diverting the Siyabei River in its upper courses to supplement the flow of the Ondiri and Pesyin Rivers, and thereafter for watering the country west of Mount Suswa, known as Lekedwa; and

(7) The construction of a dam in the Loliela Plains in the upper Loita country.

The Loita Plains were described as one of the least valuable areas in the reserve, considered as a region for the permanent support of large numbers of live-stock; the grazing in the plains was frequently exhausted before the natural supplies of water failed. It was therefore thought that the completion of the first, second, and last of the projects recommended would suffice as development in that area.

Attitude of Masai Chief to proposals.

[55]

In June, 1913, Sir Henry Belfield had explained to the Masai that, when the Government had afforded certain practical examples of the benefits which would accrue from the conservation and distribution of water, the tribe would be expected themselves to defray the cost of such additional works as they might require. He therefore considered that it was open to question whether all the proposed works should be undertaken at Government expense, and that it would be sufficient to proceed with them so far as the provision for 1914-15 became available. When these funds had been utilized, he advocated further consideration of what additional works should be taken in hand and of the method of meeting the cost.

Work done by Mr. Watts.

After touring the Trans-Mara area with Mr. Hemsted in March, Mr. Watts returned to Barlamat and continued the construction of the dam. Early in April he visited Ngori Gori, on the border of the Loita Plain and close to a branch of the Chepalungu Forest. En route he repaired one of Mr. Catchpole's dams near Lemo Hill. From the 8th to the 20th of April he worked at two dams at Ngori Gori, completing them for a cost of £247. One dam was 300 feet long and 8 feet high; the other was 400 feet long and 20 feet high.

On April 22nd he reached the Pesyin River and laid out work for a new dam at Ndolele. He estimated that the dams he had already constructed would protect 225 square miles of country and provide drinking water all the year round for 24,120 head of cattle or some 120,000 sheep. The works were much appreciated by the Masai in the neighbourhood, who had thrown out suggestions for further improvements required.

Work after Barlamat Valley.

On June 12th, 1914, Mr. Watts left the Pesyin dam uncompleted and proceeded to the Kedong Valley to investigate the possibility of constructing a dam on the Kedong River for the use of the Masai.

The Kedong River is one of mountain flow. In May, 1909 and March, 1911, the Greater Kedong was not even flowing as far as its junction with the lesser Kedong. In January, 1913, the combined streams disappeared a quarter of a mile below the house belonging to Manyala Manyaki and Captain [illegible], and

648 *
312

it was unusual for the water to reach that house after August in any year. A site for a dam was chosen which was believed to be in the Masai Reserve, but was, after the work had been started, found to be on Marquis Hornyold's land. Mr. Watts then suggested the completion of his dam at this place and the construction of water pipes from the reservoir to the Masai Reserve. This proposal would entail the acquisition from Marquis Hornyold of the land used for the dam spread, pipe line and inspection path, but was, he considered, the only method by which water could be supplied to the Masai in the Kedong Valley. This course was, however, open to certain objections and Mr. Watts was instructed to discontinue his work there, and employ all his labour in draining swamps on Mr. Bowker's land in the Kedong Valley. The Governor was not prepared to consider the question of the expropriation of land from Marquis Hornyold until it had been demonstrated that the use of the area for the purpose proposed was essential and not merely desirable.

In the event of proposals for the acquisition of this land falling through, Mr. Watts suggested that water might be provided by the construction of a smaller temporary dam at this spot while a permanent dam was constructed lower down the Valley in the Masai Reserve.

From July to November, 1914, Mr. Watts worked on a drainage scheme on European farms in the Kedong Valley. Water was unobtainable at these places in the Masai Reserve where the construction of the most urgent works was contemplated, and he was unable to work on them. His expenses during this period were not charged against the Masai Water Supply Vote.

In July Messrs. Webb and Morgan continued work at the Pruyin dam under instructions from Mr. Watts, but left the work unfinished owing to the commandeering of their crew at the outbreak of war.

On the 20th of November, Mr. Watts left the Kedong for the Weikei River and commenced buildings dam on the 22nd. The site of the dam was on the eastern slopes of the Mau Escarpment, south of Lake Naivasha and west of Mount Suswa. The dam was made 200 feet long and 20 feet high and contained 1,200,000 cubic feet of water. This dam was finished on the 6th of April, 1915. The Weikei Dam.

Work was resumed on the Pruyin dam in April, 1915, and the dam was completed on the 21st of May. This dam was situated in a valley at the top of the Mau Range on the west side of the junction of Il Molili and Lelwakwa at an altitude of 8,000 feet. It was 502 feet long and 16 feet high and contained 600,000 cubic feet of water. The Pruyin Dam.

Mr. Watts then constructed a dam on the east side of Lelwakwa facing Mount Suswa at Ol Motiyo and afterwards one at Marmanet. Mr Watts and Marmanet Dams.

In March, 1915, the Masai of the Kaloenyikye division contributed a sum of Rs. 10,430 to be utilised in improving the water supply of their country and the total contributions from the Masai amounted to Rs. 14,430 in June. Contribution made by the Masai.

A certain amount of damage had been caused to the dams at Lemek and Ngeri Gnai by the rains in April, 1915, and Mr. Watts prepared to repair them in August. For military reasons his visit had to be postponed and he proceeded to the Sonkoitek on the 6th of August to improve the springs on the top of the Mau and to clean out the bed of the Weikei River. During September he was working on the Il Molili section of the Mau Range. Damage to dams at Lemek and Ngeri Gnai.

Funds for the improvement of the Masai water supply ran out in September, but the Governor approved the utilisation of money accruing from stores on hand in the Masai Reserve in order that the necessary repairs to the Lemek and Ngeri Gnai dams might be carried out. A certain amount of money was also transferred from the Masai Suspense Account for the completion of these dams. With such funds it was proposed to complete the dams at Ngeri Gnai, the repairs at Lemek, and the opening up of springs at the sources of the Sonkoitek, Weikei and Pruyin streams. After these works had been completed it was decided that the continuation of Mr. Watts' services depended on whether the Masai authorised further funds for additional works of construction. Shortage of funds.

#648
312

The completion of the Ngori Gori Dams.

During November and the first half of December, Mr. Watts completed the dams at Ngori Gori. The incomplete dams had been greatly damaged by cattle in June and a large amount of reconstruction was necessary. In addition, there were two bad washaways owing to heavy rains on the first two days of December and the work was therefore unduly retarded and expensive, the total cost of completion amounting to £448.

Repairs to Lemek Dams.

Temporary repairs costing £20 had been done on the Lemek dams by a gang of porters in May and June, 1918, but in revisiting the site in November, Mr. Watts found that the lowest dam had been badly trodden in and that the second dam had suffered similarly but to a less extent. These, together with some repairs to the upper dam, were attended to at a cost of £246, and Mr. Watts left Lemek on the 6th of January, 1919.

Mr. Watts' final report.

Before leaving Nairobi on March 18th, 1919, Mr. Watts submitted a final report on the work which had been accomplished on the improvement of the water supply in the Masai Reserve. The works included :—

1. Three dams in the Lemek Valley.
2. Two dams at Ngori Gori.
3. One dam at Ravdamat.
4. One dam at Ndolele on the Pangin River.
5. One dam at the River Welkel.
6. One dam at Ol Motiyo in Kaimosion.
7. One dam on River Marmomet.
8. The cleaning of a portion of the River Sankutish and its tributaries.

Sufficient water had been stored for the supply of stock grazing on eight different areas of one hundred square miles each and there could support 40,000 head of cattle.

In every case, except at the Welkel, the water had exhausted the grazing available.

Mr. Hemsted's proposals.

In March, 1918, Mr. Hemsted reported that some [illegible] might soon be available for works in the Masai Reserve for the benefit of the tribe, and suggested that part of this sum might be expended in the conservation and distribution of water for livestock. He advocated the necessity of a preliminary survey of the area, which should be undertaken with the object of investigating the possibility of :—

(1) Providing troughs or stone pitched watering places at perennial springs.
(2) Opening up old springs which had been trampled in by cattle.
(3) Distributing water by means of pipe-lines from the large rivers.
(4) Constructing dams in places where water was entirely absent or to which it was impossible to conduct pipes.
(5) Sinking wells and pumping water into troughs by windmills.
(6) Constructing irrigating furrows.

He remarked that unusually dry conditions had prevailed during the time when Mr. Watts had been in the reserve, and considered that the annual cost of repairing washaways, which were bound to occur in some of the dams in wet seasons,* would be so large, that it was inadvisable to undertake more works of this description. He preferred the preparation of a larger number of smaller watering places, where water could be conducted into drinking troughs from springs, which should be regularly cleaned and carefully fenced. Numerous springs existed, having a daily discharge of from ten to twenty thousand gallons, which would, if properly treated, suffice for the stock able to use the pasturage available in the country.

* The dams at Welkel, Ol Motiyo in Kaimosion and the Marmomet River were all damaged during the 1918 rains.

CA8* 312

In January, 1917, the Governor considered that it was necessary to take other measures for the supply of water to the unwatered districts of the Masai Reserve. Efforts had been made to institute a search for underground water by means of boring in the Rift Valley, but these had fallen through owing to lack of machinery. He, therefore, recommended to the Secretary of State the measures proposed by Mr. Hemsted, and received approval to his proposals in March.

In that month he approved the proposal to effect repairs to dams built by Mr. Watts, where and as repairs were required. The cost of such repairs was not expected to exceed a few hundred rupees annually.

On the 19th of December, 1917, the Director of Public Works, the Officer-in-Charge, and the Chief Veterinary Officer, met to consider the question of the improvement of water facilities in the Masai Reserve. The enormous areas of low-lying land extending down to altitudes greatly lower than those of some of the more copious springs and streams suggested to them to offer ready facilities to the distribution of a water supply by means of piping. The engineering operations involved in such distribution of water over many hundreds of square miles of country, which were unusable for stock during drought conditions, were of a simple nature, and a brief and inexpensive reconnaissance would result in the mapping out of one or two projects which would suffice for all requirements for the next year or two, while continuous travel by engineers would result in the gradual improvement of small supplies by very inexpensive works, such as boring of springs and draining swamps. The general line of the pipe-lines was to locate low troughs, roughly at intervals of two miles, and it appeared that the diversion of one source of water would probably suffice for a fifty-mile area of some six hundred square miles. The cost of important pipeing was, however, considered at the time to be prohibitive, and it was decided that such an important undertaking should await a settlement of the question of the imposition of a cattle tax on the Masai.

Apart from this major scheme, the Committee drew attention to the possibility of extracting water from deep or inaccessible water holes, by means of hydro-ram pumps, such as that about to be installed at Ol-Kokiani. They also suggested that the alienation of some of the higher areas of the reserve, not suitable or required for grazing purposes, could be relied on to improve the yield of the neighbouring springs.

In January, 1918, the Acting Governor sanctioned the expenditure of £[illegible] from the Masai Expenses Account upon drainage of some swamps in the upper course of the Wuthiri River. In dry weather the whole of the water of this river is lost in the extensive swamps and reedy stretches of the river bed, and it was with a view to conserving this water supply in dry periods that the work of drainage was to be undertaken. The Secretary of State conveyed his approval to this expenditure.

In September, 1918, the Director of Public Works drew attention to the extreme interest that would attend the operation of deep bores in the Rift Valley, where it forms a portion of the Masai Reserve. Having recently visited the Ol-Kokiani water hole, some sixteen miles west of Naivasha mountain, with a view to investigating the possibilities of installing windmill-driven pumps at that place, he came to the conclusion that this water might be a re-emergence of the Kedong River. The region was covered by extensive vertical fault planes which provided opportunities for running water to leave the surface and go underground. The Rift Valley tended to lower and lower elevations in a series of gigantic steps as one proceeded southwards, and descending this descent there existed a belt of extensive depth and of under-ground water-reservoir of alluvium, a belt which contained fresh although it had no surface outlet, and although the banks and probably the bed, were impregnated with alkali. Mr. Hetzinger then considered the evidence of a subterranean outlet from Lake Naivasha to be almost conclusive, and stated that it could be absolutely established within a period of twelve months, by an extension of the preparatory observations, which had for the past eight years been carried out at Naivasha. It was, he said, an interesting subject

[illegible]

[illegible] speculation as to whether the existence of the deposits at Lake Magadi might not be attributed to the emergence of underground flows from Lake Naivasha and other surface waters of the Rift Valley, which had however heavily charged with alkali, in a long and slow passage underground.

Enormous areas of the Masai Reserve, where theoretical considerations led him to believe that underground water existed, were practically useless on account of the absence of water, and he recommended that an attempt should be made to procure the services of one of the boring parties, who were being employed in connection with the military operations, to perform a series of bores which should be carried to a depth of at least two thousand feet, unless fresh water were encountered at shallower depths. The localities he suggested for these experiments in the first instance were in the Ko-Kabiet Valley and at Ollorgis Nyiro, two marshes south of that place, where there was plain evidence of the action of copious surface water in recent times.

It was, however, found to be impossible to obtain the services of the personnel of a Water Supply Corps, although correspondence to this end was undertaken, both with the military authorities and with the Union of South Africa.

The Director of Public Works' letter, which had been forwarded to the Colonial Office in October, 1918, was referred by the Secretary of State to Dr. Strahan, the Director of Geological Survey, who remarked that recent volcanic rocks, which formed the greater part of the region in which it was proposed to bore, were usually traversed by fissures and caves, and that the disappearance of streams might be due in part at least to their finding underground channels of this description. It seemed highly improbable that the future deposits of alkali at Lake Magadi would be appreciably affected by the proposed bore-holes. He agreed that the suggestion that the freshness of Lake Naivasha was due to a circulation arising from the existence of underground outflows was a possible one, but mentioned that no re-emergence of the water had been found and that there was no clue as to the direction taken by the supposed outflows. The chances of striking there in a bore-hole appeared to be remote. Having regard to the character of the region, he considered that the quality of the deep-seated water, which it was hoped to obtain by boring, would be doubtful. The Secretary of State was, therefore, of the opinion that the project should be further considered before any action was taken which would commit the Bond to expense in the matter.

The Commissioner of Mines, in the middle of 1917, placed such evidence as was available before Professor J. W. Gregory, who expressed himself deeply interested in the proposals and considered that the chances of success in bores placed at suitable positions in the Rift Valley to the north of Lake Naivasha in the Kedong Valley and south of Mount Suswa were sufficiently good to justify the risk. Mr. Bowring therefore suggested to the Secretary of State that Professor Gregory should be asked if he could arrange to visit the Protectorate and make a short personal examination of the area in question. This has been arranged for, but Professor Gregory has not yet been able to absent himself from India for the purpose.

SECTION II.—INVESTIGATION OF THE MASAI RESERVE.

[illegible] Population Characteristics Employment for the Masai Reserve the European [illegible] [illegible] Relationship to the E.A.R. or Other Bond employees of Masai Bond [illegible] Relationship with Bond [illegible] Bond employees in water supply [illegible] in the grade of Bond [illegible] [illegible] of [illegible] other to or [illegible] to the [illegible] Bond [illegible] to the [illegible] Bond of the Bond.

In dealing with the consolidation of the Masai Reserve, it is possible to [illegible] especially the two [illegible] upon which the question is divisible, namely, the consolidation of the Masai people and those of their population, and it is necessary in either case to consider the characteristics and distribution of such [illegible] in connection with [illegible].

It is hoped, in time, as after the conditions in the Masai Reserve as to render their cattle immune to East Coast fever, all steps are now being taken to establish a branch veterinary laboratory at Kisumu where a more thorough investigation will be made into the characteristics and peculiarities of the diseases to which Masai cattle are subject.

One of the difficulties which will have to be met, after the requisite staff has been obtained, is, again, the conservatism of the Masai. They consider the stock they now possess to be better suited to the reserve than any other, and they prefer to blind immunity to disease by letting disease run its course rather than by grouping immunity through treatment or the application of veterinary science. It will require prolonged pressure to secure the performance of a continuous treatment of cattle such as dipping, the Masai themselves being too lazy and lethargic to possess the business necessary to help themselves in the matter, and no attitude of passive resistance is all that from past experience, can be expected of them. In spite of such difficulties, however, it is possible to hope for an improvement in the stock conditions of the reserve which will eventually enable not only outside industrial areas to be settled, but will also render the Masai reserve free of a danger to the stock industry of the Protectorate.

A great deal can still be done in improving the watering and grazing properties of the area. The reserve is on the whole fairly well supplied with springs and streams, but many of these are practically useless for watering large herds of cattle owing to their inaccessibility or to the unsatisfactory nature of the approaches to them. Streams frequently rush down hill-sides to disappear into the ground within a few yards of the foot of the hillside and small springs become so trampled that it is impossible for cattle to drink either. The ground becomes swampy, the supply of water gradually decreases, and at times the spring becomes extinct.

A peculiar feature of the Masai Reserve is that the large rivers flow within a few miles of each other, frequently through dense bush or forest country where there is no grass suitable for cattle and thirst-sickness in them consequently imperil. The Uaso Nyiro, Uaso Narok, Mpakai and other considerable streams rise close together on the Mau and flow through boundaries practically parallel to each other until they eventually meet and flower for through a deep gorge. But the evident position of the reserve possesses its advantage: all the large rivers have their sources at a considerable altitude of one seven to nine thousand feet, and it would be an engineering feat of no great difficulty to conduct water from these rivers into the low-lying grazing areas at a foot of the hills, some two thousand feet below. This project has been much after discussion and may be expected to recommence, in conjunction with other development schemes, when funds and staff are available. The dams which have been constructed across certain of the streams have not proved the success it was hoped, they are liable to damage by floods and are continually requiring labour and expenditure for repairs, but the possibilities of pipe-lines and bringing water to other over prospect of a solution of the difficult problem of conducting the necessary government in the Lake Plains capable of being utilised at all times of the year to carry as much stock as their acreage will hold. There is no doubt that when the water-works have been constructed any shortage of grazing for the amount of stock now in the reserve will have ceased to exist.

As a direct result of these diseases and shortage of water and grazing the Masai have maintained the old kind of cattle they possess in better relation to the conditions encountered in the reserve than any imported grade-stock. In this matter also their conservatism comes into play, but it is probable that, in the case, their contention is supported by fact. A pure-bred bull was recently purchased for use with the Masai herd in an attempt to procure a better and more marketable kind of stock, but this animal died before sufficient evidence had been obtained to prove or disprove the Masai contentions, and the problem has still to be dealt with. The Masai cattle are undersized and in bad, and present in their existing state no prospect of becoming of value to the outside market. The potential value to the Protectorate represented by a capital of 711,000 head of cattle, with an annual increase of about 50,000 head, is thus wasted, and the most

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12.
Wa-Kwafi

M 184 between the married and the unmarried people, very little work being expected of the latter, and the sweetheart system being preserved. They all, however, occupy the same village, 262 and of course the young men cannot afford to live on meat, 184 though they always come in for the lion's share when any of it is going. When parties go off on war-raids, they also contrive to eat a bullock by way of getting up their courage.

578 They lead upon the whole a very miserable life, ever threatened with destruction by the Masai, who have swept off several villages and all their cattle. The soil being the 132 very richest loam, brought down from the mountains and 134 spread over a comparatively level plain to the south of the lake, it is capable of producing anything; only the extreme dryness of the air and the very small annual rainfall, confined to a couple of months, keeps it sterile and barren. 312 To ameliorate this unhappy condition of things the Wa-kwafi have developed a wonderfully ingenious system of irrigation by artificial canals of (for them) great magnitude. They construct dams across the deep channel of the Guaso Tigirish and thus raise the level of the water to that of the plain, and then, by an intricate network of channels, they spread 262 the precious fluid over a large area, and raise their millet 241 and mohora. These products form almost their sole food, eked out by what they are able to kill in the chase and by fish from the river, though when meat is scarce they are not 156 disdainful even of rats. Of these there were simply 123 myriads. They swarmed everywhere, and nothing was too sacred for them. Need it be wondered if "oft in the stilly night" were heard imprecations loud and deep upon the wretched pests when I have been wakened up by my nose being bitten or the sanctity of my toe invaded. My books were devoured, and even the bullets in my cartridges were not too indigestible. Everything, indeed, had to be kept under iron or hung up under shots as represented on page 312.

157 As in the case of the Wa-taveta, the Wa-ejempe are 123 singularly honest and reliable, so much so that valuable goods and equally valuable food are left in their charge with the utmost confidence, and I have heard of no case of this being violated. To me, one of the most remarkable features in the character of the young women and girls was their absolute unconsciousness of fear in my presence, and the complete confidence they seemed to have in me. They indeed took

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

000 Mbugwe are Bantu. There is also a small group of Tindiga, leading virtually a bushman life in the Lake Eyasi basin, to whom reference was made in Section I.[1] There would appear to have been a movement both northward and southward on the part of the tribes, who were previously contained in a very small area by the Masai invasion of the early part of the century.

THE MASAI DISTRICT

131 161 The Masai District forms the southern portion of the large block of country in Tanganyika and Kenya, extending to no less than 21½ million acres in extent, occupied by the Masai tribe, whose numbers were given in the 1931 Census as 48,945 in Kenya and as 47,176 in the 1948 Census in Tanganyika. There will be found in the Chapter dealing with Kenya Colony further reference to the tribal characteristics of the Masai, and it will be sufficient to give here only those facts which bear in particular on the position they occupy in Tanganyika.[2]

194 The southern movement of this tribe from the neighbourhood of Lake Rudolf seems to have come to an end about the middle of last century, but its spearheads had in 1890 penetrated as far south as the Great Ruaha River and even to Uhehe in the Iringa District, whence they were driven back by the Gogo and Hehe. There were many isolated Masai raids after that time, but these were in the main carried out by Kenya Masai, whose incursions were directed towards the coastal areas on the east, and indeed took them on occasion as far as Mombasa. The Masai settled in Tanganyika do not seem to have attempted a further movement of any importance into the neighbouring areas of the Territory.

195 101 The Anglo-German Agreement of 1890 cut the Masai country into two parts, roughly equal in area, though the population remaining under the British jurisdiction was somewhat larger than that which fell under German rule. The result was to make an effective division between the Kenya and Tanganyika Masai, and though the two sections have retained a community of social interest, this has not extended to the political field. Such political unity as the Masai people possessed had existed largely for war purposes, and in peace time political as apart from religious authority was dispersed among the landowners exercising control over the groups having a customary right of pasturage in particular localities. There was moreover lacking in the case of the Tanganyika Masai a motive which might have led them to identify themselves with the Kenya Masai, namely, the need for protecting their lands from alienation by Government for the benefit of Europeans. The troubles created in Kenya by the efforts of Europeans to secure possession of Masai lands[3] were not repeated in [241] Tanganyika, where the Masai have remained undisturbed in the occupation of the country they held at the period when European rule was established.

131 133 The present Masai District comprises, in the north, the Loliondo area, the dominant feature of which is the vast Serengeti plain, with the extinct volcanoes which mark its southern end. In the centre, south of the Rift Wall, the plateau type of country is characterized by volcanic hill masses, which provide a number [312] of permanent water sources. *In the South lie extensive thorn scrub steppes,* with a low and very variable rainfall.

311 101 173 Practically the whole of the area included in the District is used only for pastoral purposes. If tradition is correct in holding that the tribe was once

K9 M 146 134

Of the 15 edible earths analysed (Appendix I, Table V), 13 were definitely richer in sodium than ordinary Kenya soils. The sodium content of these 13 earths ranges from 0·24 to 30·15 per cent. Five of these samples were from the Masai Reserve, and four of them contain high percentages of sodium. The best of these with 30·15 per cent. would form a fair substitute for Magadi soda. In the samples from the Kikuyu Reserve, the highest sodium content is 6·35 per cent.

With regard to the other inorganic constituents, only one of the 13 samples was richer in phosphorus than ordinary Kenya soil. Five of the earths are definitely richer in calcium than soil, ranging from 0·77 to 2·56 per cent. as compared with 0·75 per cent. in soil. Two of these are from an area in the Kikuyu Reserve, and it is interesting to find that they are the most sought after. The source of supply of one of them, viz., Gitirikani earth, which has a calcium content of 1·38 per cent., was at one time in the Masai country. The Kikuyu were then in the habit of making raids and fighting for this salt. They state that their cattle were fatter, bred better, and were more resistant to disease when they had a supply of Gitirikani earth. Similarly in the Masai reserve, the most popular earth is said to be that from Ol Donyorenka, and it has the highest calcium content.

K [921]

The two edible earths which were not richer in sodium than ordinary soil contained large percentages of iron. These seem particularly popular with pregnant women. On the whole, it is probably true to say that popularity is associated with either a high content in calcium and sodium, or a high iron content.

Ka M K 146 312

In addition to plant ash and edible earths, the water from certain springs is held in high esteem, especially by the women, and is used in cooking. Analyses of 15 samples show a fairly high calcium content in some as compared with different waters in Britain (Appendix I, Table VIII), the highest figure being 43·60 parts per 100,000, and the average 9·83.

(iii) *Milk from the Masai Reserve.*

#123 The map (Fig. 3) shows the numbers of rivers that rise in the hills from the Kenya border to the northern edge of the Serengeti Plain. The Bologonja and several smaller springs are perennial, but most of these watercourses flow only during wet periods, or following occasional heavy rains during the dry periods (Fig. 18). At this time the catchment areas of the scattered hills are critically important.

#13 In the hills between the boundary of the Serengeti National Park and Loliondo, cutting, overbrowsing, and overgrazing by the Masai have seriously reduced the watershed values of the area. Runoff is torrential after rains, and virtually no dry season surface water is available through the area. There are several bore holes (Fig. 19) which have the effect of concentrating livestock and causing very severe overgrazing in the vicinity.

[14] Across the hills in the past destruction of the vegetation has been very much less, largely because it is an area infested by tsetse fly, so the Masai have not grazed it much. The vegetation provides fair watershed and even the scattered dry season storms produce some surface water.

[See p. 19.--Analyst]

Figure 19.

Bore hole with windmill in northwestern Serengeti Plain. This was put in to provide dry season water for the Masai livestock. When the picture was taken (1958) the well was not in operation, consequently there was some grass cover remaining.

• 312 In the open Serengeti Plain there are a few springs and wells. The high evaporation tends to concentrate any stored water in the plains region and as a result the water supplies are limited and they are mostly saline or alkaline. Pearsall (1957) has presented a series of tables showing the analysis of water samples from the water sources of the Serengeti region.

*13 During the long rains low spots collect standing water throughout the plains of the study area (Fig. 20). Particularly on the eastern areas there is an impermeable hard pan near the surface (Fig. 15) and much precipitation remains on the surface in low spots until it evaporates or is drunk by the animals. The longer the water stands, the more saline or alkaline it becomes through evaporation.

[See p. 6.--Analys]

The Ngorongoro Highlands provide a large catchment area principally for the area to the south, outside of the study area. There are a few streams and springs on the north-western flanks of the mountains that are of importance for wildlife and domestic livestock.

Throughout the study area, wherever waterholes are accessible to the Masai they are damaged. In the north, through burning and overgrazing the waterheds of the Rau Escarpment and the Loita Plateau are being

FILE COPY DO NOT REMOVE

12 seriously damaged (Dowling, 1960; Talbot, 1960a). The same is true for the Ngorongoro Highlands (Pearsall, 1957; Perkins, 1960).

123 **SUMMARY:** Permanent waters exist in Western
30 Masailand in the form of a few rivers, springs, and wells. Seasonal water comes from standing rainwater in the open plains during the wet seasons, and pools of water in the bush country watercourses during the dry season. Waterholes on the Rift Escarpment, the Ngorongoro Highlands, Loita Plateau and numerous small hills are of critical importance to provide rainfall water. Whenever they are accessible to Masai livestock the catchment areas are overgrazed, and markedly overburned.

Summary of Warriorhood.

From boyhood upwards to the Elders' stage there are the following recognized stages, each with appropriate "rites de passage," except in the last stage. §41

(1) *Candidate Stage.*—After the boys have attained puberty, as shown by the first signs of hair growth on the face, they form bands who wander about the country receiving presents, and finally there is the hair-raising ceremony, after which the candidates are circumcised and enter the novice stage. [96]

(2) *Novice Stage.*—Its sex. Life is permitted to novices, who during their novitiate wander about with bows and arrows shooting birds for head-dresses. This stage is concluded by a head-shaving ceremony, after which the novices enter full warriorhood.

(3) *Senior Warrior Stage.*—This is a period of roughly nine years from the end of the novitiate. During this time—with certain exceptions—no warrior may shave the hair off his head. Life is in the manyatta. This period is concluded by the *Emoro* ceremony and a general head-shaving which marks the entry into the senior warrior stage.

(4) *Senior Warrior Stage.*—Warriors remain in this class until there are two age-groups in it, and then transfer to the Elders' group. Transfer from the senior warrior stage to the Elders' stage cannot take place unless there are two age-groups ready to move up together.

PART IV.—GIRLHOOD.

Work.—As soon as girls are old enough to do so, at the age of about seven, they start helping their mothers and sisters in the general work of the village, sweeping out the huts, milking the cows, nursing the children, drawing water and moving skins. There is, however, one sort of work which is never done by any uninitiated girl, and that is getting firewood. This work is specially reserved for married women. The girls' work may either be in the home village or she is a warrior's manyatta, should they have bachelors living in a manyatta. §57 [97] [98]

Sex Life.—From a very early age indeed the young girls imbibe the general atmosphere of Masai sex life. As already mentioned, those of them who have bachelors living in the manyatta sleep from a very early age—long before puberty—on the same beds as couples indulging in sexual intercourse; and even those girls who live in the home villages learn all about such matters at a very early age owing to the fact that they always sleep on their mother's bed. As soon as ever the first signs of puberty are noticeable, girls may be asked by the warriors to sleep with them, and the question of whether there is complete intercourse or not rests then entirely with the girls. Moreover, the uninitiated boys, and especially those who hear the villages as candidates for initiation, request any young girls who are not already §61 §66

lower a separate entrance leads into each of these compartments. The bed consists of a pad of dried grass over which two dehaired sear-skins are spread. Opposite the door is found a small enclosure (ol ele l ol ewlat) into which young calves are put for the night. There is often found beside the door yet another enclosure (ol ele l ol kaisiat) for young goats and sheep, if these are not housed in small pens built beside or on the hut.

/Barnum 1 cont./ yielded by the fact that a few El lumbus blacksmiths also live among the blessi blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El mawi ("ordinary blessi," as Hollis designates them), who, indeed, scarcely come in contact with them.

The opinion of many a European, that the /115/ relative diligence of the blacksmith might have brought to him the wealth of that type from the non-blacksmiths are inclined to work, is also a rule even. I have become acquainted with a large number of El lumbus who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other blessi. All them, however, were despised exactly the same as their forging fellow-caste members.

Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the blessi rule with far every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

Even the reputation that a few armourers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Bigoum from Gi bengga, an artist in his field, is just as despised as any other blacksmith. The Gi bengga people, however, jealously see to it that he does not also work for vassals of any other province or even for members of another people.

While the other bassis, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith bassis remain for a long time in the same localities. The ai lumbus have only very little livestock, but for their craft they need charcoal and herbaceous wood. They establish their lumbus where both are to be found nearby. The workshop (ai gogoni) is built close to the lumbus. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (ai ndaichaya). The smith makes his tools as well as his

/119 cont./

326 [illegible] charcoal (al ghaw, A gaw). The charcoal, to pile the height of a man, is burned out of the wood of the trees al sudrah (Ficus sycomorus), al hadeboma, al mandemada, and a few others and then carried to the smithy in this sacks. A mass (ar ard) al ghalgaw : mass of forging) serves as an anvil. The hammer (al [illegible]) al [illegible], Fig. 51 (1)

ion the shape of a pestle, the lower end of which is somewhat compressed. Working with it is pounding, not hammering. The tongs (al [illegible], al [illegible], Fig. 50 (1) /see footnote 1 above/) consist of two parts that are joined by a pin mechanism. Their grip arms are long, the grasp arms short. The small anvil stand (Fig. 50 (1) /see footnote 1 above/) (al [illegible], al [illegible]) has the usual shape. The bellows (al [illegible], A [illegible]) in /119/ represented in two forms. The one very widespread in Central Africa, which consists of two conical bags made of deerskin or goatskin (Fig. 54), is the most common. In the lower end of each bag is stuck a wooden plug, like a stopper, through which projects an iron tube (2) continuous bag. In place of the latter there is also often a wooden tube, or for both bags together a forked branch hollowed out like a tube. On the upper, wide end of the bag two sticks are bound on with small thongs so that they form the opening in a rib. The one using the bellows -- usually an old man or a woman -- grasps with each hand one of the two bags at the upper end, so that they, opened with the stretching of the bellows by spreading out the hands, let air enter. With the following pressing together of the bellows, by squeezing the sticks together, /Fig. 55-56 upper hand/ one presses the air from sitting back again and drives it through the lower iron tube. Both iron tubes open into a clay tube (al [illegible], al [illegible]) lying in the fire. The two bags of the bellows are manipulated in such a way that with the stretching of one the other one is squeezed together at the same time. The other type (Fig. 57) consists of a wooden bowl -- covered with skin for durability -- upon which is tied, straight, a leather bag that has a round hole on top. In using the bellows, one inserts here the thumb of the right hand and with it stretches the bag upward. With the compressing of the bag the hole is closed with the palm of the hand. Below at the side of the wooden bowl is found the air tube.

The divisions of the day *.

The Masai have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (6 p.m.).

There is also the time called Nightfall, or the hour for going (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the bullocks go to drink—this latter is the hour before the sun rises, which the Swahili call *ilee kumi* (4 a.m.).

There is also the time called The Good-red period or When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (5 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands or is opposite to us (midday), The shadows lower themselves (2-3 p.m.), and Afternoon.

* The Swahis divide their day to match the same manner as the Masai (Kaufmann, *Ostafrikaner*, p. 190).

Whatever the dark hair in originally, of males other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Circumcised patterns are often made on the upper part of the body in both sexes.

Face-work

Iron is used for weapons (spear and sword of warriors, and arrows of others), arts, little-finger, rings, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and a single arm-clasp, separate the Masai and Samburu culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Ilaikipiak, Kipsigis, Kuyo, Kony and others of the Nandi division, together with the arm-clasp; the Elkeyo have imitated them.

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 0 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 200 is correct) about 1 ft. in diameter. Shields are not set of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums.

Beliefs and Rituals

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of Enk-ai (the Masai word for God, rain, and sky), its to sacrifice, worship, it is generally said that the Masai do not believe in an after-life (and also of the Sun), but the alleged belief that the soul of a fallen or sick man turns into a snake appears some belief in the survival of the soul. This matter needs further investigation; and Merker's statement that each Masai is taken to possess his own guardian angel and let in by Enk-ai if he has been good is also in Nilo-Hamitic Dorobo. Enk-ai is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both Enk-ai and Mukkuru, the fellow who died c. 1890; then Thomson heard the Ilkiborsi prayer to Enk-ai and Mukkuru, and the Nandi war dance after a victory, recorded by Hollis after Mukkuru's death, contained also an invocation to Enk-ai and Mukkuru. The "sacred deity called Ilotorobuk," which Thomson thought was an earth-spirit, appears in Krapf's book as the Ilotorobuk, "the southern terrence God and also, like the Masai word naiterobi means no more than "that which keeps the earth," and this would seem really to apply to Enk-ai in his role as creator. Enk-ai, God, is grammatically feminine, and his wife Olapa, the moon, is grammatically masculine.

Death and Burial

The bodies of most people are put out for the hyenas, to the east of the kraal, and left on the left side as that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The

/Pg 276/

276 other leaves, for example, from the lemons, and that left to ferment for several days. Then they are hung up to dry in the shade or in the hot, and, as soon as they are sufficiently dry, they are packed together in the above-mentioned packets. To make the half tobacco, on the other hand, /[illegible]/ are tightly packed in a coarse the fermented and dried leaves, after they have been sprinkled with water, without, however, directly touching up the leaves. The very under coat is then draped into bells, which are left to dry in the sun. The

[illegible] women pay a guarantee for two packets of about half a pound each or for one bale. Only the old people use tobacco. The men smoke, sniff, and chew it, while the women content themselves with chewing and sniffing. The tobacco intended for smoking is coarsely cut. The tobacco pipes (Fig. 5) consist of a thin wooden tube about a foot long (or [illegible]) and a centrically draped clay or wooden bowl (or [illegible]). The latter is carried by the blood-thirsty, whereas they lay the clay bowls. For chewing one use

Fig. 5. (1)

Fig. 6. (1)

the same tobacco and chewed it with a little pan-fried piece of cocoa nut (or coughs). To prepare the tobacco for snuff, the smoking tobacco is first cut or fine or powdered and then ground to powder with a round stone in a piece of guard dish. To this one

/[illegible]/

[illegible] The household equipment is quite paltry. Except for two or [illegible] three wooden pots there is found first of all a number of good baskets (Fig. [illegible]) of various sizes: for nothing, the of [illegible], of [illegible] for storing salts, the of [illegible], of [illegible] and the larger [illegible] [illegible] for cooking beans, the [illegible] and for heavy loads, the [illegible]. Some have a hanging, others a slender bottle shape. They often have sewed on them longitudinal strips [illegible] of cow's leather, which are crossed with cowrie shells (5)

> 5. The shell of the pseudotin snail, [illegible], which even today takes the place of money in many parts of Senegal Africa: on the Kissoro /Nyanza/, for example, [illegible] cowries have the value of two rupiies, two pence (at an exchange rate of 1.40 marks) = 5.04 marks.

[illegible] [illegible] [illegible]. To make these vessels one puts the ripened and extremely hardened bottle gourds, the only plant that the Ibiwel grow near their hovels, and, to be sure, an piece of goat and deep dung, either in water or to dry on the hot roof until [illegible] their contents rotten, and then remove them by pulling and twisting with a brush made out of a cow's tail [illegible]. Later, the cleaning is done after daily use through rinsing with cowrie ashes. In the reason for this peculiar "cleaning" the reason where they this work is say that the vessels cleed with water now become foul-smelling and the milk stored in them does not thicken as usually as with the use of ashes, but rather deposits a layer of cream. Stews, with rice, the good bottles now take on a wrinkle, disgusting odor, they are often performed, and, to be sure, through fumigation with range of the of [illegible] wrinkle, through which the milk now is given a rare pleasant to the taste. /Figs. 11 and 12 appear here./

[illegible] The Ibiwel buy wooden bowls [illegible] 3 [illegible] (Fig. 10), one of which are sets, from neighboring tribes, while they themselves make the heavy pots [illegible] (Fig. 13). On each of the two openings of a cracker rolls approximately a fair long

/[illegible]/

[illegible] of [illegible], on which people sit to eat. The seat is made out of one piece. In that one [illegible] roughly hewn the block with an ax and then carves it with the knife. A few resting spoons [illegible] [illegible] [illegible] (1).

1. Formed from the Dschagga /Chaggar/ word [illegible] the Ideen do not have a word of their own, these they were unfamiliar with spoons in former times.

[illegible] stirring sticks for thick porridge [illegible] of [illegible], whisks (Fig. [illegible]), 1 ax (Fig. [illegible]) [illegible], 2 [illegible] and a couple of knives (Fig. [illegible]) [illegible] complete the kitchen equipment. Decorative

[illegible]

[illegible]

labor is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uninitiated boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

The only specialists in the economic sphere are the smiths, *il-kewenos*, sing. *ol-kewenot*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who all their lands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Mataputu river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[1]

Though according to Hobley a few Masai women made pottery, the Masai as a rule buy their pots from the Dorobo.

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included domestic cattle, buffalo, *el-mewenot*, and eland, *e-ewu*, which they considered to be related to cattle, and therefore fit to eat.[2] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *el-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Dorobo agriculturists, *il-ncok*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chagga, and Teweta; and for certain things, notably honey and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Dorobo; the chief suppliers of meat are Indian traders, often Sikhs,

[1] Lenkiry says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 308); this may well be the case now the Kikuyu border, though it is perhaps a recent development.

[2] The Lodia also consider the buffalo to be the equivalent of the ox. Sidney, *Historia Gentis Gallo*, chap. XII, Gentil.

The smiths[1].

All Masai do not know how to make spears and swords; this is the work of the smiths. It is they who make the weapons, and the others purchase from them.

The smiths use in the forge a stone, a hammer, pincers, and bellows, and they make needles, knives, axes, anklets, weapons, and other things.

The iron which they work with they purchase from the Swahili, or they smelt the ore which they find in the bed of the Matapato river.

Every clan has its smiths; but there is one clan, the Kipayani, to which most men of this class belong.

The other Masai do not marry the daughters of the smiths, for it

564 191

[1] The Kuenos and Dorobo seem to hold much the same position among the Masai as the Tumaloda (smiths) and Ramis (hunters) among the Somali. No free Somali enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumaloda are spread over the whole of Somaliland as the Kuenos over Masailand, and no instance is known of them giving up the trade. Still more debased and poorer are the Ramis, who, like the Dorobo, live by hunting game. Cp. Reinel, *The History of Mankind*, vol. ii, p. 450.

/[illegible] cont./

[illegible] charcoal (ni gikun, 1 gui). The charcoal, to give the height of a man, is burned out of the wood of the trees ni [illegible] (Diospyros [illegible]), ni [illegible], ni [illegible], and a few others and then carried to the smithy in this sack. A [illegible] (ni [illegible] / ni [illegible] ; stone of forging) serves as an anvil. The [illegible] (ni [illegible], ni [illegible]. Fig. [illegible] (1))

1. See p. [illegible].

has the shape of a pestle, the lower end of which is somewhat compressed. Working with it is pounding, not hammering. The tongs (ni [illegible], ni [illegible], Fig. [illegible] (1) /see footnote 1 above/) consist of two parts that are joined by a pin mechanism. Their grip arms are long, the grasp arms short. The small working chisel (Fig. [illegible] (1) /see footnote 1 above/) (ni [illegible], ni [illegible]) has the usual shape. The bellows (ni [illegible], 2 gui) in [illegible] represented in two forms. The one very widespread in Central Africa, which consists of two conical bags made of sheepskin or goatskin (Fig. [illegible]), is the most common. In the lower end of each bag is stuck a wooden plug, like a stopper, through which projects an iron tube [illegible] centimeters long. In place of the latter there is also often a wooden tube, or for both bags together a forked branch hollowed out like a tube. On the upper, wide end of the bag two sticks are sewed on with small thongs so that they form the opening in a slit. The one using the bellows -- usually an old man or a woman -- grasps with each hand one of the two bags at the upper end, so that they, opened with the stretching of the bellows by spreading out the hands, let air enter. With the following pressing together of the bellows, by squeezing the sticks together, /Fig. [illegible]-[illegible] upper here/ one prevents the air from sliding back again and drives it through the lower iron tube. Both iron tubes open into a clay tube (ni [illegible], ni [illegible]) lying in the fire. The two bags of the bellows are manipulated in such a way that with the stretching of one the other one is squeezed together at the same time. The other type (Fig. [illegible]) consists of a wooden bowl -- covered with skin for durability -- upon which is tied, airtight, a leather bag that has a round hole on top. In using the bellows, one inserts here the thumb of the right hand and with it stretches the bag upward. With the compressing of the bag the hole is closed with the palm of the hand. Below at the side of the wooden bowl is found the air tube.

Where bombs deposit the ferruginous sand [illegible] [illegible] in bags, that is, sand from which spears are largely this is /115/ scooped together in small bags, cleansed superficially by having water poured over it repeatedly, and then, packed in leather bags, transported to the workshop. In order to extract the iron from the sand, one sprinkles a handful of iron sand into the fire every five minutes and on top of it each time another two to three handfuls of charcoal. When, after about two hours of this procedure, the outer slag is broken, one has a few little pieces of iron sponge of hen's egg size all together, which then, after being made red-hot repeatedly, can be further worked. Put this the individual pieces, under sprinkling with crushed sorti dolin

[illegible]

/[illegible]/

[illegible] as a tea-stone potato, a goat cards for the other things he is paid with cattle. If the seducer furnished the iron wire, only half of the prices named is given as payment for the labor.

From thick brass and copper wire (ga [illegible]), as well as right also brass wire (ga [illegible]), copper wire) the blacksmiths draw this wire. For this they use as tools the ol [illegible] and the ol [illegible]. The former is an iron approximately a foot long (Fig. [illegible]), which is as both thick in the middle and as both slim when tapers to points. In the center it has a few central holes of different width through which the wire is drawn. Not infrequently the ol [illegible] also consists only of a piece of strong sheet iron that /[illegible]/ is not pointed on the ends. The ol [illegible] (Fig. [illegible]) serves as tongs and has the shape of sugar tongs where grasping arms are squeezed together by an iron spiral drawn around them. The drawing of small pieces of wire is done by hand, whereby one man grasps the ol [illegible], the other the tongs. The larger work the former with the two points is wedged into a forked

[illegible]

Fig. [illegible]

wooden block, while the wire slowly drawn through is fastened to a roller rotating on two forked brackets. By a slow turning of it the wire drawing does proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The spiral-shaped neck-ornament of the blacksmith women (ga [illegible]), the double-spiral earrings of thick brass wire (ga [illegible]) the women and old men, the arm and leg cuffs of iron wire (ga [illegible]), with designation of the part on which they are worn, as well as the tin ear-pendants (ol [illegible], ol [illegible]), are made by

/[illegible]/

the wives of the blacksmiths. Similar ornamental objects of wire are made by the other Maasai women. The small chains of iron and copper wire are not made by the Maasai themselves, but are bought ready-made from the caravan people or the sedentary neighboring tribes.

[illegible].

000 Character. — National pride. — Disrespect for foreigners. — Designation of foreigners. — The Maasai in the service of the Europeans. — Attitude of the Maasai living among the people toward the Europeans. — The Maasai toward their kind. — Hospitality — Position of the women. — How the Negro illustrates the character of the Maasai. — Expression of emotions and other gestures. — Strength of vision. — Art sense. — Color sense. — Orientation ability. — Song. — Maasai of beauty of the human body.

136 The most outstanding trait in the character of the Maasai is their national pride which is based on the religious view that they are the chosen people of God. God created the world and all that is in it only for them. All non-Maasai are subject to the Maasai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with Ngai at and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the soil in the sweat of work. On the other hand, God cares for the Maasai as for his children, they need not work "ol dokiro ndai ndai o work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Maasai take it by force. In fact, the Negro, in the opinion of the Maasai, only has justification for existence as keeper of the livestock created by Ngai at for the Maasai.

136 In general the Maasai designates all non-Maasai as ol mog ning, ol mogi, a term that is to be translated as "unbeliever." /117/ The Maasai does not know friendship and loyalty toward the

[illegible]

The Shilluk of the Shilluk tribe, the country to the neighbourhood of the Sobat River and the Nile. In this district living the condition of the Shilluk, who are of which Sagat is now the chief. The Shilluk is estimated to possess a population of 1,000 of whom 100 are Women, 30,000 head of cattle, 10,000 sheep and 300 donkeys.

The Shilluk tribe from Lullubia in 1902 and are sometimes known as the Fort Shilluk. They have a considerable admixture of Kibeyra blood in them. The tribe generally the neighbourhood of the Dinkas Fort and their population is estimated at 700, including some 70 Women. They are said to possess 2,000 head of cattle, 10,000 sheep and 70 donkeys. Their Women are divided into two "Sects" named Ti Tumbo and Sonia.

The Dinkas are to be found in the neighbourhood of the Fort Dinkas. Their population is estimated at 1,000 including 270 Women, and their possession at 30,000 head of cattle, 100,000 sheep and 300 donkeys. Their Women are divided into four "Sects" which names are Ti Bahanen, Ti Maputh, Ti Ethiomer and Ti Ogam.

The Nuehrol of Lullubia inhabit the country to the south of Kibeyra, which country is enclosed by the Kagem Kenagar, Kibeyra, Fumbanen, Ti of Tumbi and Sonia countries. The population of this tribe is estimated to number about 1,000 of whom 100 are Women. There are divided into two "Sects," named Ti Kiwi and Ti Maputh. The livestock possessions are said to number 40,000 head of cattle, 110,000 sheep and 300 donkeys.

In addition to the Nuer, there are considerable numbers of Wanderlin Dinkas living in the Nuer Reserve. Their numbers are probably not less than three or four thousand, and many of them possess considerable herds of cattle, and live the life of ordinary Nuer, from which it is difficult to distinguish them. They may be conveniently divided into two classes, namely, those who live in the bush and herds, and those who possess cattle. The former possess little or no livestock, and seldom almost entirely upon wild animals and berry, while the latter live in villages and subsist only to a very limited extent on game.

The former are to be found mainly in the neighbourhood of the Nuer, but small parties of them are also met in the Cam River, on the Lower Nuer River, along the Bahr banks, and in the Tonga-Nuer region. They live in low outlets and the smaller game animals, in rough shelters in the forests, or in the huts in some of the Nuer villages.

The latter are to be found on the Cam River, in the neighbourhood of Ti Dinkas and Ti Dinkas Bahr, on the western bank of the Nuer River, and in the Nuer country. In all, they probably number about 1,000.

There exists in the reserve, a special tribe of nomadic, somewhat similar to the Wanderlin, called Ti Kumbo, who habit into temporary, but are treated as subjects, and are not allowed to marry Nuer women.

To conclude, the Nuer are a Indian, conservative, skeptical people, subjectively governed by Councils of Elders, who which themselves to be invincible against to deal with the idle body of warriors whose respect of age has now disappeared, but who are still sufficiently backwardness to render authority the contents of their minors. They have been concentrated in one area, where they have accumulated enormous herds of cattle of a great quality, and considerable sheep. The outside menace of neighbourers has so not been found for the sake of the tribe as a whole, though they are superior to the rest of stock, and were possessed fighting qualities of a savage nature, which spread the terror of their name far and wide. They have considerable latent powers of organization, alertness and ability, but these are largely discounted owing to their conservatism; they have always resisted that it is in their best interests to be loyal to the British Government, and have never been responsible for any serious disturbance, being too proud to work, and rich enough to disregard him, they are probably the most backward educational native tribe in the East Africa Protectorate.

L. S. B. Leakey.—Some Notes on the Masai of Kenya Colony.

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days.

Herding.—Pregnant cattle on neighbouring tribes are carried out by the mother clans, and the cattle and sheep so obtained are some of them distributed to a mother's parents and friends and some kept for herself. When cattle are raided from another clan or sub-clan in order to repay a murder (see Murder), all unmarked, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep these would certainly bring bad luck on the raiders.

Part II.—Ownership Rules.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a live live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks.

Murder.—Should a man kill a member of his own sub-clan there is no penalty. "What would be the use of taking a life from man's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man and the murderer's sub-clan and *ntl* to raise cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (see Raiding, above).

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary warriors or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and work as a true Masai if he so chooses, but never a smith.

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough flesh side). Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not also sexual), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock.

[illegible]

The only specialists in the economic sphere are the smiths, *Kiwanen*, sing. *ol-kiwanen*, who live segregated from the rest of the Masai, and marry among their own people. They have a distinctly inferior status, and are despised by the Masai, who all their lands before taking anything from a smith. At one time the smiths had some deposits of iron ore, such as those in the Mangatto river; but throughout the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[1]

Though according to Gulin a few Masai women made pottery, the Masai as a rule buy their pots from the Dorobo.

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *el-ximmen*, and eland, *o-ximen*, which they considered to be related to cattle, and therefore fit to eat.[2] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they went to eat meat, build a rough shelter called *el-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox a given name of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of everyone. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Dorobo agriculturists, *Ilwanik*, whom they despise, in order to get what they want. The chief suppliers are the Kikuyu, Chaga, and Teveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Dorobo; the chief suppliers of meat are Indian traders, often Sikhs,

[1] Lenkey says that the Masai buy their swords from the Kikuyu (*J.R.A.I.* LX, p. 308); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[2] The Galla also consider the buffalo to be the equivalent of the ox. Salney, *Ricerche Geneti Galla*, chap. XX, Genti.

[illegible] [illegible]

- [illegible]

[illegible]

[illegible] gear or sleeps. Other shapes consist of such a piece of a thin tree trunk, which bears on its lower end a wreath of branches, or else of a wooden handle on whose lower end, in little placed crosswise, or two short cross-sticks. The bin-handle under an and bells. A little board top [illegible] [illegible] of soft wood and a rotating stick [illegible] of hard wood (1)

1. Separately from the of [illegible] [illegible] and of [illegible] [illegible]

[illegible] same as fire-tongues (Fig. 19). To make fire, one holds the little board firmly on the ground with both hands, while another kneels before it and, twirling on it with the stick, produces the necessary friction. After approximately half a minute, when the fine dust-rings collect off the hard wooden, one throws on some dried cattle-dung. As soon as this starts to glow, one puts fresh on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves. With the household equipment also belong the longer-handled pouches

[illegible] (Fig. 18 [illegible] see Fig. 17) [illegible], which in former times were loaded only on donkeys, but now are also carried by the women on their backs, just like those leather bags [illegible], when they set out to buy vegetables.

[illegible]

[illegible]
by him one or more times, returned to him again. Although such a legally perfectly valid marriage takes place, the bridegroom in this case often pays no bride price. Moreover, the bride is not supposed to be from the lineage of the bridegroom's mother, nor should her mother belong to the lineage of the bridegroom, or her father to his age-class (?)

1. Cf. Chapter IX of this part.

[illegible] or to his age-class associates [illegible]. The bride may not be from an older age class or the same one, or a much younger one than the bridegroom.

Younger brothers are not supposed to marry before the older brother, younger sisters not before the older sister, but as a rule they can buy permission for the marriage from them by paying one or a few head of cattle, in the place of which now, when the blood we pose in livestock, a couple of pots of honey often appear. A marriage between later brother and sister is not permitted; this is regarded as incest. Moreover, the man may not marry two women from the same lineage; it is precisely in consanguinity to the same lineage that consanguinity is seen, and wives of a man may not be consanguineously related.

Moreover, a marriage between relatives of bloodbrothe and those of maternal brothe is not permitted.

Widows [illegible] or divorced women who have living men may not marry again, but live with men who belong to the age class of their deceased husband. If there is no other obstacle to marriage between them. Difference in wealth is in practice no obstacle to marriage insofar as the poor man does not have enough livestock to pay the bride price for the daughter of a wealthy man. The man may not enter into a further marriage until at least two months have elapsed since his last wedding.

585 The wedding feast, elegantly in accordance with an ancient custom, is popularly set for the third day of the month. The wedding company consists of the relatives and friends of the bridal couple and the inhabitants of the kraal in which the bride's parents live.

[illegible]

When one so often sees how the wooing flirt with the girls and how the latter act lovingly with the former, one would expect an abundance of expressions of tenderness. But here, too, this does not turn out to be true. The only pet name that the bluetie gives the girl is *jamani* [illegible] = my darling, while the girl calls him *ni [illegible] lai* = my friend, or she may *[illegible]* = I love you very much, to which the wooing replies *Ahai [illegible] ni gnoroli* = we shall see (literally *[illegible]* /I shall see or sight/).

XIII.

The blacksmiths. — Their own breeds. — Their social position. — Attitude toward the blacksmiths. — Workshop. — Tools. — Iron extraction. — Technique. — Blacksmiths' products; their prices. — Wire drawing.

The breeds of the blacksmiths lie isolated, apart from the true blood breeds. It is not correct to designate them as a blacksmith tribe, since there are blacksmiths (*ni lemmi, ni lemmu*) in all three tribes and also in all lineages, except the Si Ahmous, and neither a single tribe nor a single lineage contains exclusively of blacksmiths. They form a caste of their own and are the pariahs of the breed, the despised and detested, *the outcast*, whom one would prefer not to tolerate if one did not need them so urgently. From ancient times the trade has been handed down from father to son, who only practices the calling after his marriage, therefore as *ni mirna*. One cannot detach oneself from the caste by not practicing the trade; rather, one who comes from a blacksmith family always remains *ni lemmi*, no matter whether he works as a blacksmith or not. If, on the other hand — which happens only very exceptionally — a bleni who does not belong to the blacksmith caste permanently or temporarily practices the blacksmith's trade, he will, to be sure, also be regarded with scorn, but neither he himself nor his descendants will be despised as blacksmiths or counted in the blacksmith caste. A blacksmith bleni (*nin ne ni lemmu*) in the vicinity of other breeds brings the latter bad

[illegible]

564 /111 cont./
326 luck and would cause their inhabitants illness and death for man
and beast. Even in an emergency one never claims the hospitality
[777] of a blacksmith, any more than one ever grants him guest privileges.
[574] The warriors coming from blacksmith families do not live in the
[701] ordinary warrior kraals, but in the smaller blacksmith warrior-
kraal (ol manjata l el moran l el konono) and only with daughters of
blacksmiths. They do not set out for the battlefield with the other
warriors either, but alone, and naturally bring along, since they /112/
are few in number, only a little booty each time, which then often
enough is simply taken away from them by the other warriors. An-
[582] other Masai does not marry the daughter of an ol kononi, just as the
latter's son dare not desire in marriage the daughter of a man who
does not belong to the despised blacksmith caste. Even the extra-
[837] marital association with a woman or girl belonging to the black-
smiths is regarded as disastrous for any other Masai. It is believed
that he will sooner or later lose his mind, will never be able to
become the father of a healthy child, or on the next field expedition
he will be killed by the spear or arrow of an enemy. How despised
[784] the blacksmiths are is shown by the fact that a Masai does not dare
[192] to pronounce the word "ol kononi" after the onset of darkness (1).

564
326
114
784
192

1. More than once the people, when in camp, in the evening, I wanted to speak with them about the el konono, begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and thus also on the evening of December 31, 1901, when I was camped near a Tatoga settlement on the steppe southwest of Mburu. A lion then penetrated into my camp in the night and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the Masai made me responsible for this incident, "it would not have happened if you had not spoken about the el konono last evening; we have so often told you this."

/112 cont./

564 326 [192] [784] [578] because he thinks a misfortune will be conjured up by it: it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kononi" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 326 779 829 [783] The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous: if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 197 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1905, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them

[563] who know it." This statement by Hollis is ex-

/112 cont./

564 326 [197] [198] 114 [563]

/footnote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564 326 461 [114] The opinion of many a European, that the /113/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El konono who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564 326 783 Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564 326 Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Engussa from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugge people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

564 326 361 [314] [317] [347] [354] 326 314 While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (el guguet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (en edoñschore). The smith makes his tools as well as his

/113 cont./

326 [314] [324] charcoal (eñ gúkuo, ñ guk). The charcoal, in piles the height of a man, is burned out of the wood of the trees ol mokotan (Albizzia anthelmintica), ol kadedemma, ol mandemando, and a few others and then carried to the smithy in skin sacks. A stone (os soid l eñ 325 413 gidoñgore : stone of forging) serves as an anvil. The hammer (os gisirjedi, el gisirjed, Fig. 21 (1))

1. See p. 150.

has the shape of a pestle, the lower end of which is somewhat compressed. Working with it is pounding, not hammering. The tongs (ol garamet, el garameta, Fig. 22 (1) /see footnote 1 above/) consist of two parts that are joined by a pin mechanism. Their grip arms are long, the grasp arms short. The small striking chisel (Fig. 23 (1) /see footnote 1 above/) (ol oiseñge, el oiseñgen) has the usual shape. The bellows (eñ gunel, ñ gunel) is /114/ represented in two [171] [237] forms. The one very widespread in Central Africa, which consists of two conical bags made of sheepskin or goatskin (Fig. 24), is the most common. In the lower end of each bag is stuck a wooden plug, like a stopper, through which projects an iron tube 20 centimeters long. In place of the latter there is also often a wooden tube, or for both bags together a forked branch hollowed out like a tube. On the upper, wide end of the bag two sticks are sewed on with small thongs so that they form the opening in a slit. The one using the bellows -- usually an old man or a woman -- grasps with each hand one of the two bags at the upper end, so that they, opened with the stretching of the bellows by spreading out the hands, let air enter. With the following pressing together of the bellows, by squeezing the sticks together, /Figs. 21-25 appear here/ one prevents the air from ebbing back again and drives it through the lower iron tube. Both iron tubes open into a clay tube (ol modi, el modio) lying in the fire. The two bags of the bellows are manipulated in such a way that with the stretching of one the other one is squeezed together at the same time. The other type (Fig. 25) consists of a wooden bowl -- covered with skin for durability -- upon which is tied, airtight, a leather bag that has a round hole on top. In using the bellows, one inserts here the thumb of the right hand and with it stretches the bag upward. With the compressing of the bag the hole is closed with the palm of the hand. Below at the side of the wooden bowl is found the air tube.

are welded together. As this shows, the extraction of iron is very difficult work. Therefore it is still found only rarely today. For the
[437] most part one works iron wire, which everywhere in the Masai country is the favorite article of barter. Pieces of wire 15 to 25 feet long are twisted together; when they are red-hot, they are sprinkled with snail shells and then hammered together. The object ready in shape, for example, a sword blade, is smoothed and pol-
326 ished with volcanic slag and sharpened on a stone. The principal products of the blacksmith art are: spear, sword, and knife. The two parts of the spear, blade (es sibil, sibilin) and socket (ol ñgorát, el ñgoratí), a blacksmith with his helpers should make in one day,

325
413

Fig. 26a. (1/1)

326 sword (ol além kitok, el aléma kirwa) and ax (ol dólu, el dóluo) in half a day, the other smaller objects, such as knife (ol alem), awl (ol dědŏ, el dědí), iron for cattle branding (ol měněrě, el měněrěn), arrow points (em bunid, m bunido), razors (ol mŏrŏnjĭ, el mŏrŏnjáni), tweezers for plucking the beard (ol budet, el budeta), in a still shorter time. As payment he receives for a spear two goats or an ox;
[435] for a sword, a large livestock-bell (eń gurugur, ń guruguri); for an

/115 cont./

326 ax or ten arrow points, a goat each; for the other things he is paid
[435] with milk. If the orderer furnished the iron wire, only half of the prices named is given as payment for the labor.

From thick brass and copper wire (os sojai, es soja; os sojai ebor, brass wire; os sojai ɛdó, copper wire) the blacksmiths draw thin wire. For this they use as tools the en̄ gâuo and the ol gamet̄. The former is an iron approximately a foot long (Fig. 26a), which is an inch thick in the middle and on both sides often tapers to points. In the center it has a few conical holes of different widths through which the wire is drawn. Not infrequently the en gâuo also consists only of a piece of strong sheet iron that /116/ is not pointed at the ends. The ol gamet̄ (Fig. 26b) serves as tongs and has the shape of sugar tongs whose grasping arms are squeezed together by an iron spiral
325 drawn around them. The drawing of small pieces of wire is done by hand, whereby one man grasps the en̄ gâuo, the other the tongs. For larger work the former with its two points is wedged into a forked

[413]

Fig. 26b. ½

wooden block, while the wire already drawn through is fastened to a roller resting on two forked branches. By a slow turning of it the wire drawing then proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The
306 spiral-shaped neck-ornament of the Masai women (es segengei e
301 murt), the double-spiral earrings of thick brass wire (es surudiai,
325 surudia) the women and old men, the arm and leg cuffs of iron
462 wire (es segengei, with designation of the part on which they are worn), as well as the tin ear-pendants (ol aimír, el aimér), are made by

829

1. When, after receiving news of an ugly misdemeanor or crime, I spoke to one or another more trustworthy Masai about the unknown culprit, often heard: It was surely not a Masai. A Masai would not do anything like that. Such things do not happen among the Masai.

Though he may know better, he accuses an ol mēgi just as unhesitatingly as he absolves a fellow tribesman (2).

[564]
[326]

2. It may be mentioned here that, according to my observation, the insincerity and dishonesty of the people belonging to the blacksmith caste are decidedly greater than that of the other Masai, so that it seems as if the contempt and bad treatment that the former experience from the latter have bred an inferiority of character in the course of the millenniums.

829 The mental superiority of the European inpresses him only in such cases where it has convicted him of some villainy, while his technical skills reek far too much of the despised "ol kononi" to the Masai to seem worth notice. It is solely the guns of the Protectorate Troops that obtain for the white man respect and influence among the Masai and have made this master race of East Africa somewhat more modest.

186 The picture becomes more gratifying if one observes the Masai
181 in intercourse with his own kind. Dobirá eñ gutok sidai el masai = make a good mouth toward the Masai, that is, be good, friendly, sincere toward your fellow tribesmen.

/214 cont./

628 682 [672] [593] revenge goes first against the murderer or, if he has fled and is not available, against his brother or any man of the family of the murderer. Usually blood revenge is commuted by composition (wergild), the amount of which the murderer negotiates with the avenger through a friend. As a rule it consists of 200-300 cattle -- [613] [614] now fewer in many cases -- which the murderer, together with his people and his fellow lineage and tribal members living in the vicinity, that is, in the same district, gather together. The avenger is free to accept or reject the composition. /215/ Blood revenge is not carried out longer than one or two months after the murder; composition then takes its place.

[598] The kraal of the ol oiboni is regarded as a place of refuge. If the murderer has confessed his deed here, blood revenge may no longer be carried out on him, though he remains obligated for the payment of the composition. Murder committed on a married man, a girl, or a woman is never expiated by blood revenge, but by a fine. Until the payment of the composition or fine the murderer is called [326] [564] ol oikobani (pl. el oikob). The murder of a blacksmith is unpunished. On the other hand, if a blacksmith murders or even only negligently kills a Masai, a band of Masai consisting of married men, warriors, and boys immediately sets out to kill several blacksmiths.

682 613 672 Negligent homicide is expiated only by fines. These are very minor if the perpetrator and the one killed belong to one lineage. If they belong to different lineages of the same tribe, every male member of the lineage (warrior, married man) and every married female member of the lineage must pay a cow. Of this livestock the brother of the one killed receives one half, while the other half [614] is distributed equally to his fellow lineage members. The fine is paid and distributed analogously if perpetrator and victim belong to different tribes. If a woman kills a man through negligence, she will also be killed in most districts. On the other hand, if a man has killed a woman, he either remains unpunished or is given a 682 634 184 beating by the brother of the woman killed. In a few districts no distinction is made as to whether the perpetrator acted intentionally or negligently, for example, in Loita, where blood revenge is also [672] [628] only very rarely used.

Asa

/255 cont./

XII.

Character of the Asá, compared with that of the Masai.

D 181 [186] In character the Asá in general greatly resemble the Masai, except that the tribal arrogance seems to be considerably lessened as a result of their poverty, though it still also always appears in their contempt of the el meg,[1] whom they call mondo. It is not possible to give a D [177] general opinion about their attitude toward Europeans, since they have actually come into contact with them personally only in exceptional cases and otherwise are acquainted with them only from the accounts of the Masai. On the whole, the Asá living independently stand out favorably from those who have joined the Masai, in that the former seem to be more modest and less crafty, whereas the latter are a match M D 648 for the Masai in audaciousness. The relationship of the two tribes to each other rests on the complete subjugation of the Wandorobo, who see in the Masai their masters and, in major legal disputes, also their judges.

M [326] [564] Exceptions to this are the Masai blacksmiths, who stand as low in the estimation of the Wandorobo as in that of the Masai. The ol kononi D [829] is also completely without rights before the ol doroboni. The Wandorobo appear peaceable toward passing caravans and sedentary Negroes. When D 648 they once shot at the former with poisoned arrows, without having been 181 attacked themselves, they seem /256/ to have acted in presumed self-defense; in any case one cannot accuse them of a lust either for war or D for murder. With these reservations, what has been said above about 181 the Masai holds concerning their character traits, their solidarity 171 against the members of all foreign tribes, the position of their women, [562] etc. Something new to be mentioned here is the custom that I found several times according to which a woman, just because of her inferior position, may not walk through a group of men.

D 576 In greeting, the Wandorobo use the same words and formulas as the Masai and accompany them with the same gestures.

171 The farewell of the one going runs aija matida. The answer to it, adi, is said to mean "go!" To the objection that this is not very courteous, an aged Asá replied: "We are poor people, when the visitor has gone we no longer need give him any of our food!"

1, [A Masai word meaning "the unbelievers"--Analyst]

/261 cont./

000 is present at all. The heir of the warrantor is also liable. The giver
D is offended by a refusal to accept a gift. A counter-gift of approxi-
431 mately the same value follows gift-giving. The giver spits upon the
0 gift when he hands it over. The Wandorobo never conclude into
572 blood friendships among themselves, but only -- and, to be sure,
very rarely -- with members of other tribes. The ceremony observed
D for this resembles the one described above among the Masai. If a
[197] stranger has bought ivory from him and paid only part of the price,
[426] the ol doroboni often likes to conclude blood friendship with him
because he thinks that then the debtor must die if he does not repay
the debt as quickly as possible (1).

D
[177]

1. This view is in general rare; it was not originally peculiar to the Asá, but adopted.

D
682 As among the Masai, the legal view makes no distinction between
628 murder and manslaughter, but indeed between the latter and negligent
[171] homicide. A murderer caught in the very act is subject to blood re-
[672] venge, for the execution of which every man belonging to the family
of the one murdered and in some districts also any of his friends and
campmates are justified. If the avengers do not succeed in capturing
the murderer on the day of the murder, /262/ the latter is safe from
blood revenge, for people see in the unsuccessful search for him a
command of God to let him live. To atone for his deed, however,
he must pay the principal heir of the deceased one large and two small
ivory tusks. Negligent homicide is punished by the payment of a
medium-sized ivory tusk. If the perpetrator and the one who was
killed belong to the same lineage, the punishment is considerably
D less than if they are from different lineages of the same tribe. On
[648] the other hand, if the two belong to different tribes, the ones entitled
to blood revenge often hand over the execution of it to the Masai,
who kill the perpetrator, even if they do not capture him until after
D several months. Up to the completed payment the perpetrator is
M regarded as puni-andet, corresponding to the ol oikobani of the Masai.
682 If an Asá kills a Masai blacksmith, the deed remains unpunished
648 because the blacksmiths are too weak for revenge and the Masai would
M
[664]
[326]

M /262 cont./
D never have anything to do with taking their part. On the other hand,
682 if an Asá is killed by a blacksmith, the Masai immediately place
648 themselves on the side of the ones injured and avenge murder, man-
M slaughter, or negligent homicide by murdering the perpetrator. The
[564] Wandorobo, to be sure, would themselves be in a position to execute
[326] the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D Bodily injury with a fatal outcome, if caused intentionally, is
683 regarded as murder; if negligently, as negligent homicide. Minor
[682] bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a fat-tailed sheep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished,
D as does indecent assault. Abortion is said to be unknown, and per-
[847] version not to occur. Kidnapping and sale are unknown.
[839]
[674]

A theft committed in the camp by an inhabitant or stranger is
D atoned for by the return of the stolen goods; that of a beehive hang-
685 ing outside the camp, with the payment of ten new ones. Anyone who steals honey from a beehive pays five beehives. Arson is said
D not to occur; one who is the cause of the illness of another through
683 sorcery is not infrequently killed, after he has been persuaded to
D charm the sick one back to health. The shooting of poisoned arrows
689 in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his campmates.

D Unknown are: aggravated kinds of death, the principle of repay-
681 ing like with like, compensation in the culpable body part, symbolism, imprisonment, enslavement, public punishments, the right of pardon.

For the inquiry concerning an unknown culprit, the injured one
D turns -- /263/ as has already been mentioned -- to a sorcerer, who
787 is also called ol goiatiki[1] among the Wandorobo. Instead of the manipulations with the en gidon, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1. [ol goiatiki is a Masai word also meaning sorcerer--Analyst]

/316 cont./

The Kenites of the Bible -- the Smiths of the Masai

*121 *171 • 326 564 The Bible mentions as the first blacksmith Tubal-Kain /Tubal-Cain/, the son of Lamech by his second wife, Zilla /Zillah/ (Gen. 4, 22). The name is made up of two words, the latter of which shall be discussed first. Kain /Cain/ is mentioned in two places in the Jahvist /Yahwist/ source: first Gen. 4, 2 as the eldest son of Adam and as the first tiller of the ground, and then in the same chapter, Verse 17, in the list of forefathers. In Gen. 5 the Priestly Document gives the table of the forefathers and in it calls Kain Kenan /Cainan/ (Verse 9), i.e., blacksmith. Now Kenan is the same word as ol konohi (pl. el konono) of the Masai or kinangodschant /317/ (pl. kinanodiga) of the Tatoga, among both of whom it also means blacksmith. The other part of the name, Tubal, we find among the Somal in tumál, among the Abyssinians in dubalanza, among the Galla in tumtu, everywhere with the meaning "blacksmith."

According to Gen. 4, Kain was a tiller of the ground and was separated from his people, like the first blacksmith among the Masai, who was also a tiller of the soil. The Masai despises the tiller of [829] the soil so deeply that it is entirely in keeping with his way of thinking when God takes no notice of Kain and his thank-offering of the fruits of the earth, even though Kain may otherwise have been a good man and not -- as the Jahve Document reports in Gen. 4 -- the first murderer.

The Jahvist /Yahwist/ calls the descendants of Kain /Cain/ Kenites (4th Moses /Numbers/ 24, 21, 22). We see from three passages in the Bible how low the Kenites stand in Israel's estimation. In Gen. 4, 11 the Jahvist relates that the curse of God is upon them when he describes how God curses Kain. In Gen. 15, 19 (Jahvist) the Kenites are mentioned as the first of the tribes that are to be destroyed by Israel, and in 4th Moses /Numbers/ 24, 25 /sic; see 24, 22/ (Jahvist) Bileam /Balaam/ sings: "but nevertheless Kain must be destroyed." Thus, everywhere hatred and scorn against the Kenites, the very same feelings that the Masai entertain against the blacksmiths, whether or not the latter practice their

/317 cont./

*12 *17 326 564 craft or are merely descendants of blacksmiths. The blacksmiths, because, through the making of knives and weapons, they lead to the transgression of the -- also existing in Israel -- divine command that prohibits bloodshed (1),

> 1. and also because they make plowshares. Ed. Hommel.

were regarded by the original Semites as not beloved, but rather condemned by God, and therefore as contemptible, disaster-causing, and unclean (2).

> 2. I see proof for the great age of this view in the use of the reed splinter mentioned in the eighth commandment of the Masai; cf. farther below /see p.328/.

Accordingly I suspect that the Biblical Kenites can not be regarded as a separate tribe, but that rather they are the descendants of the blacksmiths from the period when the Israelites were still uncivilized nomads, and that at that time the blacksmiths in Israel had the same low social position as today among the Masai and the aforementioned as well as other Semite peoples.

But now why does the Bible call the Kenites a separate tribe, why does it not call them a people of blacksmiths, and why does it nowhere say that the blacksmiths of Israel once occupied a low social position? Information on these questions is given in part by the Bible itself, in part by the observations that one can still make today among the Masai.

Let us first consider the first question. Like the Masai, the nomadic Israelites also had definite pasturing grounds within the boundaries of which they migrated about. If the grass had been grazed off in one spot, /318/ the huts covered with cattle skins were dismantled and one moved to a place not far away. In contrast to this, the blacksmiths continue to live in one place for a longer time, often even permanently, as long as warlike events do not force them to flee. Their property in livestock is usually small, for, as soon as it becomes larger, the

/318 cont./

*121 *171 • 326 564

nonsmiths, by right and custom, take from the smiths the principal part of it by force. The grazing in the vicinity of their kraals is not disputed with them, the shunned ones, by anyone and therefore suffices throughout the year for their few head of livestock. But then the smiths are also tied to certain places, namely, to such where ferruginous sand and wood, the latter for the making of charcoal, are found. Since these requirements are present only in relatively few places, colonies of blacksmiths arise. Their usually small property in livestock soon makes them dependent on agriculturalists, among whom they must buy vegetables (1).

1. and whom they in return supply with plowshares. Ed. Hommel.

If, however, such are not in reachable proximity or if their own fellow tribesmen prevent the selling of smithy products to sedentary tribes, the blacksmiths perforce begin to plant the soil themselves to a limited extent and in this way also become agriculturalists. This semisedentation detaches them from their own people even more than they were already separated by the aforementioned contempt. If then war or famine, for example, through drought or livestock epidemics, comes in addition, the blacksmith colony may be completely cut off from its own people. Thus it may have happened, when the Israelites were driven into Egypt as the result of famine, that the semisedentary smiths remained behind. Now the latter, through a closer connection with the agriculturalists, perhaps in southern Kanaan /Canaan/, or through the fact that a foreign tribe forced them, through friendship or war, to settle among them, and as a consequence of the mixing through intermarriage made possible by that, may have developed into a separate people or have been given, in the eyes and minds of the Israelites coming into contact with them again after about 500 years, the physiognomy characteristic of such a people, which caused them to call them Kenites. This surmise, however, is justified only if one may assume that the Israelites were already acquainted with the "Kenite people" upon their return from Egypt, and -- which leads to the same result

18: Merhar--427 G-5 (1895-ca.1908) 1910 FL12 Masai FL12

*121
*171
• 326
564

here -- the former smiths had been taken in by peoples who gave them, the blacksmiths, their daughters as wives. I am inclined to doubt the latter on the basis of my observations of the African peoples stemming from Arabia. But the fact that the former assumption too is scarcely tenable seems to follow from the strong anger of the Jahvist /Yahwist/ against the Kenites, for they are the one whom he, above all heathens, especially condemns with eloquent words. One would thus come to the assumption that the "Kenite people" may not have originated until later, and, to be sure, not long before the drawing up of the Jahve Document, and that furthermore the former /319/ blacksmiths of the Israelites may have kept themselves quite free of mixture with foreign blood. Then one might suspect, in order to explain why the Bible describes the Kenites as another people, that the Israelites were already heavily mixed at the time of the origin of the Jahve Document. This conjecture would be in agreement with the Biblical accounts and would be further supported by the fact that the author speaks so forcibly against mixture with the daughters of the heathen and even cites this circumstance as the reason for the deluge. But we probably do not need this conjecture either, for the Bible means by an alien people, not another political community or a society of human beings formed differently somatically, but primarily people whose cult was incompatible with that of the Israelites.

The second question, as to why the Bible does not designate the Kenites as a blacksmith people is explained in part by what has just been said, through their sedentation they had precisely in general exchanged the craft for agriculture, and in part it comes from the following.

Now why does the Bible nowhere directly state that the blacksmiths were regarded as a low caste? Though, according to the above, it is not probable (1)

1. This question becomes even more improbable because of the great infrequency of the insignificant finds of iron throughout in ancient Egypt, even if its dating for the Old and Middle Kingdom is corect.

/319 cont./

#121 that part of the blacksmiths moved to Egypt with Israel, the possi-
#171 bility that this nevertheless might have been the case should not be
• 326 excluded either. Now how would these blacksmiths have fared then?
564 If we assume, with the Bible, that at that time the Israelites were a pious people and were reduced to servitude by the Egyptians, either of these circumstances could then have sufficed, in the course of their long captivity, to remove in practice the ancient prejudice against the blacksmiths and to unite firmly the fellow believers as well as the fellow tribesmen. There still remains another possibility, however. If we assume that the latter did not happen and that at that time, just as, correspondingly, is the case even today among the Semite peoples of the interior of Africa, marriage between relatives of smiths and nonsmiths was not permitted, it would have become imperative for the smiths, employed in various localities on account of their skill in making weapons and separated from one another for the hastening of permanent sedentation in the land, to merge with the Egyptians through mixture with them. If there arose through that a shortage of smiths for the Israelites, this could have been remedied by having people from families who did not originally belong to the blacksmith caste learn the craft in Egypt and practice it there as well as later on. By analogy with the Masai, such people would not sink in the public esteem by practicing the blacksmith's calling. But even if I assume that a part of the smiths /320/ returned from Egypt with Israel, their social position must have become better, conditioned by the shaping of the religious cult, in the service of which the smith placed his craft for the making of vessels and other implements. He whose duty was the outfitting of the temple could no longer have remained a despised, shunned, unclean man.

If, therefore, the Old Testament nowhere directly states that
[783] the blacksmiths made up a lower, a despised caste, in my opinion in its oldest part it nevertheless still contains reminders of the fact that the blacksmith was also regarded as unclean by the Israelites in antiquity.

/320 cont./

*121 *171 • 326 564 783 If the blacksmith is unclean, then so are the objects that he touches, especially the ones that come from his hands as products of his skill. Now, since the blacksmith's products are indispensable in daily life, people help themselves by means of a purification ceremony. The Tatoga as well as the Irok man dips a new object fetched from the blacksmith's workshop into the water of a distant brook and at the same time washes his hands. The Masai smear with fat the things coming from the hand of the smith -- spear (blade and shoe), sword, knife, razor-knife, ax, sewing awl, pincers, arrow points, branding iron, cowbells, large and small leg-bells, as well as various ornamental objects -- and likewise their hands, which touch these things -- in order to remove from them the uncleanness adhering to them from the blacksmith. I do not know whether the ancient Israelites had a similar custom, but I deem it likely.

What seems adequate for secular life need not suffice for the religious cult; on the contrary, it may be assumed from the first that people are more sensitive there. Thus, in place of the iron knife, the Masai used a reed splinter for cutting the umbilical cord of the newborn child, in accordance with their eighth commandment. Now a number of Biblical passages that tell of the oldest period of Israel, the time of the nomadism, also speak of the use of the stone knife and others of the prohibition of the iron knife for cult purposes. Thus we read in the 4th chapter of the 2nd Book of Moses /Exodus/ in the 25th verse: "Then Zippora /Zipporah/ took a sharp stone and cut off the foreskin of her son." And in the 5th chapter of the Book of Josua /Joshua/, Jahve /Yahweh/ commands the latter: "Make thee stone knives and circumcise again the sons of Israel for the second time. Then Josua /Joshua/ made him stone knives and circumcised the sons of Israel at the hill Araloth." We find the interdict for the use of the iron toll in the 20th chapter of the 2nd Book of Moses: "And if thou wilt make me an altar of stone, thou shalt not build it of hewn stone: for if thou lift up thy tool upon it, thou hast polluted it (1)."

1. This order has been interpreted that the natural, original character of the altar would

/320 cont./

#121

564
783

/footnote 1 continued/ make it particularly worthy of God. This assumption is untenable, however, in view of the specific order concerning the arrangement of the tabernacle and the temple, the artistic furnishings, the sumptuous priest's clothing with the breast shield studded with precious gems," etc.

Here it is /321/ therefore directly stated that the stones will become desecrated through being hewn with iron tools. Circumcision and altar, however, are the oldest and at the same time the most important arrangements of the Israelitish cult. Just as the stones of the altar were not to be made unclean by contact with the chisel rendered unclean by the blacksmith, so also the use of the iron knife for circumcision, through which, indeed, the Israelite was precisely to be purified religiously, had to be forbidden (1).

1. Even in ancient Egypt the blacksmith's product appears -- traditionally, consciously or unconsciously -- to have been regarded as unclean: one opened the abdominal cavity of the deceased with a stone knife for the purpose of embalmment.

It is to be particularly noted here that, of the three Biblical passages drawn on, the first two belong to the Jahvist /Yahwist/, the last to an elaboration from Jahvist and Elohist. But the Jahvist -- as I have already mentioned above -- is the one source that above knows Kain /Cain/ and the Kenites as well as the connection between the two and is also considered the oldest of the ones worked together into the Pentateuch. I believe one may conclude from this that the sources upon which the Jahve Document is based would have known about the uncleanness of the smiths, which would furnish proof for the existence of this view in ancient Israel.

/321 cont./

*121 *171 • 326 564 [183]

That it was subsequently lost is sufficiently explained by the fact that the Israelites settled down among non-Semitic peoples by whom the blacksmiths were not regarded as unclean and among Semitic ones who, through the influence of the others, probably likewise were no longer familiar with it, as well as further through the influencing that their psyche underwent through the immediate and subsequently permanent mixing with these peoples. With the loss of this view, there was also lost the fear of the use of the iron knife for circumcision, but, on the other hand, the altar was erected out of unhewn stones even in the Makkabäer /Maccabean/ period (1st Makk. /Macc./ 4, 47), but only because this was expressly commanded in Mosaic law (2nd Moses /Exodus/ 20, 25), whereas nothing is contained in it about the use of the stone knife for circumcision.

Now if the Kenites are the descendants of the blacksmiths of the Israelites from the pre-Egyptian period, i.e., from the nomadic period of Israel, their dispersal at Sinai, in Kanaan /Canaan/, among the Amalekites and Midianites is explained by the fact that they, as among primitive peoples still today, so at that time also among civilized peoples, as makers of weapons, always are and were the most valuable prisoners of war. The Bible also gives the information that this prevailed in the wars against Israel. According to 2nd Kings 24, 14, all the smiths of Jerusalem were captured by Nebuchadnezzar, and, according to 1st Sam. 13, 19, all the smiths of Israel were led off by the Philistines.

Since the other Pentateuch sources are no more familiar with Kain /Cain/, or a personality corresponding to him, as the first murderer than the myth of the Masai is, /322/ and since furthermore it does not in the least fit in with the sphere of thought of a primitive people to picture the eldest son of the first human couple as the murderer of his brother and hence as an obstacle to the rapid increase of human beings on earth, I suspect that the Jahvist legend of Kain's murder of his brother did not originate until a later time. In the advanced Israel, with its more highly regarded smith, there could no longer be any place for the traditional contempt of the Kenites. One needed another reason in order to represent as contemptuous

/322 cont./

#121 #171 • 326 564

and wicked the fellow tribesmen reared in heathendom, who, through their tribal affiliation, were especially likely to introduce heathen influence and heathen vices into Israel through intermarriage. In addition it seems natural if among a people that, even in the state of culture-poor nomadism, had a deeper religious feeling there was formed a legend that was suitable for interpreting the Kenites as descendants of a tribal ancestor cursed by God for the gravest crime. Such a legend could arise all the more easily since -- as I have already said above -- the smiths were regarded by the original Semites as leaders toward the transgression of the divine command against bloodshed, as not beloved by God, and therefore as contemptible and unclean. In the early Semitic view the smiths were condemned as leaders to murder, in the Bible Kain /Cain/ is condemned as a murderer himself.

The Deception about the Right of the First-born

#773 #539 #171 #121

In the days of the El dertim, the myth of the Masai reports, there lived a man named Narabá. He had a son who was given the name Mutari because he was born toward sunset. When Mutari grew up, he married the woman Nastígoi, who was named after the bush e' nasegó, because her mother, when she bore the child under her heart, wanted to eat nothing but the roots of that bush. When Nastígoi became pregnant, she carried triplets, and when she gave birth, only two children came into the world at first, two sons. The one born first was already very hairy on his body and also already had a beard, which was why he was given the name 'L ol munjoi (= the bearded one). The other one was called 'L en jergog, because, soon after birth, his mother wrapped him in soft, undehaired calf-leather (en jergog). Not until three months later was the third child born, also a boy. He was given the name Ndarami = the tarrier. Whereas the excessive growth of hair of 'L ol munjoi increased considerably with age, 'L en jergog had only a very sparse beard, and Ndarami remained completely beardless. One day, when the old father was very ill, the two older brothers went to a supplication feast that was being celebrated in the vicinity, in order to ask God

/323 cont./

*539 the herder's staff and the bow and instructed them about the use of
*773 these things. Then he commanded them to cover their eyes with
*171 their hands. When they had done this, God held aloft the herder's
*121 staff and asked which of them wanted to have the thing held aloft.
829 One of them peered through his fingers, recognized the herder's staff, and quickly answered in the affirmative. He became a cattlebreeder, while the other one, who had held his hands tight over his eyes and had seen nothing, became a poor hunter (2)."

[326] [564]

2. At a later period, when the original reason for the scorn of the smiths had fallen into oblivion among the Masai, this story was amplified so that the smiths too were included. God then held three things in his hand: the herder's staff, the bow, and the hammer. Upon the question of God, the one who later became the Masai chose the herder's staff; the second, who here too peered through his fingers, but was shier than the first, chose the bow, so that for the last one, who had seen nothing, only the hammer remained. Both this story and the one above exist side by side among the Masai today.

*539 /324/ I hardly believe that I shall go wrong if I assume that, in
*773 place of the one story contained in the Bible, the Israelitish fund of
*121 myths originally knew two, which, in their basic features, corre-
*171 sponded to those of the Masai, and one of which merely represents a reproduction of a historical episode, while the other bore the character of a religious myth. That this character was preserved in the later joining together of the two accounts is shown by the Biblical interpretation, and, to be sure, most clearly by that of the Jahvist /Yahwist/ (1).

1. Gen. 25, 27 to 34 belongs to the Jahvist.

561 class name, and is allied with the next (or previous)
701 group, the first being the right hand grade and the other
[881] being the left hand grade. After several years the
[884] junior warriors go through another ceremony and become
full warriors. Their total period of warrior duty may
714 be about 15 years. The warriors are distinguished by
their hair style and spear.

714 The hair style involves a complicated
302 plating of the hair with some combination of cords,
pieces of hide or gut, bark, or stick; all liberally
plastered with sheep or cow fat and red ochre. Elliott
(1948) has detailed the methods and materials used and
variations in style between areas.

714 The warriors' spear is often over five feet
411 long. It has a long, narrow, double-edged blade, an
equally long but round and pointed tail, and between
them a very short wooden hand grip serving as a shaft.
Warriors also carry a flat, double-bladed long knife or
short sword called a simi. These useful weapons are
177 carried at the waist in a red leather sheath. Originally
411 the metal weapons were produced by metal-working tribes.
• 326 They now come from England and the first thing a moran
does after buying a spear or simi is to file off the
411 brand name. When in ceremonial dress or at war the

MASAI FL12

M 301 321 [304]

EAR-STRETCHER. An oblong block of wood, grooved, and buttoned in the widely-distended ear lobe.

Length, 4½ inches; width, 1½ inches; thickness, 1½ inches.

Masai tribe; Mount Kilima-Njaro, East Africa. 151239

C 301 321 326

EAR-RINGS. One made of wood, wrapped with copper wire, and having two pendants of iron chain. The other is only a plain piece of horn, shaped for the framework of an ear-ring.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151234

EAR-RING. Of horn, with wrappings of beads, and fringe or tassels of iron chain.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151233

EAR-RING. Made of a quill, cut and bent into a loop at the upper end. At the lower end hangs a pendant of iron wire chain of native manufacture, so fine and neatly made as to resemble machine work.

Wa Chaga tribe; Machame district, Mount Kilima-Njaro, East Africa. 151235

EAR-RINGS. Coils of iron wire served at the ends with fine copper wire. Fringes of iron chain hang down from the coils. Worn by men.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151563

EAR-RING. Coil of wire, one turn at each end wound with fine copper wire. This coil is worn horizontally and from it depends a fringe of very fine iron chain, each strand spaced off at the top with a blue bead.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151564

EAR-RING. A worn and broken specimen of the same style as the foregoing.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151565

EAR-RING. Wooden ring and fringe of iron chain. Fastened in the ear by means of a stick run through the ring behind the lobe of the ear.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa. 151566

EAR-RING. Staple of horn, to one prong of which is attached an iron chain with amulets of cow's bone. Worn by men.

Wa Chaga tribe; Kahe district; Mount Kilima-Njaro, East Africa. 151567

M 301 [326]

NECKLACE. Made of beads and brass wire on leather base; projecting ornament on the edge of the rim, made of a polished disk of shell; pendant, a fringe of small chains.

Merker phot.

Ill. 5. Kraal on the steppe between Kilimandscharo and Meruberg.

342 out of material available everywhere. Like every task in the
[462] kraal, hut construction is the duty of the women. After the site
for the individual hut (Fig. 3) is cleared of grass and brush and
then leveled, the spiral-oval ground plan is undertaken in that
the woman scratches it on the ground with her foot. They do not
[804] use any auxiliary means for measuring it; measuring by eye is
sufficient for the woman who, even as a child, helped her mother
with this work. Into the ground plan, at foot-long intervals, poles
342 (ol ōmi, el ōm) about 1 1/2 meters long are stuck in the ground
• 335 and joined lattice-like with thumb-thick cross-switches (ol gereni,
el gerenen). Then in the longitudinal diagonal seven to eight
supports (em bogischi) are dug in, over which a longitudinal bar
(ol ereschena, el ereschenan) is put from one end of the hut to the
other. Over this the poles are arched and the opposite ends lashed
[284] together with papyrus grass (es sedja). By interplaiting finger-
[824] thick switches (en jaschoi, n jascho) walls /24/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters
high, 4 to 5 meters long and 3 meters wide. Neats' skins served
[237] principally for roofing before the rinderpest raged among the
[731] livestock around the year 1890. Now, /Figs. 2 and 3 appear here/
[824] when the Masai herds have become vanishing small in contrast
to former times, the switch framework is first packed with a
[237] layer of dry, long-bladed grass (ol gudjeda or ol godjeda) 15 to

FL12 Masai FL12

101 claim to belong to them live elsewhere. Merker gives as the
634 principal divisions three provinces, Kisongo, Loita, and
101 Olbruggo. This is perhaps not according to Masai traditions,
634 but is not incorrect as a practical description of the present
635 distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there
614 are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

561 According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first
[304] stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circum-
561 cised about the same time (see p. 261 for details) are said
884 to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the
[302] Invincibles.' After circumcision the warriors plait their
[291] hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis),
[262] go absolutely naked. They subsist entirely on meat, milk,
[276] and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in
● 342 separate kraals with the immature unmarried girls, with
836 whom they are allowed to cohabit freely. Tradition[1] (see
561 p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when
[177] the Masai kept to themselves. Now that they have come
764 into contact with civilization, prostitution and venereal disease
[548] have become deplorably frequent. About the age of twenty-
561 seven or thirty, or nowadays when raiding is forbidden
885 somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar
[171] customs of free love.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they saddle their donkeys with skins and pack-saddles in which they put their gourds, and the women carry bags.

Should they stop in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ngobori, i. e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They procure poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from trees; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

'Manyat oo 'l-puli loo-'l-muran loo-'l-Maasae.

Masai warriors' kraals and slaughter-houses.

Masai warriors do not live in the kraals of the married people; they have their own kraals, where they dwell with their mothers and lovers.

When they go to the woods to eat meat, they live in the slaughter-houses[1] with their boy-servants.

[264] [1] Meat may not be eaten in the manyat, or warriors' kraals, and special places, called il-puli, are erected in the woods, to which the warriors retire when they slaughter cattle.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 175 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the boughs. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 844 [352] 844 342 [237] [361] [364] 844 [351]

844 the hut were gathered together the gossips of the kraal,
[415] mingling, so far as space permitted, with calves and goats. A number of large calabashes lay in one corner, and a coarsely-made earthen cooking-pot in another. Fleas in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which pertinaciously would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on
[842] the part of the mother, who heard with deep pleasure that her offspring was a boy. Girls are sadly at a discount among the Masai. They would always prefer to have boys, but happily nature sees ahead a little, and takes care that a fair

[133]

MASAI KRAAL, DONYO LONGONOT IN DISTANCE.

supply of girls is provided. As there is no registrar or birth
846 column, I am totally unable to state when our hero first saw the light. That, however, is a small matter. No particular
852 ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly ensconced on her back beneath the bullock's hide which formed the mother's garment.

855 Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew space. Getting above mother's milk, he was soon exercising his incipient teeth on a huge chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

elephant is attacked at close quarters, the arrow part driven into the great brute, and being loosely fixed in the handle, it remains when the latter is withdrawn. Another arrow is then affixed, and the same operation performed. It is said that an elephant will live a very short time after being thus stabbed, and entire herds are killed without one escaping, so dexterous and daring are these hunters. The Andorobbo also use the ordinary bow and arrow, but only for the smaller game.

CHAPTER XI.

THROUGH KAVIRONDO TO VICTORIA NYANZA.

THE people (Wa-kwafi) of Njemps presented an interesting study to the observer as throwing light upon the origin of the various small tribes which people Africa. Unquestionably Masai in race, and only separated from that tribe through the loss of their cattle and the consequent necessity of breaking their cherished convictions by cultivating the soil, they had developed new ideas, manners, and customs in a comparatively short period.

M 101 184

They did not by any means supply an argument in favour of the vegetarians; for in personal appearance they had distinctly degenerated, and could not for a moment compete with their aristocratic carnivorous brethren of Lykipia. This was especially noticeable among the women, who had lost their slender, *genteel* shape and acquired the ill-proportioned, unwieldy contour of the negress. Perhaps an exception might be made in favour of the young women, many of whom were well-formed and characterized by most pleasing and interesting manners.

M 142 184

The colony consisted of two villages—Njemps of Guaso Tigirish, close to our camp, and Njemps of Guaso na Nyuki. The houses were of the haycock order, with floors beneath the level of the ground, very small and badly built. They were surrounded by a double fence of thorns, which, however, are a greater source of danger than of protection, as in this dry climate they become like tinder, and consequently can be set on fire easily. If this were done at several points simultaneously, the inhabitants could easily be burned to death.

M 361
M 342 351

In a hazy sort of way they tried to keep up the distinction

Kenya

Before dealing with the subsequent procedure, after a girl has promised to visit a warrior on a given night, it is necessary to outline the sleeping arrangements and accommodation in a *manyatta* hut. The hut is not divided off into rooms in any way, and at one end of the hut is the bed upon which the woman (mother of one of the warriors) to whom the hut belongs, sleeps with her younger children. At the other end of the hut, not screened off in any way, is the bed upon which the warriors and girls sleep. No warrior may ever sleep upon the married woman's bed, but the woman's husband can come down and visit her whenever he likes, and when he does so, no warriors or girls may sleep in the hut. Ordinarily, however, the woman's husband does not live at the *manyatta*, and she and her small children sleep on her bed at the one end of the hut, while the warriors sleep on the bed at the other end of the hut with the girls. No warrior ever sleeps in his own mother's hut, but always in one of the other huts if he has invited a girl to sleep the night with him. When, therefore, he has arranged for a girl to visit him at night he goes in the evening to one of the other huts and arranges to sleep on the young people's bed there. He then sends a message by the woman who owns the hut to tell the girl that he is sleeping there so that she may come to him. There is absolutely no objection to several men coming in this way to the same hut, and sleeping on the same big bed each accompanied by his girl. In fact, it is considered wrong for a warrior and a girl to have sexual intercourse unless there are also other couples sleeping on the same bed. Moreover, besides those men who have come to the hut and sent for their girls to join them there, there are usually several younger girls, daughters of the woman who owns the hut, sleeping on the bed too. These young girls, too young as yet to sleep with the men sexually, nevertheless, sleep on the same bed as the warriors and older girls, and thus grow up steeped in the customs of the *manyatta*.

836 561 513 [342] [352] [833]

It is exceptionally difficult for a European to understand all the full details and facts concerning native sex life, but the following facts have been noted and verified for the Masai. No girl may sleep with a man except she be absolutely nude, but on the other hand, although by tradition and by etiquette she may not refuse an invitation to sleep with a man (except for the two reasons already given above), she is not necessarily expected to allow him full sexual intercourse, and, in fact, often does not do so. Thus—strange as it may seem—Masai girls do sometimes go to their husbands as virgins in the physical sense of the word (*see* Marriage), although they may have slept with men in the *manyattas* countless times. Usually, however, Masai girls have no objection to full intercourse except during the first four or five days after each menstrual period (*see* Girlhood), for the Masai firmly believe that conception cannot occur unless intercourse takes place very soon after menstruation, and four to five days is considered an absolutely safe margin. Moreover, this belief seems to have a strong foundation in fact, and it thus raises a very interesting point for physiologists as to whether this is as true of primitive peoples as it

Ol Oilokurukur = The Thunderer and 2nd month ditto.
Ol Oirujeruj = Light showers and 2nd month ditto.
Ol Tumuri. Meaning unknown and 2nd ditto.
Ol ol Aibor Ari = The month of the white water

The following are the days of the month :—

1. *Ol Kardet* = Full moon.
2. *Ol Oinyori* = When it rises green.
3. *Ol Onyuki* = When it rises red.
4. *Esobieh Naiturugu* = The beginning of the wane.
5. *Esobieh il Giporoon* = They wane the scars (?).
6. *Esobieh e Nadarhas* = The red wane (?).

The other days are not named. But one may refer to a day as, for example, "the eighth day of the moon," that is, counting from the time when the old moon disappeared. The dark days between old and new moon are called *Enaimin* = the darkness.

FIG. 2.

Hut-building.—The Masai frequently move from one place to another in order 361
to seek the best grazing and water for their cattle. They are therefore constantly deserting old villages and building new ones. If time permits, after the day's march 342
is over and before darkness sets in, each woman sets to work to build a hut, even if it is only to be occupied for one night.

She first cuts a number of straight sticks about 5 feet long and brings them to the place where she wants to build. She takes six of these sticks and marks out an oblong about 5 feet by 8 feet with them and places little blobs of cow-dung (*Emodio*) round [237]
it at 9 inches or 12 inches interval (Text-fig. 2). She then drives a hole in the ground through each blob of cow-dung to a depth of 12 inches or so with a pointed stake called *Enaunir*. The cow-dung lubricates the point of the stake and makes it easier to pierce the ground. The holes slope slightly outwards from bottom to top. She then drives an upright into each hole, after which she binds the tops of the uprights to a pliant wand which runs all round horizontally, leaving every fourth or fifth upright unbound.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

342 Pl. XV, Fig. 1 shows a woman who has put in the upright sticks and bound them with wands on the side furthest from the camera.

[239] She then passes ox hides between the fixed and the free uprights on three sides to form walls. She leaves the fourth side open at first, but later closes it with a screen called *E-Sos*, which divides the calf pen from the place where the people sleep. *E-Sos*

FIG. 3.—GROUND PLAN OF TEMPORARY HUT.

FIG. 4.—GROUND PLAN OF FINISHED HUT.

is made of split bamboo tied together with cord, and may be seen in front of the woman in Pl. XV, Fig. 3.

The hut walls of hides are shown in Pl. XV, Fig. 2. Sticks are then tied across the top from one side to the other. They bend convexly upwards in a slight arch, and skins are laid over them to form a roof. Pl. XV, Figs. 3 and 4 show huts which

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

are ready for one night's occupation. Text-fig. 3 shows its ground plan. It takes 342
two to three hours to build. If it is to be occupied for some time the walls and roof are strengthened and the hides are gradually replaced by cow-dung plastered on a backing of *Leleshwa* leaves or other suitable vegetable material. The whole, including the calf pen, is enclosed and roofed with cow-dung plaster. A small hole (*E-Lusye*) is usually made at the top of the wall above the fire-wood store to let out some of the smoke. The beds (*En-Dabash* or *E-Ruat*) are made of hides put on top of poles 352
placed close together and raised about a foot from the ground. Text-fig. 4 shows the ground plan of a finished hut.

Grass tufts on the floor are just left to dry up and get trampled out of existence. 342
Repairs are done by the women of the house, and consist in filling up cracks with [356]
wet cow-dung. Fleas, bugs and rats are uncommon in Masai huts. Dried puff-balls [951]
and dry cow-dung are sometimes burnt as an insectifuge. The young people are 515
not infested with body lice; but these abound on the aged, taking refuge in bead necklaces and other ornaments.

When the people move on the village is usually left to fall into ruins, but it 361
may be reoccupied later if desired, and if it has not yet fallen beyond repair.

FURTHER NOTES ON THE MASAI.

[P. 466-C]

13:Huntingford E-4 (no date) 1953 FL.12 Masai FL.12
Institutional Hist

In 1932 the Il-Tiamus numbered about 2,200 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Laimber section called Il-Dalgin, they have admitted a variety of refugees including Kamasys, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokwa Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Mpunga Kokwa" and "Mpunga Nokoyo" in the Tigilah valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled graaches are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *emasie* and other ceremonies, and practise the "free-love" system of the pastoralists, though without the *moryatan*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Okiomp to become cattle people again. In the time of Thomson and Teleki, however, Mpunga was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (or ways of three to four miles square) which were intersected by irrigation channels bringing water from down across the river Tigilah. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[29] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of Suk and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Okiomp.[30] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelubu blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Baatta stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Parangeya in Southern Masailand are also to be classed as agricultural Masai.[31]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-eyioni*. At circumcision[32] he enters an age-set and becomes a warrior, *ol-murani*, "one who is circumcised," and may associate with uncircumcised girls. At the *ol-peker* ceremony he becomes an *elder*, *ol-murua*. Warriors may marry when they become senior warriors. After the *ol-peker* the newly made elders attend to their family concerns, and get wives

[30] W. E. Dyson and V. E. Fuchs, "The Elmolo," *JRAI*, 1937, LXVII, p. 327; von Höhnel, II, pp. 196-98.
[31] The people known as Wakiwa in northern Tanganyika are not Masai, but people of Baatta stock who have imitated them.
[32] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 15-17 years; Fadiman gives the lower limit as 16 or 17.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

631 chief; but in that year it was recognized that he was in fact no such thing, and the
648 native administration was reconstructed with 14 Native Councils, one for each division (Il-Purko, Il-Damat, etc.), to replace the original council of the *ol-oshe*. These Councils were composed of *il-aiguenak*, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 46 headmen, some of them *il-aiguenak*. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled chiefs) and sub-headmen.

In Tanganyika, the laibon was at first regarded as the head of the Kisonko; but since this recognition proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid headmen.

MAIN CULTURAL FEATURES

CRAFTS

Housing

342 The Masai hut, *esh-aji*, pl. *ish-ajijik*, is a low structure with a flat or flattish
361 roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather hides are laid on top to keep out the rain. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The huts of the agricultural Il-Tiamus have thatched roofs of the normal East African pattern (p. 111). A temporary skin hut called *ol-gobor* is used for a temporary halt where pasture is poor.

Dress and Ornaments (Traditional)

714 Warriors wear a small calf- or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a head-dress of ostrich feathers or of lion-skin, a cape of vultures' feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece
[301] of goat-skin fastened to the belt. The distinctive warrior's ornament is the horn arm-clamp called *e-rrap*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-toros* is worn by warriors on certain occasions: Hollis says when going on a raid after electing an *ol-asmoni* (*ol-otuno*); John Tombo ole
291 Mbaei, when they go on a raid after making a vow to conquer or die. Elders wear
[556 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys wear a sheepskin.

301] Married women wear a skin cape and a skin skirt held in place by a broad belt.
291 They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and from knee to ankle. All married women wear flat discs of coiled
301 iron wire, *i-ewutia*, hung by straps from the ear-lobes (like the Nandi *tasok*), and some wear wide collars made of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

561 **The 'E-Unoto' Ceremony of the Masai.** *By Lord Claud Hamilton. With three text figures*

135 The cycle of ceremonies connected with the forming of a Masai age set starts with that known as *em-polosata*, performed by the members of the age set immediately senior to the existing warrior set. These members are destined to become the instructors in tribal lore of the youths who are about to comprise the new age set. *Em-polosata* is followed by *en-dungure* which marks the end of the current circumcision. These two ceremonies are followed by a four-day dance of the initiates-to-be [535] called *en-hipata;* and the circumcision of the new age set is carried out over the next three to four years, the youths being 14–17 years of age. Each generation is divided into Right Hand and Left Hand circumcisions; the latter begin their ceremonies about six to seven years after the former, but both cease to be warriors at the same time.

Seven years after the beginning of their circumcision, the members of the Right Hand Circumcision become senior warriors through the *e-unoto*. This ceremony, which is part of the age-set institutions, is held about every seven years, when an age set of junior *muran* (warriors) feels that it is sufficiently strong and mature to graduate into senior *muran*, and so 'push' the next senior warriors of the previous age set up into adult manhood. The word *e-unoto* is derived from the verb *o-un*, to plant upright or set up (*i.e.* a new age set of senior warriors is 'set up') and, as will be seen below, certain things are ceremonially 'set up' in the *manyata* (warriors' kraal) where the ceremony is held.

Tribal elders choose a site for the ceremony, and there the *muran* who are to take part, aided by their mothers and girl friends, build a new kraal. Each young man has his own hut, a long, low building of withies, mud and cow dung. These are built in a circle, facing inwards. At night branches are pulled into the gaps between the huts to keep out wild beasts which might prey on the cattle sleeping in the arena encircled by the huts. [342] [361]

Besides choosing the site, the elders also select 49 *muran* from those about to take part in the ceremony. These 49 'pure ones' as they are called must be young men of good character, 100 per cent. full-blooded Masai and without physical blemish. Their leader, the *Ol-Otuno*, is chosen secretly and is not told of his appointment until the ceremony is due to start. Every *murani* dreads being called upon to fill the position for the *Ol-Otuno* is regarded as a scapegoat for the misdeeds of his fellows. They believe that if he dies young as a sacrifice for their sins, they will live long and prosper. [183]

After the other huts have been built, the mothers of the 49 'pure ones' build the sacred hut called *O-Singira*. This is a round building, also made of branches, mud and cow dung, topped with a conical roof of the same materials. Around its base is laid a circle of bullocks' skulls on which are left the horns and a strip of skin running down the face. Inside, in the centre of the *O-Singira*, the *Ol-Otuno* 'sets up' a stick of the wild olive tree (*Olea chrysophylla*) and so receives his name which means 'He-who-set-it-up.' The doorway of the *O-Singira* faces that of the *Ol-Otuno*'s hut, next to which is that of his assistant known as 'The Cutter-up of the Hide.' [346] [239]

The *e-unoto* of the Loita division of the Masai was held on 10–13 June, 1959, at Entasekera in southern Kenya. The youths taking part were of the right-hand circumcision, the members of which are known as *Il-Deregeyani*.

561 The ceremony lasts for four days, and the first of these is called 535 'The Day of the Red Dance.' As dawn breaks, all the people assemble outside their huts facing east. Four elders chant a prayer

/22 cont./

613 Masai, is foreign to them. God rewards them for their virtue by
[157] protecting their herds against predatory animals and thieves. It is
not supposed to have yet happened that one of their cattle was
613 killed by a lion or otherwise stolen. The El kiborõn are particularly
789 esteemed by all the other Masai on account of their ability to cause
821 rain. The author one day saw such a rainmaker at "work" near a
Masai kraal. He was lying on the ground under a big leather apron
such as is worn by old men, so that one could see only a slight
movement of the arms and now and then hear a soft murmur. After
a while he stood up and explained that rain would "soon" come.
Since I had had rain during the preceding night in the camp six
hours away, it is very probable that here, too, it had not failed to
appear for very long and thus saved the reputation of that rain artist.

613 The only slight differences in the customs of the El kiborõn
lineage compared with those of the other lineages will be discussed
in the individual sections.

family kraal. -- Daily life. -- Work. -- Foods. -- Tobacco. --
Honey beer. -- Play. -- Household equipment.

361 In the vicinity of a few shade trees and a small brook the Masai
villages lie scattered in the burning hot steppes. They are circular
kraals (eṅg ãn, ṅg aṅfti or eṅg anása, ṅg anás [Fig. 2]), which
are formed by a ring of huts (eṅg adji, ṅg adjidik) built close to
one another. A kraal contains 20 to 50 huts. At two places
opposite each other are found the entrances (eṅ gischomi) three to
342 four meters wide. Since the Masai, as nomads, continue to live
361 in one place only as long as they have good pastures for their live-
stock, the huts are /Ill. 5 appears here/ built easily and casually
out of material available everywhere.

/23 cont./

361
133

Merker phot.

Ill. 5. Kraal on the steppe between Kilimandscharo and Meruberg.

342 out of material available everywhere. Like every task in the
[462] kraal, hut construction is the duty of the women. After the site for the individual hut (Fig. 3) is cleared of grass and brush and then leveled, the spiral-oval ground plan is undertaken in that the woman scratches it on the ground with her foot. They do not
[804] use any auxiliary means for measuring it; measuring by eye is sufficient for the woman who, even as a child, helped her mother
342 with this work. Into the ground plan, at foot-long intervals, poles
335 (ol ōmi, el ōm) about 1 1/2 meters long are stuck in the ground and joined lattice-like with thumb-thick cross-switches (ol gereni, el gerenen). Then in the longitudinal diagonal seven to eight supports (em bogischi) are dug in, over which a longitudinal bar (ol ereschena, el ereschenan) is put from one end of the hut to the other. Over this the poles are arched and the opposite ends lashed
[284] together with papyrus grass (es sedja). By interplaiting finger-
[824] thick switches (en jaschoi, n jascho) walls /24/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters high, 4 to 5 meters long and 3 meters wide. Neats' skins served
[237] principally for roofing before the rinderpest raged among the
[731] livestock around the year 1890. Now, /Figs. 2 and 3 appear here/
[824] when the Masai herds have become vanishing small in contrast to former times, the switch framework is first packed with a
[237] layer of dry, long-bladed grass (ol gudjeda or ol godjeda) 15 to

342 latter a separate entrance leads into each of these compartments.
[352] The bed consists of a pad of dried grass over which two dehaired
[237] neat-skins are spread. Opposite the door is found a small enclosure
[233] (ol ale l el ascho) into which young calves are put for the night. There is often found beside the door yet another enclosure (ol ale l ol balelon) for young goats and sheep, if these are not housed in small pens built beside or on the hut.

/25 cont./

• 342 small pens built beside or on the hut. The door opening of the hut is closed off at night by means of a neat's skin hung over it or a thorny branch dragged in halfway.

361 /26/ The individual huts are very close to one another. The space between two of them amounts to scarcely half a meter, so that in the evening the entire ring of huts seems closed except for
417 the entrances. For protection against wild animals and enemies,
361 the kraal is surrounded by a stout barricade of thorny acacia
351 branches, with which the entrances are also obstructed after the
824 livestock has returned from pasture. In the place enclosed by the
[233] huts one finds a ring-shaped thorn-barricade in which the livestock stays during the night: large livestock, calves, and small livestock

417 are separated from one another by thorn barricades, and the huts
35 are often protected from damage by the cattle by means of thorny
824 branches placed around them.
233

One distinguishes between kraals for the married (eṅg aṅ el
621 moruak) and such for the warriors (ol manjata). In the former live
361 the married men (ol moruo, el moruak) with their families, in the latter the warriors (ol moráni, el móran) with their mothers and the half-grown, uncircumcised girls /27/ (en dito, n doje). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moruo kraals. A dense thorn-barricade extended around the entire kraal complex.

595 The married man on the average has five to six wives, wealthy
[556] men have in addition also a few secondary wives to whom they
[736] are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

[889]

Approximately every three to six days caravans of old women, accompanied by a few old men and laden with maize, bananas, batatas, etc., arrive in the Masai kraals. Then there begins an hours-long haggling and bargaining with the customary market-woman shouting. Each one tries to sell her goods as advantageously as possible, that is, exchange them for just the articles that she needs. Often the caravans come from a distance of four to five days' march and then remain in the kraal for a couple of days before they set out for home.

561 According to this, the institution of the age classes together
701 with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors.
[703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 As soon as the circumcision wound has healed, the circumcised
702 exchange the long apron (ol gelí, el gelíni) for the short skin-cape
561 (e megiti, /77/ megitin), again put on their ornaments, anoint their
[291] bodies with red paint and, after they have once more shaved their
[302] heads, set out as el barnot (sing. ol barnoti, formed from barno = bald-headed), armed with spear, club, sword, and shield, into the
[411] bush to celebrate the ol geteń l oń gutui. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect
[342] a kraal of thorns for themselves or even build small huts out of leaves.
701 The festival consists of consuming large quantities of meat and noth-
702 ing but meat! For this each participant furnishes a fat ox obtained
561 from his father, which must be plain-colored, black if possible.

621 701 [361] [634] In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ol manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a [342] [513] [423] large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

621 701 462 [351] [356] The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

[Warrior Kraal]

701 /85 cont./ Under a shade tree with thick
361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three
701 meters. On the side opposite the
342 entrance opening is the common
35 sleeping place of the ol gibet companions; between this and the door, the hearth; beside the door the space for firewood.

Fig. 18.

ol giloriti (2),

2. Acacia abyssinica.

595 and so on. The wife is given a specified number of cattle to keep in trust for her son, and she and the children also tend young animals in the herds.

342 These huts are about five feet high and of varying dimensions, but usually roughly square and 10 to 20 feet across. The door is very low. Just inside the door there is normally a baffle wall of loosely woven twigs. Beyond that there are often two or three rooms, each divided from the others by a low open wall of [231] twigs. Young livestock are brought into one of the [513] rooms and the others serve for sleeping and cooking. [352] Usually the beds are platforms of twigs and grass covered [354] by hides. The cooking fire is in a far corner and is very small, normally with three stones around it to support pots. There is no smoke hole in the roof. The outer walls and roof are an open mesh of wattle often interwoven with coarse grass and shrubs. Support comes from larger branches and small logs up to about six inches in diameter. The exterior and walls and roof, and the insides of the door opening are plastered with [184] a mixture of mud, cattle dung, and short grasses. Hut [462] design varies slightly from area to area. Constructing the huts is women's work. Men occasionally help in collecting larger trees and bushes.

13*
361
[342]

Building a large boma entails cutting a large number of trees. (Fig. 22) Where trees are thick in Western Masailand there are tsetse flies (Fig. 23). Consequently the bomas are constructed away from them in more open country, in open grassland near to hills or watercourses or in open parkland. Under such conditions a large boma can result in the clearance of larger woody growth -- for initial construction, subsequent repair, and for fires -- from an area ranging from about several dozen acres to a square mile.

361
*233
221

Fosbrooke (1948), Grant (1957), and Page-Jones (1948) have noted that the Masai normally placed their dry season bomas within about five miles of permanent water. One day they graze the animals to and from water, letting them drink. The second day they graze the opposite direction, and on the third day they return to water. Thus a rough circle with diameter of ten miles is grazed around each boma. In the wet season the Masai leave the boma, either setting up a new one in an area of good [887] grazing, or making temporary camps (Ibid.). Occasionally old people with a few milk cows are left behind in the main dry season boma. Under the present conditions in Western Masailand we saw very few large bomas that were 342 not located at permanent water. It may be that increases 343 in stock, or decreases in available water, or some other *233

Figure 22.

Abandoned boma site in Acacia woodland north of the Serengeti Plain. This was a small boma, abandoned for two years. The remains of the boma are behind the Land-Rover. Note the numerous stumps of Acacias cut for construction of the boma and for firewood; the sprouting from the stump in the foreground; and the ground cover of weeds and coarse grass. The palatable bunch grasses were killed out by overgrazing before the Masai left.

* 342 factor has changed the Masai pattern of boma construction.
343 The present bomas, for the most part, are semi-permanent
*233 and during the rainy season the herds are sent out to graze in the care of a few youths supervised by one or more elders. They construct temporary brush bomas, just large enough in diameter to contain the stock in their care. Usually no plastered hut is constructed. Instead a small, often open-roofed brush enclosure is made in one corner. Where a temporary boma is to be occupied for several weeks a somewhat larger boma is made and the hut may be plastered. Building these temporary bomas results in some brush clearance, but rarely in any tree damage.

362 Large bomas appeared to be relatively
[361] permanent. When a large boma was abandoned another was usually built nearby, often only a few yards away. Individual bomas appeared to be occupied normally for about five to eight years, although some doubtless last longer. One cause for moving is the accumulation
*[233] of dung. In the center of large bomas where the livestock are driven during the night the dung accumulates into a gentle hill sometimes several feet high at the center.
[364] This creates sanitary problems in the rainy periods since the huts are at the foot of this hill and the doors usually face inward. When it is dry if a fire gets

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they saddle their donkeys with skins and pack-saddles in which they put their gourds, and the women carry bags.

Should they stop in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ngobori, i. e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They procure poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from trees; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

Masai warriors' kraals and slaughter-houses.

Masai warriors do not live in the kraals of the married people; they have their own kraals, where they dwell with their mothers and lovers.

When they go to the woods to eat meat, they live in the slaughter-houses[1] with their boy-servants.

[264] [1] Meat may not be eaten in the manyat, or warriors' kraals, and special places, called il-puli, are erected in the woods, to which the warriors retire when they slaughter cattle.

56 Prior to the meat *Ol-Ng'esher* the men must eat meat in the forest or bush.
[264] They build a small round stockade, called *Ol Pul*, of thorns with one entrance about
[343] 2 ft. 6 ins. high through which one must crawl. Here they store the meat, and sleep. They may eat the meat either within or without the *Ol Pul*. There is a picture of an *Ol Pul* opposite p. 292 in Hollis.

[252] The meat is pierced by a wooden spit about 18 ins. long. This is stuck in the ground by the fire and the meat is toasted. Soup is also made of fat and water and the bark of *Il Kitoloswa* or *Il Kiluretti* trees. The decoction of these barks
[296] makes the warriors fierce. They also ascribe to this cause the curious hysterical
[158] fits into which they frequently fall when excited. I can vouch for the *Il Kitoloswa*, small doses of which do, in fact, produce a fierce and unbalanced state of mind. I have never tried the *Il Kiluretti*.

561 When the warriors sleep in an *Ol Pul* they pray to God at sunrise on behalf
782 of their age-group. Each one takes his skewer and rubs it in the ashes of the fire
539 in the *Ol Pul*. He then goes out of the entrance and strikes the sides of it and walks towards the East reciting his prayer and striking trees with the skewer. While
[533] returning he sings the war song *Eng-ipolossa* of his age-group. As he re-enters the *Ol Pul* he thrusts the skewer into the thorns at the entrance on his right and leaves it there. There are nearly always a bundle of skewers to be seen in this position.

The prayer is as follows :—

"Na' Ai aatomono otabukua ekemānikino enkila otabukutua linono lemaar il ogarak ol lughunya. Na iye Eng Ai aatomono injoki iyook ingishu naang'ang'unyi. Nan iye Eng Ai naatejo Na Ai tadnyiki iyook ol poror naa ol kilo. Naa iye Eng Ai naatejo injoki iyook nemear il ogarak il lughuny otabukua il omunyak neinguaa kulikae omunyak nemear il ogarak il lughung. Aatomono Na Ai wisen ai engolong meilepu t'ol endolu tangoro iyook il tiil-omunyak."

Here is the translation :—

"O God I have prayed Thee having come out hither with my garment unbound. Thy (warriors) have come out here, let not wild beasts hurt my head. And Thee O God I have prayed give us the cattle which prosper steadily. And Thee O God I have prayed bind together for us the age-group in one garment. And I have said to Thee O God let not the wild beasts hurt the heads of the fortunate ones who have come out here and let them not hurt the heads of other fortunate ones who come from far away. I have prayed Thee God, my beloved, when the sun rises from the valley, strike thou us with the rays which are lucky."

Each age-group has a different song. The song of the Il Kitoip is "*Tangoraki*
[533] *iyook t'alema tauwa nedurs indonata o asurai nemetii ol morani le sayet elobi.*" I cannot translate it because, like other Masai songs, it is couched in rather cryptic language.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

572
latter is of little economic significance, except that it is the duty of the warriors to get 573
cattle by raiding. In the division of work, the people mainly concerned are the uncircumcised boys, the girls, and the women. The boys do most of the herding, 462
assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

The only specialists in the economic sphere are the smiths, *il-kunono*, sing. 326
ol-kunoni, who live segregated from the rest of the Masai, and marry among them- [463]
selves. They have a distinctly inferior status, and are despised by the Masai, who [564]
oil their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Matapato river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[6]

Though according to Hollis a few Masai women made pottery, the Masai as a 323
rule buy their pots from the Bantu. 439

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, 262
nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and [241]
blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *ol-osowuan*, and eland, *o-sirua*, which they considered to be related to cattle, and therefore fit to eat.[7] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *ol-pul* in the bush [343]
where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not [264]
eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Bantu agri- 439
culturists, *il-mesh*, whom they despise, in order to get what they want. Their [186]
chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs,

[6] Leakey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 209); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[7] The Galla also consider the buffalo to be the equivalent of the ox. Bahrey, *Historia Gentis Galla*, chap. XX, Guidi.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
• [343] dividual ones. Thus everyone remains responsible for the barricading
[672] of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on ac-
701 count of the lack of milk. Milk is the only food that the Ol morani
262 takes in the kraal, and the lack of it is therefore especially grievous.
264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e bull) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

Fosbrooke (1948), Grant (1957), and Page-Jones (1948) have noted that the Masai normally placed their dry season bomas within about five miles of permanent water. One day they graze the animals to and from water, letting them drink. The second day they graze the opposite direction, and on the third day they return to water. Thus a rough circle with diameter of ten miles is grazed around each boma. In the wet season the Masai leave the boma, either setting up a new one in an area of good
[887] grazing, or making temporary camps (Ibid.). Occasionally old people with a few milk cows are left behind in the main dry season boma. Under the present conditions in Western Masailand we saw very few large bomas that were
342 not located at permanent water. It may be that increases
•343 in stock, or decreases in available water, or some other
*233

[TEXT CONTINUED ON PAGE 133]

342 factor has changed the Masai pattern of boma construction.
• 343 #233 The present bomas, for the most part, are semi-permanent and during the rainy season the herds are sent out to graze in the care of a few youths supervised by one or more elders. They construct temporary brush bomas, just large enough in diameter to contain the stock in their care. Usually no plastered hut is constructed. Instead a small, often open-roofed brush enclosure is made in one corner. Where a temporary boma is to be occupied for several weeks a somewhat larger boma is made and the hut may be plastered. Building these temporary bomas results in some brush clearance, but rarely in any tree damage.

362 [361] Large bomas appeared to be relatively permanent. When a large boma was abandoned another was usually built nearby, often only a few yards away. Individual bomas appeared to be occupied normally for about five to eight years, although some doubtless last longer. One cause for moving is the accumulation
* [233] of dung. In the center of large bomas where the livestock are driven during the night the dung accumulates into a gentle hill sometimes several feet high at the center.
[364] This creates sanitary problems in the rainy periods since the huts are at the foot of this hill and the doors usually face inward. When it is dry if a fire gets

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood ". He also states that *Unoto* " is probably the best known and most misconstrued ceremony in the Masai age-grade system ". 884 561

Unoto is not performed at a single place for whole Masailand, but in every territorial section or group of sections. [89] It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull. [634]

a) The first stage takes place in a special hut called *singira*. [91] Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY, [92] another test is performed insidie the hut aiming at detecting those who have entered surreptitiously. [346] [834] [754]

In the annual report of the *NAD*, [93] we read that every candidate is expected to give " an account " of his past life. " The importance of the *E-Unoto* " states the same report, " lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe ". " The *O-Singira* " says FOX, [94] " gives the warriors permission to have sexual relations with initiated women ". [783]

b) The nomination of the ceremonial leader (*ol aunoni*, pl. *il aunok*, or *ol otuno*) takes place inside the *singira* hut. The elders 561 624

[89] LEAKEY's statement, p. 194, that at the *Unoto* " all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present " is emphatically denied by FOX, p. 451, and FOSBROOKE, p. 29. According to FOX the following sections perform it: (a) Purko; (b) Loita and Siria; (c) Damat; (d) Kuputiei, Lodokilani and Matapatu; (e) Laitokitok; (f) Kisongo. And FOSBROOKE says that the *Unoto* is celebrated " by sections or groups of sections " and is attended by as many warriors as possibile, " but by no means all ". SANDFORD, on HEMSTED's authority, recorded that the *Unoto* was held by the Purko, Kakonyuke, Dalalekutuk and Damat on the Kinangop. The Sigirari, Matapatu, Kaputiei and other divisions where it suited them best. [114] [184] [634]

[90] There are contradictory descriptions of the *singira*. MERKER states that it is a 'very big hut'; BAGGE says " not so big "; HOLLIS " small ". Leakey and Fox state respectively " an enormous ", and a " very large " hut. Probably it all depends on the actual number of the initiates involved.

Kenya

When the time for the ceremony arrives, a very big village is built called *sumubu*, and all the members of that age-grade which is to be transferred from the Junior to the Senior Warriorhood stage assemble here with their friends and relations. The warriors concerned all dress up in their very best finery, and lion skins especially are in great demand; and for nine days they dance a special dance called *Kaibach el moran*. During the whole nine days of dancing a very great number of cattle are slaughtered, and there is great feasting and beer-drinking, but neither the dancing nor the feasting are the important part of the ceremony; they are merely incidentals, centred around the *thingira*. 561 [535] [574]

The Thingira.—Away from the main village an enormous hut has been built which will accommodate anything up to four hundred men at a time. It is said to be round in plan, to have a pointed roof, and to take very many days to build. There are no partitions inside it, but in the centre is dug a circular pit. Outside the hut is a thorn fence with only one entrance. This hut is called *thingira* (a word which has been borrowed by the neighbouring Kikuyu and applied to ordinary bachelor huts), and is the centre of the whole of the *Eunutu* ceremony. During the whole of the nine days of the ceremony this *thingira* is used as a "club-house" by the men of the age-group concerned with the ceremony, but there are certain restrictions, and it is these restrictions which give the key to the meaning of the whole ceremony. It is considered both ignoble and dishonourable for any man in the warrior groups—and more especially the junior warrior groups—to have any sexual relations with any but the uninitiated girls, but, of course, cases do occur either openly (*see* Forced Marriage) or in private. Now all members of the age-group concerned must be present at the *Eunutu* ceremony, but only those who have strictly observed the above regulation and have never had sexual relations with an initiated girl or married woman may enter the *thingira*. In order that no one may do so under false pretences the entrance to the *thingira* is bewitched by the elders, so that if anyone ineligible enters he will surely die. 561 34 [192] [834] [754]

The *thingira* is not big enough for all the warriors concerned to use it simultaneously, and each day for the nine days there is a public ceremony when the various individual territorial groups are expected to enter. For this ceremony all the friends and relations of those who are expected to enter collect round the entrance and each individual as he enters is greeted with applause, as he has shown by entering that he has not dishonoured himself or his family. Those warriors who dare not enter try to slink away unobserved, for they are disgraced. Inside the hut—as mentioned—is a large hole which is used as a cesspool, into which the men who enter the hut must urinate. This cesspool is also bewitched as an extra precaution, and anyone who has falsely entered and evaded the witchcraft of the entrance will certainly die upon urinating in the hole. All those who enter the *thingira* on any given day during the ceremony sleep there that night, and also have milk and meat brought them for food, and sit and talk for hours. During [514] [754]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

561 the nine days the elders in charge of the ceremony go about looking out for two
346 warriors from the group noted for their humility and honesty, and having selected them they keep their names very quiet, as the position for which they are being chosen is not at all sought after. In fact, as soon as the selection has been made, the relations of the two men chosen are heavily bribed in order that they shall allow them to be appointed.

561 *Shaving Ceremony.*—On the tenth day of the ceremony the heads of all the
624 warriors of the age-group are shaved, and during the shaving the elders come and point out the two warriors whom they have chosen, and publicly proclaim them as the
[302] heads of the group during its time in the senior warrior stage. These two men are called respectively *olutunot* and *oloboruengene*, and there are certain very strict regulations and restrictions attached to their position, the breaking of which would result in punishment by death; hence the unwillingness of the warriors to be chosen for these appointments, and the bribing of their relations. Unfortunately, no information about the duties of these two, or of the restrictions which they must observe under penalty of death, could be obtained from my informants. After
561 the shaving ceremony is over and these two have been appointed, the warriors go back to their normal life; but before doing so they first go all together for a few nights to a new village built for the purpose called *ngang'ongarithi*, and from there
[361] they scatter to their own districts. They may not, however, return to their old *manyattas*, which they vacated when they came to the *Eunutu* ceremony, but must build new *manyattas*.

Becoming Elders.—The length of time spent in the senior warrior class depends entirely upon whether a man belongs to an age-group called *jangienobur* or *murategedienye* (*see* the Age-group system). Transfer from the senior warrior stage to the Elders' stage takes place as a group transfer, but one age-group cannot transfer alone, but always two groups, a *jangienobur* and a *murategedienye*, must transfer together. No transfer, therefore, can take place until there are two age-groups in the warrior stage who have gone through the *Eunutu* ceremony. Once there are two such groups in the senior stage the actual time of transfer is dictated by whether or not there is a new age-group waiting in the novice stage ready to move up into the junior warrior stage, for as stated above (*see* the Age-group system), there may never be more than three age-groups in the warrior stage at one time. Equally no two warrior groups may move out into the Elders' stage until there is a new age-group in the novice stage, as otherwise it would mean leaving a single age-group alone in the warrior stage for too long, and this would be a serious thing when only the warrior groups are the fighting forces of the tribe. The actual transfer from the senior warrior stage to the Elders' stage takes place without any ceremonial, and the
[591] men just leave their *manyattas* and go and live with their wives, with whom as yet they have never lived, although the wives may be mothers with several children (*see* Marriage).

Kenya

561
884

The *Loita* and *Siria E-Unoto* ceremony took place in July, 1929, and lasted three days. They invited me to it, but, owing to pressure of political work, I was unable to arrive till the morning of the third day at about 10 a.m. (Pl. XIII, Figs. 1-3, and Pl. XIV, Figs. 1 and 2).

The Masai definition of the *E-Unoto* is as follows :—

"The *E-Unoto* is a religious ceremony of blessing of the age-group, after which the warriors have leave to marry.

"The *O-Singira* gives the warriors permission to have sexual relations with initiated women."

The warriors were dancing at the time (Pl. XIII, Figs. 1 and 2). After about an hour they went off to a spot about a mile away in the forest, where I was informed that they sacrificed a bullock as a charm.[1] They returned about 3.30 p.m., about twenty of them being dressed in a manner similar to that of the three functionaries (Pl. XIII, Fig. 3). They danced round the *O-Singira* hut, and those warriors who were entitled to enter it led their families up to smear some cow-dung on it. The warriors then squatted down in a close group in the centre of the *manyatta*, while some elders walked round them drinking honey wine and spraying it out of their mouths over the group as a blessing. Others of the elders sat by the *O-Singira* hut and refreshed themselves with honey wine. It was at this point of the proceedings that the age-group of warriors was named *Irimirim* (from verb *arim*, pierce). This terminated the festival.

[789]
[787]

561
884
624

The chief functionary is the *Ol-Otuno*, but I cannot say what part he takes, having arrived so near the end of the ceremony. He is held in great reverence for ever afterwards, and it is unlucky for the age-group if a mishap befalls him. He must not take part in political affairs. He is always spoken of as *Ol-Otuno*, and his son, when he grows up, is known as the son of *Ol-Otuno*. (Pl. XIII, Fig. 3.)

There is a minor official called *Ol-Oiber engäne*. *Eng-äne* is a thong of leather. If my spelling of the first part of the title is correct it would perhaps mean "He who splits the thong." But there are several words from which it might derive, and I have no knowledge of his duties to assist me in checking my spelling of the name.

561
346

O-Singira (*Thingira*).—Being ignorant of Kikuyu I had been puzzled by this word prior to reading Mr. Leakey's article. At the *Loita E-Unoto* it was built just within the eastern edge of the village. The village consisted of a circle of huts about 300 yards in diameter. I looked in to the *O-Singira*, but it was too dark to see anything. It was made of cow-dung plaster like an ordinary hut, but was much bigger. Ranged against the wall outside were the heads of numerous oxen which the warriors had slaughtered.

[361]
[337]

561
884

I was informed that 109 of the warriors had not had sexual relations with initiated women and could therefore enter the *O-Singira*. After the *E-Unoto* the

561 **The 'E-Unoto' Ceremony of the Masai.** *By Lord Claud Hamilton. With three text figures*

135 The cycle of ceremonies connected with the forming of a Masai age set starts with that known as *em-polosata*, performed by the members of the age set immediately senior to the existing warrior set. These members are destined to become the instructors in tribal lore of the youths who are about to comprise the new age set. *Em-polosata* is followed by *en-dungore* which marks the end of the current circumcision. These two ceremonies are followed by a four-day dance of the initiates-to-be [535] called *en-kipaata;* and the circumcision of the new age set is carried out over the next three to four years, the youths being 14–17 years of age. Each generation is divided into Right Hand and Left Hand circumcisions; the latter begin their ceremonies about six to seven years after the former, but both cease to be warriors at the same time.

Seven years after the beginning of their circumcision, the members of the Right Hand Circumcision become senior warriors through the *e-unoto*. This ceremony, which is part of the age-set institutions, is held about every seven years, when an age set of junior *muran* (warriors) feels that it is sufficiently strong and mature to graduate into senior *muran*, and so 'push' the next senior warriors of the previous age set up into adult manhood. The word *e-unoto* is derived from the verb *e-un*, to plant upright or set up (*i.e.* a new age set of senior warriors is 'set up') and, as will be seen below, certain things are ceremonially 'set up' in the *manyata* (warriors' kraal) where the ceremony is held.

Tribal elders choose a site for the ceremony, and there the *muran* who are to take part, aided by their mothers and girl friends, build a new kraal. Each young man has his own hut, a [342] long, low building of withies, mud and cow dung. These are [361] built in a circle, facing inwards. At night branches are pulled into the gaps between the huts to keep out wild beasts which might prey on the cattle sleeping in the arena encircled by the huts.

Besides choosing the site, the elders also select 49 *muran* from those about to take part in the ceremony. These 49 'pure ones' as they are called must be young men of good character, 100 per cent. full-blooded Masai and without physical blemish. Their leader, the *Ol-Onumo*, is chosen secretly and is not told of his appointment until the ceremony is due to start. Every *murani* dreads being called upon to fill the position for the *Ol-Onumo* is regarded as a scapegoat for the misdeeds of his fellows. They [783] believe that if he dies young as a sacrifice for their sins, they will live long and prosper.

After the other huts have been built, the mothers of the 49 [346] 'pure ones' build the sacred hut called *O-Singira*. This is a round building, also made of branches, mud and cow dung, topped with a conical roof of the same materials. Around its base is laid a circle of bullocks' skulls on which are left the horns and a strip of skin [539] running down the face. Inside, in the centre of the *O-Singira*, the *Ol-Onumo* 'sets up' a stick of the wild olive tree (*Olea chrysophylla*) and so receives his name which means 'He-who-set-it-up.' The doorway of the *O-Singira* faces that of the *Ol-Onumo*'s hut, next to which is that of his assistant known as 'The Cutter-up of the Hide.'

The *e-unoto* of the Loita division of the Masai was held on 10–13 June, 1959, at Entasekera in southern Kenya. The youths taking part were of the right-hand circumcision, the members of which are known as *Il-Deregeyani*.

561 The ceremony lasts for four days, and the first of these is called 535 'The Day of the Red Dance.' As dawn breaks, all the people assemble outside their huts facing east. Four elders chant a prayer

276 bark of certain trees, a relic of the old cattle-raiding days, for when
561 the fit has passed the sufferer loses all fear and is ready for battle.
535 An unusual feature of the drug is that, once in a man's system, its effects last for life, and, given sufficient excitement, the man is liable to fits for the rest of his days.

561 The second day of *e-unoto* is called 'The Day of the White
535 Dance.' Soon after sunrise the *murans* went off into the bush to

[484] paint their bodies with diatomite. This white, chalklike substance is brought on foot from the Eburru Mountains near Naivasha in The Rift Valley. To bring it, two senior *murans* of good character are chosen, and they go off dressed in women's clothing and ornaments, carrying bamboo staves and cattle-branding tools as a sign that they are on a peaceful errand. Nearing the destination they stalk the diatomite as if it were game. Then they give the

/112 cont./

564 326 [197] [198] [114] [563]

/footnote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564 326 46 [114] The opinion of many a European, that the /113/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El konono who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564 326 783 Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564 326 Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Eńgussa from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugge people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

564 326 361 [314] [317] [347] [354] 326 314 While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (ol guguet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (eń edoñschore). The smith makes his tools as well as his

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njempe and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 175 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the boughs. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 344 [352] 344 342 [237] [361] [364] 344 [351]

elephant is attacked at close quarters, the arrow part driven into the great brute, and being loosely fixed in the handle, it remains when the latter is withdrawn. Another arrow is then affixed, and the same operation performed. It is said that an elephant will live a very short time after being thus stabbed, and entire herds are killed without one escaping, so dexterous and daring are these hunters. The Andorobbo also use the ordinary bow and arrow, but only for the smaller game. D 224 411

CHAPTER XI.

THROUGH KAVIRONDO TO VICTORIA NYANZA.

The people (Wa-kwafi) of Njempe presented an interesting study to the observer as throwing light upon the origin of the various small tribes which people Africa. Unquestionably Masai in race, and only separated from that tribe through the loss of their cattle and the consequent necessity of breaking their cherished convictions by cultivating the soil, they had developed new ideas, manners, and customs in a comparatively short period. M 101 184

They did not by any means supply an argument in favour of the vegetarians; for in personal appearance they had distinctly degenerated, and could not for a moment compete with their aristocratic carnivorous brethren of Lykipia. This was especially noticeable among the women, who had lost their slender, *graceful* shape and acquired the ill-proportioned, unwieldy contour of the negress. Perhaps an exception might be made in favour of the young women, many of whom were well-formed and characterized by most pleasing and interesting manners. M 142 184

The colony consisted of two villages—Njempe of Guaso Tigirish, close to our camp, and Njempe of Guaso na Nyuki. The houses were of the bayonek order, with floors beneath the level of the ground, very small and badly built. They were surrounded by a double fence of thorns, which, however, are a greater source of danger than of protection, as in this dry climate they become like tinder, and consequently can be set on fire easily. If this were done at several points simultaneously, the inhabitants could easily be burned to death. M 361 M 342 351

In a hazy sort of way they tried to keep up the distinction M 184

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

are taken in another direction, which means that they drink only on alternate days, [233]
but at the same time graze over a larger area than if they went to water every day, 361
thus helping to conserve the grazing. There are two types of kraal. The married men with their wives and children live in one type, and the warriors with their mothers, sisters, and girl lovers in another type. The main structural difference [351]
between the two types seems to be that the warriors' kraal has no fence, while the elders' kraal is surrounded by a thorn fence. The elders' kraal varies in size: it may contain from seven to several hundred huts, though very large examples (such as were seen by Teleki and von Höhnel) are probably uncommon; the average is probably about 20 to 50. The warriors' kraal may contain between 50 and 100. In the elders' kraal the huts are built round the inside of the fence, which is also the enclosure in which the livestock are housed at night. The number of gates in the fence depends upon the number and size of the families which live in it. Each family has exclusive rights over at least one gate, and a large family with many cattle has more than one. The kraal, *esh-eg*, thus approximates to a village, for several [329]
families live in it, and the gate, *kishomi*, has come to typify the family, the word being used with the article (*en-kishomi*) as a synonym for *el-marei*, "the family." 361
When a man sets up his home in a kraal, he puts his first wife in a hut on the right of his gate as one goes in, and the second wife on the left; the third, if he has one, 592
goes on the right, and the fourth on the left, and so on, the huts being so arranged that each succeeding wife lives immediately to the right or left of her gate. The people on each side of the gate form two distinct groups, *in-taloishie*, the effect of which is felt most in matters of inheritance. (See below, p. 108.) The warriors' 361
kraal or *e-manyata* is inhabited by all the members of one age-set in one district, 591
who constitute a company, *aiel*, and the kraals are built in strategic positions. With the men live their mothers, and some young sisters who help their mothers, and if [561]
old enough become lovers of warriors. The mother, her warrior son, and younger children share a hut, all sleeping on separate beds; when the warrior wants to sleep with his lover he goes to another hut. The mother's husband may visit her at any [593]
time, and when he comes her hut must be given up to the pair. The inhabitants of a *manyata* vary considerably in number, ranging from 30 to several hundred.

Livestock

Cattle

Cattle, *in-kiska*, are the object on which the lives of the Masai are centred, and on which their whole existence depends. Their importance is both material and spiritual, and people who perform any kind of work other than tending cattle are despised by the Masai, whose attitude towards cattle is similar to that of the Nandi. The Masai believe that in the beginning God gave them all the cattle in the world, and therefore nobody else has a right to possess any. Cattle provide the Masai [262]
warrior with his food in the form of milk, blood, and meat, and they give him spiritual and mental satisfaction through their existence, though it would seem that there is less outward and ritual expression of the love of cattle than among some other East African tribes who combine pastoralism with agriculture. This, however, doubtless by any means indicate that the Masai are an agricultural people who have wholly given up agriculture and taken to pastoralism. Since the Masai, unlike the Nandi, kill large numbers of their cattle for eating, it was essential in the past for them to maintain the size of their herds by continual raiding, for the natural reproduction rate would not have been enough. On account of its high ritual value, milk may not be drunk on the same day that meat is eaten, nor may it be boiled; but it may be drunk mixed with blood. Grass also has a high ritual value, being the food of cattle, and is used as a sign of peace. In 1930 the average size of an elder's herd was officially estimated at about 75 head of cattle, 85 sheep and goats, and 18 233
donkeys; this was based on the estimate of 720,000 as the total number of cattle belonging to the Kenya Masai. In Tanganyika, it was found that the average number

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,250 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Samburu section called Il-Doigio, they have admitted a variety of refugees including Kamasya, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokua Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Njemps Kubwa" and "Njemps Ndogo" in the Tigrish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *eunoto* and other ceremonies, and practise the "free-love" system of the pastoralists, though without the *manyatas*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Njemps was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were intersected by irrigation channels bringing water from dams across the river Tigrish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[13] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of Suk and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.[14] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelaba blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Bantu stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Baraguyu in Southern Masailand are also to be classed as agricultural Masai.[15]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-ayioni*. At circumcision[16] he enters an age-set and becomes a warrior, *ol-murani*, "one who is circumcised," and may associate with unmarried girls. At the *ol-gesher* ceremony he becomes an elder, *ol-moruo*. Warriors may marry when they become senior warriors. After the *ol-gesher* the newly made elders attend to their family concerns, and get wives

342 small pens built beside or on the hut. The door opening of the hut is closed off at night by means of a neat's skin hung over it or a thorny branch dragged in halfway.

361 /26/ The individual huts are very close to one another. The space between two of them amounts to scarcely half a meter, so that in the evening the entire ring of huts seems closed except for the entrances. For protection against wild animals and enemies, the kraal is surrounded by a stout barricade of thorny acacia branches, with which the entrances are also obstructed after the livestock has returned from pasture. In the place enclosed by the huts one finds a ring-shaped thorn-barricade in which the livestock stays during the night; large livestock, calves, and small livestock

233

One distinguishes between kraals for the married (eng an el
621 moruak) and such for the warriors (ol manjata). In the former live
361 the married men (ol moruo, el moruak) with their families, in the latter the warriors (ol morani, el moran) with their mothers and the half-grown, uncircumcised girls /27/ (en dito, n doje). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moruo kraals. A dense thorn-barricade extended around the entire kraal complex.

595 The married man on the average has five to six wives, wealthy
[556] men have in addition also a few secondary wives to whom they
[736] are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandoróbo, who presumably learned the
potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they
buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[758] healthy people uncooked, as fresh (en gule) or sour (en gule naoto);
boiled milk is food for the sick and as such is usually mixed with
pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is
especially popular because of its very high fat content. Blood of
cattle, sheep, and goats is drunk fresh or eaten in the clotted
[758] state. Milk mixed with fresh or /33/ cooked blood (en jiwót) is
greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by
agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is
prepared without adding salt; it is cooked either with various
spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[753] (1),

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
[253] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence
[231] of neglecting this custom. Bringing milk into contact with meat is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organization: the speaker, his badge and tasks; leaders; benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- War: permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

621 In each district one usually finds only one warrior kraal, which
70 quarters all the warriors of this area. It lies in the spot from which
[361] the district can best be protected from enemy attacks. The warrior
[634] kraal (ol manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a
[342] large sleeping place for a warrior, and usually, at the other end of the
[513] hut, a small one for one of the mothers. The huts of those who are
[423] staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

621 The kraal is laid out by the old women, they build and maintain
701 huts and thorn fence. Together with the girls they milk the cattle,
462 clean the kraal every day in that they spread the cow dung, while
[351] the former sweep up and carry out the goat dung, fetch water, and
[356] keep the huts clean.

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 175 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the bough. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 844 [352] 844 342 [237] [361] [364] 844 [351]

Kenya

Before dealing with the subsequent procedure, after a girl has promised to visit a warrior on a given night, it is necessary to outline the sleeping arrangements and accommodation in a *manyatta* hut. The hut is not divided off into rooms in any way, and at one end of the hut is the bed upon which the woman (mother of one of the warriors) to whom the hut belongs, sleeps with her younger children. At the other end of the hut, not screened off in any way, is the bed upon which the warriors and girls sleep. No warrior may ever sleep upon the married woman's bed, but the woman's husband can come down and visit her whenever he likes, and when he does so, no warriors or girls may sleep in the hut. Ordinarily, however, the woman's husband does not live at the *manyatta*, and she and her small children sleep on her bed at the one end of the hut, while the warriors sleep on [illegible] at the other end of the hut with the girls. No warrior ever sleeps in his mother's hut, but always in one of the other huts if he has invited a girl to spend the night with him. When, therefore, he has arranged for a girl to visit him at night he goes in the evening to one of the other huts and arranges to sleep on the young people's bed there. He then sends a message by the woman who owns the hut to tell the girl that he is sleeping there so that she may come to him. There is absolutely no objection to several men coming in this way to the same hut, and sleeping on the same big bed each accompanied by his girl. In fact, it is considered wrong for a warrior and a girl to have sexual intercourse unless there are also other couples sleeping on the same bed. Moreover, besides those men who have come to the hut and sent for their girls to join them there, there are usually several younger girls, daughters of the woman who owns the hut, sleeping on the bed too. These young girls, too young as yet to sleep with the men sexually, nevertheless, sleep on the same bed as the warriors and older girls, and thus grow up steeped in the customs of the *manyatta*.

It is exceptionally difficult for a European to understand all the full details and facts concerning native sex life, but the following facts have been noted and verified for the Masai. No girl may sleep with a man except she be absolutely nude, but on the other hand, although by tradition and by etiquette she may not refuse an invitation to sleep with a man (except for the two reasons already given above), she is not necessarily expected to allow him full sexual intercourse, and, in fact, often does not do so. Thus—strange as it may seem—Masai girls do sometimes go to their husbands as virgins in the physical sense of the word (*see* Marriage), although they may have slept with men in the *manyattas* countless times. Usually, however, Masai girls have no objection to full intercourse except during the first four or five days after each menstrual period (*see* Girlhood), for the Masai firmly believe that conception cannot occur unless intercourse takes place very soon after menstruation, and four to five days is considered an absolutely safe margin. Moreover, this belief seems to have a strong foundation in fact, and it thus raises a very interesting point for physiologists as to whether this is as true of primitive peoples as it

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

are ready for one night's occupation. Text-fig. 3 shows its ground plan. It takes 342
two to three hours to build. If it is to be occupied for some time the walls and roof are strengthened and the hides are gradually replaced by cow-dung plastered on a backing of *Leleshwa* leaves or other suitable vegetable material. The whole, including the calf pen, is enclosed and roofed with cow-dung plaster. A small hole (*E-Lusye*) is usually made at the top of the wall above the fire-wood store to let out some of the smoke. The beds (*En-Dubash* or *E-Rust*) are made of hides put on top of poles 352
placed close together and raised about a foot from the ground. Text-fig. 4 shows the ground plan of a finished hut.

Grass tufts on the floor are just left to dry up and get trampled out of existence. 342
Repairs are done by the women of the house, and consist in filling up cracks with 356
wet cow-dung. Fleas, bugs and rats are uncommon in Masai huts. Dried puff-balls [751]
and dry cow-dung are sometimes burnt as an insectifuge. The young people are 515
not infested with body lice; but these abound on the aged, taking refuge in bead necklaces and other ornaments.

When the people move on the village is usually left to fall into ruins, but it 361
may be reoccupied later if desired, and if it has not yet fallen beyond repair.

[p. 466 is blank]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *el-taika*; other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrised patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrap* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 411 412 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a lion or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognised as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the lalkon who died *c.* 1890; thus Thomson heard the Il-Akipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Neiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, "the mediator between God and men." But the Masai word *neiterukop* means no more than "that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-epe*, the moon, is grammatically masculine. 771 774 [114] 776 [182]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

561 warcry of old: 'I am the son of So-and-So,' and 'I am the Son of
535 Such-and-Such' and drive their branding irons into the outcrop.
[388] They fill their gourds with it and then return home and are
[574] treated with great reverence at Masai villages en route, being fed
[369] on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 50 yards apart, and marched to the village. Many were ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured cowrie-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: 'Endapuk!'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group
[534] led by an elder blowing a kudu horn (one of the very few Masai musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the O-Singiro hut.

561 Late in the afternoon of this day the mothers of the 40 'years
[302] cases' shave their sons' heads. All the hair, eyebrows included, is
[413] removed by means of a spondent Masai razor. Milk is used in place of soap. While being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the Ol-Oiboni and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family
[825] homes. Great care is taken that none is left lying about in the open
[554] in case birds should use it for their nests—a grave offence to the young men's sacred role.

During the course of the day the branches used as night barricades between the houses were replaced with new ones bearing
[989] green leaves. This is a symbolic act, meant to ensure that the moran may flourish as 'green bay trees.'

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the Ol-Oiboni from his father, is driven into the hut and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the moran gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' while their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the moran, naked and still whitewashed with decoration, came running back to his hut. There he received a deafening welcome from his family, whereupon he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of moran leading their families round the O-Singiro, everyone dancing and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the Ol-Oiboni's heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'years' set arrived, their shaven heads glistening, white circles of decoration like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the O-Singiro while the Ol-Oiboni was led to his hut. In front of his doorway was placed the hide on
[359] which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The Ol-Oiboni, who wanted all two centimes of his role of scapegoat, then sat on the stool.

375 and so on. The wife is given a specified number of cattle to keep in trust for her son, and she and the children also tend young animals in the herds.

382. These huts are about five feet high and of varying dimensions, but usually roughly square and 10 to 20 feet across. The door is very low. Just inside the door there is normally a baffle wall of loosely woven twigs. Beyond that there are often two or three rooms, each divided from the others by a low open wall of
[131] twigs. Young livestock are brought into one of the
[132] rooms and the others serve for sleeping and cooking.
[383] Usually the beds are platforms of twigs and grass covered
[384] by skins. The cooking fire is in a far corner and is very small, normally with three stones around it to support pots. There is no smoke hole in the roof. The outer walls and roof are an open mesh of wattle often interwoven with coarse grass and shrubs. Support comes from larger branches and small logs up to about six inches in diameter. The exterior and walls and roof, and the insides of the door opening are plastered with
[170] a mixture of mud, cattle dung, and short grasses. Hut
[171] design varies slightly from area to area. Constructing the huts is women's work. Men occasionally help in collecting larger trees and bushes.

564 326 [197] [198] [114] [563]

/footnote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564 326 461 [114] The opinion of many a European, that the /113/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El konono who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564 326 783 Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564 326 Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Eiguma from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugga people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

564 326 361 While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The ol konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (ol ayuyi) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (ol ebolchare). The smith makes his tools as well as his

are ready for one night's occupation. Text-fig. 3 shows its ground plan. It takes 342
two to three hours to build. If it is to be occupied for some time the walls and roof
are strengthened and the hides are gradually replaced by cow-dung plastered on a
backing of *Leleshwa* leaves or other suitable vegetable material. The whole, including
the calf pen, is enclosed and roofed with cow-dung plaster. A small hole (*E-Lorye*) is
usually made at the top of the wall above the fire-wood store to let out some of the
smoke. The beds (*En-Dubash* or *E-Ruat*) are made of hides put on top of poles 352
placed close together and raised about a foot from the ground. Text-fig. 4 shows
the ground plan of a finished hut.

Grass tufts on the floor are just left to dry up and get trampled out of existence. 342
Repairs are done by the women of the house, and consist in filling up cracks with 1356
wet cow-dung. Fleas, bugs and rats are uncommon in Masai huts. Dried puff-balls [751]
and dry cow-dung are sometimes burnt as an insectifuge. The young people are 515
not infested with body lice; but these abound on the aged, taking refuge in bead
necklaces and other ornaments.

When the people move on the village is usually left to fall into ruins, but it 361
may be reoccupied later if desired, and if it has not yet fallen beyond repair.

[p. 466 is blank]

/37 cont./

415 The household equipment is quite paltry. Except for two or
• [356] three earthen pots there is found first of all a number of gourd
bottles (Fig. 9) of various sizes: for milking, the ol ôdi, el odio:
for storing milk, the ol buguri, el bugurta and the larger e mala,
'malasin; for making butter, the en diagologol; and for honey
beer, the e' mikovokoro. Some have a bulging, others a slender
bottle shape. They often have sewed on them longitudinal strips
[531] [237] of neat's leather, which are trimmed with cowrie shells (2)

2. The shell of the porcelain snail, Cypraea moneta, which even today takes the place of money in many parts of Interior Africa: on the Nianza /Nyanza/, for example, 1000 cowries have the value of two rupies, two pesas (at an exchange rate of 1.40 marks) = 2.84 marks.

(os sigiral, es sigira). To make these vessels one puts the ripened
415 and externally hardened bottle gourds, the only plant that the Masai
322 grow near their kraals, and, to be sure, on piles of goat and sheep
dung, either in water or to dry on the hot roof until /38/ their
contents soften, and then removes these by poking and twirling
with a brush made out of a neat's tail (ol kidongol). Later, the
[237] cleaning is done after daily use through rinsing with cattle urine.
As the reason for this peculiar "cleaning" the women whose duty
this work is say that the vessels rinsed with water soon become
foul-smelling and the milk stored in them does not thicken as
evenly as with the use of urine, but rather deposits a layer of
water. Since, with use, the gourd bottles soon take on a sourish,
disgusting odor, they are often perfumed, and, to be sure, through
fumigation with twigs of the ol orian acacia, through which the
milk too is given a taste pleasant to the Masai. /Figs. 10 and
11 appear here./

415 The Masai buy wooden bowls (ok gorô, 'ô giras) (Fig. 12),
[434] out of which one eats, from sedentary tribes, while they them-
selves make the finery pots (ol ôkor, es ôkorî) (Fig. 13). On each
[237] of the two openings of a wooden tube approximately a foot long

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organizations: the speaker, his badge and tasks; leaders: benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- Ward permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

62 70 361 634 In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ol manjata or manjata) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /4/ of the warriors. In every hut there is a 342 513 large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are 423 staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut as do the mothers.

62 70 462 351 356 The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day so that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

FL12 Masai FL12

Naivasha province and 5,000 between Kikuyu and Kilima-Njaro. 161 175

The expansion of the tribe seems to have come to an end about the middle of the last century. About 1830 they reached their furthest recorded point in the south and were driven back by the Wagogo and Wahehe. The southward movements of the Gallas and Somalis kept them back on the north-east, though as late as the nineties they raided on the Tana river. It would appear that about 1850 the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf, where they are now settled. Somewhere about the same period—at the time an old man can remember according to the native expression—the Masai dwelling on the Uasin-Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin-Gishu were scattered to the four winds: those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjámusi at the south end of Lake Baringo. Another branch called 'L-Oigella or Segelli took refuge in the Nyando valley but were wiped out by the Nandi and Lumbwa. The Laikipia plateau, which is now uninhabited like the Uasin-Gishu, was not depopulated in 1889, when Peters crossed it and had many fights with the Masai. According to one story, the people of Laikipia raided some other Masai near Nairobi about 1890 and carried off their cattle. These cattle were suffering from rinderpest, and the result was that all the stock of the Laikipia took the disease and died. This was considered as a judgment on the Laikipia for raiding their brethren.

175 648 [361] [731]

At present the agricultural Masai are found chiefly near Lake Natron and south of Mount Meru in German territory. In our Protectorate they are represented only by a few scattered settlements, such as the people of Enjámusi, the Burkeneji, and perhaps the people of Samburu in the Rendile country. It would appear that the name Wakwavi, often applied to the agriculturalists, is merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning *niaous*. The pastoral section classify themselves under five districts, with many subdivisions, namely Kaputiei (Kapite plains), En-aipusha (Naivasha), Kisongo (the district south and west of Kilima-Njaro), Uasin-Gishu, and 'L-Alkipyak. The two last districts, as mentioned, have ceased to exist, and those who

The village, *eng ang*, pl. *ing angito*, is the minimal territorial unit. Villages are distributed within the minor sections. JOHNSTON,[14] had already noted that "they generally range within certain districts". A village is the residence of one or more elders with his or their wives and cattle. A man after his marriage does not live in the same village as his father, unless the latter has become senile and unable to cater for himself.

The internal structure of the village is based on the gate-system. This consists in a proper arrangement of the house on the sides of the village's gates. The village consists of a large yard enclosed by a thorny fence with gates opening at opposite sides. The houses are built on the right and left sides of each gate, every gate with its houses belonging to a single elder. The usual arrangement is as follows: the first house on the gate's right is the dwelling of the owner's first wife; the first house on the left side is that of his second wife; the second house on the right side is that of his third wife; and the same alternating order is followed if married more wives. The central yard is reserved for cattle. The elder's cattle are allotted to each of his wives according to her rank in the house. Cattle in possession of one side of the gate cannot be inherited by the other side. When inheritance takes place it is with great care that one tries to avoid cattle interchange.[15] The gate system, observes FERGOOKE,[16] is an ideal, and "a symmetrically arranged gate is seldom found in practice". When people move in search of better grassland, the village is not destroyed, but simply evacuated. During the owner's absence the houses may be occupied by other temporary tenants. At the reverse migration the owner comes back to his old village *if this is not temporarily occupied, and it is agreed by* custom that any foreigner who might have found shelter in the house must vacate the place to the original owner.

Another type of Masai village should be mentioned here. It is

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

cattle" and "red bulls". HOLLIS,[28] recorded two subdivisions of the Uasin Gishu, "the black striped cattle", and "the red striped cattle", which were, very probably, no other thing than the moieties. 614 634

The Masai *clans*, *ol piloto*, pl. *il piloto* or *en piokoni*, pl. *in piokoni*, are patrilineal and exogamous. Generally, they do not seem to be totemic. However, HOBLEY,[29] and the author of *MS.* No. 48 have recorded the names of a few clan totem. FOX,[30] refers also to the association of snakes with some clans. 614

The true exogamic unit of the Masai seems to be any individed unit, either clan or branch of the clan. A Masai may be adopted into another clan then his original one. The same provision applies even to an alien (Kikuyu, Dorobo). The adoptee, however, never attains the same social status as a full member of the clan. He is free to leave at any time, provided he returns whatever he was presented by his patrons, such as cattle or any other valuable. 614 599 [664]

The relationship between clans and their territorial distribution is not very clear. Analysis would suggest that in the past, clans were territorially separated. At present, there is still a tendency for members of the same clan to live close by to one another and occupy neighbouring encampments. Some sections are almost made up by members of a single clan. Thus, the *Molelian* clan is predominant in Kapiti section; the *Ataipok* clan is predominant in Dalalekutuk section. Such facts, however, seem to be the exception. Usually clans are represented at a time in many different sections "There is no rule", writes HOBLEY,[31] "governing the distribution of the various *piloi* (clans); often members of as many as three *piloi* will be found in one *morn enpang* (elders' village) or a *morun manyat* (warriors' village)". 614 361

Water and cattle are generally clan possession. When new water sources are discovered, they are claimed on behalf of the clan. All clan members who live in the neighbourhood are entitled to make use of them. A foreigner may also be allowed to water his cattle there. If disputes arise, they are settled by the council of clan-members on the spot. As a matter of fact, these water sources are the centre of ordinary social life, as FERRANDI[32] writes: "The 614 623 312 423

[561] [701] rive to the exclusion of other classes above them. Their status is that of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of conscripts it is wrong to say that military activity is solely their privilege.

[621] Residential segregation is generally connected with the military activity of the initiates. MERKER states that the manyat were ordinarily situated in the strategic positions of the country.[100]

[561] But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are

[621] also forbidden to eat meat "seen by women", and because their mothers and girls reside with them in their village, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[101]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-units are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the

[621] full possession of any cattle; the share of their mother's cattle to which they have right remains the property of their fathers' until

[621] they get married. And to the father goes the best part of the booty which they take from a raid.[102] Since cattle are the primary source

[613] of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their grow-elders.[103]

[100] The statement is confirmed by Hirsch's description l. c., p. 61. He says that the manyat were always built free from any kind of cover, "if possible on a plateau overlooking a good water supply", and "commanding many miles of plain".

[101] The initiates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their grow-elders.

[102] MERKER, l. c., p. 88. "Das Vieh gehört der ex Kraaler beweglichsten Sohne bestimmt in erbrechtlicher Weise Sohn und Enkel an der Kraalstelle zur Hand des Vaters".

[103] Other restrictions such as the prohibition against sending and fetching bows, both privileges of the elders, confirm the general status of inferiority of the initiates with relation to the elders.

CHAPTER II.

EARLY HISTORY OF THE BAGU.

[illegible] Origin of the Bami (Bami) and agricultural section (Bakiwanu) of Ti-Ubiru (Sir Charles Eliot's Bami, European tribution Wakiwanu Bari) history of the Bami (Sir Bami as a power, Bami with Bakiwanu, rising in Chagga (Sir Eliot), Sir Eliot's description—Chieftaincy of the source of the Nile (Sir Bakiwanu's war in Kavirondo (Sir Bakiwanu's journey through Bamiland—Capt. Smith's expedition (Sir Bakiwanu's journey (Sir Bami Bami and modern Bamiwanu—Decline of Bami power—Bami and Uganda (Bugandan Bakiwanu between Bami and Uganda (Bakiwanu Bamiwanu—Bugandan Bakiwanu between Bami and Bakiwanu (Sir Bakiwanu Wakiwanu—Bugandan Bakiwanu Bami and Bakiwanu (Sir Bakiwanu Wakiwanu—Bugandan Bakiwanu Bami Bakiwanu—Bakiwanu or Wakiwanu—Uganda Railway survey—Bakiwanu in the Bami of Uganda—Position of the Bami in 1897—Bakiwanu in Bami—Bakiwanu and Uganda—Bari along Bakiwanu—Bakiwanu (Sir Bakiwanu Bakiwanu—Bakiwanu Bakiwanu—Sir Charles Eliot's report—Bakiwanu of Uganda Protectorate in Bari along Bakiwanu—Uganda Railway—Sir Charles Eliot's report, April, 1900—The year 1900-1901—Conclusion.

[illegible] Origin of the Bami.

Little is known of the early history of the Bami tribe, but it seems to be an established fact that the original home of this people was the country between the north of Lake Rudolf and the Nile, from which area the Bami are said to have moved in a north-easterly direction in long ago that tradition does not recall any incidents of the exodus, nor the reason thereto.

[illegible] Bakiwanu and agricultural sections.

It seems, also, that there were two distinct sections of the Bami, distinct in point of habits of life and customs, though not of language or country, between which sections continual war was waged, more which left from the greater part of the traditional history of the tribe as it is known at the present day of its members. The sections are usually defined as the agricultural and pastoral sections, the former known as Ti-Ubiru, being more of low settled, while the latter was entirely nomadic, and never practised agriculture in any form. Bami tradition does not extend back for more than one hundred years, but the history of that century shows, to the exclusion of all other tribes, a conflict between these two sections, which resulted in the practical annihilation of the Ti-Ubiru, who have now ceased to exist, with the exception of small settlements found at Bakiwanu, to the north of Lake Rudolf, two villages, Gwai and Little Wamiwanu, to the south of Lake Baringo, possibly the so-called Tribe Gubu Bami, now located near Ditkana Rarian, and in Kavirondo country, and certain individual settlements of Bami among neighbouring tribes, where they have assimilated the customs and adopted the language of their protectors, and from whom it is now difficult to distinguish them.

[illegible] Sir Charles Eliot's theory.

The theory suggested by Sir Charles Eliot, is that the sexual pastoral sections cannot be considered to be primitive or very ancient, and that it is quite probable that there was a large agricultural settlement on the Upper Gubu Bami, from which the more adventurous of the warrior detached themselves.

[illegible] Bakiwanu [illegible]

It is this conflict which made the Bami name what it now and which has rendered an complete the position of the administration of the surrounding pastoral sections. The tribes dependent authority on cattle for their power of subsistence, and were driven to raiding other tribes, in order to secure sufficient herds of cattle. The introduction of the European element, therefore, deprived the Bami of their raw powers, and had the inevitable result of reducing the Bami from the first to a very low scale of economic importance among East African tribes.

[illegible] Wakiwanu.

The term Wakiwanu (Wakiwanu of Kwai) is frequently used in the early writers in reference to the Bami, but it appears that this term has, in fact, no connection with the agricultural section, being merely a Swahili reference borrowed from the Bami Kwai or Kwai, meaning plains.

Chapter III.

EXPORT OF THE RAW MATERIAL

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

"In the discussion on this question two things seem to me to have been confused :—

"1. The right of the Masai to inhabit particular districts.

"2. Their right to monopolise particular districts and keep everybody else out.

"The first right is undoubted, but the second appears to me most questionable. As a matter of expediency it may sometimes be best to make reserves but, as a matter of principle, I confess which that wandering tribes have a right to long other and superior races out of large tracts merely because they have acquired a habit of roaming over far more land than they can utilise.

"The customs of the Masai may be interesting to anthropologists, but morally and economically they seem to me to be all bad, and it is our duty, as it will also be to our advantage, to change them as soon as it is practicable. Tribes closely akin to the Masai on Kilimanjaro and elsewhere are said to cultivate and there in the neighbourhood of Naivasha seem to be settling down. It is much to be desired that the Naivasha Masai should follow the same example, instead of staying about with large herds of inferior cattle and sheep, which are reported to be of little use to the owners and of none at all to anyone else. It is also desirable to break up the tribes as far as possible, and discourage association of warriors, circumcision, ceremonies, etc., which all conduce to raiding.

"With this object it is clearly best, if practicable, to induce them to settle in small villages among Europeans, for whom they might be employed as cattle guards, etc., and I should wish efforts to be made upon this as the best solution of the question. But I quite recognise that the stupidity of the Masai or the hostility of Europeans may render it impossible and therefore we must have a reserve ready if needed. Such a reserve should not be too far off, which would mean to the Masai not being under control and I would suggest the Kedong Valley and the country to the south of it as a suitable place. If higher ground is really necessary for their cattle they might have some in the neighbourhood of Kinangop or of the Southern Mau. I never contemplated, as some people seem to have thought, that the Masai should have all the land to the south and west of the line in the Rift Valley. That seems to me too much.

"It follows from the above that the question should not be hurried and that we should try to civilise the Masai to Europeans and their ways. Applications for land cannot be delayed indefinitely and if they are not very large should be granted unless the area wanted is either actually occupied by Masai or used by them as regular reserves.

"I should like to have an estimate of :—

"1. The number of Masai.

"2. The average number who live in one village.

"3. The number of sheep and cattle which they possess.

"The Masai should beware of exaggerating their numbers, or they might be called upon to pay more hut tax."

Masai raids on the Masai.

In October 1902, Sir Charles Eliot reported a feeling of serious unrest which had been recently noticed among the Masai, culminating in preparations for a great raid on the south-western part of the Protectorate near the Anglo-German border and he ascribed the cause of this feeling to the El-Guess ceremony which had just taking place, after which honour required each young warrior to blood his spear. The Masai were informed that they would be very severely punished if any raid took place and Colonel Harrison remained for ten days at Naivasha with 100 troops. In reporting this unrest, Sir Charles alluded to the policy which he considered should be followed in dealing with this tribe. He was strongly opposed to the creation of a native reserve for them if such a step could possibly be avoided as such isolation could only tend to confirm the Masai in their peculiar ideas and customs and he thought that the only sound policy was to break up their present organisation.

Policy to be adopted in dealing with the Masai.

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12

133 Let us take the country first.

The Masai country is very markedly divided into two quite distinct regions, the southerly or lower desert area and the northerly or plateau region. The southerly is comparatively low in altitude, that is to say, from 3000 to nearly 4000 feet. It is sterile and unproductive in the extreme. This is owing, not to a barren soil, but to the scantiness of [132] the rainfall, which for about three months in the year barely gives sufficient sustenance to scattered tufts of grass. The acacia and mimosa have almost sole possession of those dreary plains, except near the base of some isolated mountain, or other highland where small rivulets trickle down, to be speedily absorbed in the arid sands. No river traverses this region, and many parts are covered with incrustations of natron, left by the evaporation of salt-charged springs. We have seen something of this lower region in the flat reach of Njiri, and the forbidding desert of Dugilani.

It is not, however, to be conceived as a monotonous level. Far from it. The colossal Kilimanjaro, and the conical Mount Meru belong to it. The hills of Geldi and the Gnano N'Ebor circle round in the form of an amphitheatre, to meet the metamorphic masses of Ndapduk and Donyo Erok. Further to the west and north are the volcanic masses of Donyo Engii, Donyo la Nyuki, and Donyo Lugwoot, with the hills of Nguruma-ni.

Except in the immediate vicinity of the higher mountains, such as Mount Meru and Donyo Engii, the country is to a large extent uninhabited. To summarize this tract we may say that it is triangular in general shape, the apex towards the north, reaching to within thirty miles of the equator, and extending beyond to Baringo as a species of trough or deep, irregular cutting. The Masai are only to be found at all seasons about such favourable situations as the base of [361] Kilimanjaro, Mount Meru, Ndapduk, Geldi, Kisongo, to the west of Meru, Donyo Engii, and along the edge of the plain at the bases of the bordering highlands Mau and Kapsik.

The country is sufficiently characterised when the fact is stated that it is a region of later volcanic activity, which in a very recent geological period has produced the cones and craters already referred to. These results of volcanic energy may, to some extent, be accounted for—though the statement may seem to savour of reasoning in a circle—by the lower region as an area of depression having subsided or sunk from the higher level of the flanking table-lands.

6:Thomson [illegible]-3 (1883-1884)1887
FL12 Masai FL12

The northerly or higher plateau region of Masai Land may be described as rising from an elevation of nearly 5000 feet on either side, and culminating in the centre at an elevation of little short of 9000 feet—although through this very line of highest elevation runs from the Dogilani plain the remarkable meridional trough which contains the charming chain of isolated lakes, Naivasha, Elmenteita, Nakuru, and Baringo; and which, at the last-named place, begins to widen out till it assumes the characteristics of the southerly plain of Masai Land. [32]

On the eastern half of this divided plateau rises, as we have seen, the snow-clad peak of Kenia—and the picturesque range of the Aberdare Mountains, which runs almost parallel with the central line of depression. A more charming region is probably not to be found in all Africa, probably not even in Abyssinia. Though lying at a general elevation of 6000 feet, it is not mountainous, but extends out in billowy, swelling reaches, and is characterised by everything that makes a pleasing landscape. Here are dense patches of flowering shrubs; there noble forests. Now you traverse a park-like country cultivated by groups of grass; anon, great herds of cattle, or flocks of sheep and goats are seen wandering knee-deep in the splendid pasture. There is little in the aspect of the country to suggest the popular idea of the Tropics. The eye rests upon coniferous trees, forming pine-like woods, and you can gather sprigs of heath, sweet-scented clover, anemones, and other familiar forms. In vain you look for the graceful palm—ever present in the mental picture of the untravelled traveller. The country is a very network of babbling brooks and streams—those of Lykipia forming the mysterious Guaso Nyiro; those of Kikuyu the Tana, which flows to the Indian Ocean through the Galla country; while further south in Kaputi the streams converge to form the Athi River, which flows through U-kambani to the Sabaki River.

Kikuyu occupies the higher areas of the eastern half of the plateau, cutting across it immediately south of the equator. Some of the higher parts are covered with a dense forest of bamboo; totally to the east of Naivasha, and between it and the Aberdare Mountains. Hence the foothill name of one rendezvous-place—Mianni-ni (Bamboo Country). [33]

The greater part of Lykipia—and that the richer portion—is quite uninhabited, owing, in a great degree, to the [34]

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

[34] [35] destruction of the Masai of that part, through their intestine wars—a fact that has caused them to retreat from the northerly districts, which are in dangerous proximity to the Wa-nik.

[13] The Masai country, so called, may be said to include the area lying between 1° N. lat., and 3° S. In breadth it is very irregular; but if we say that the average is ninety miles, we shall be pretty near the truth. In this, however, we are including several isolated areas occupied either by tribes wholly different from the Masai, or by the agricultural Wa-kwafi, who are more off-shoots of the Masai.

[32] The rainfall is very small over the greater part of this large area. Only an approximate guess, of course, can be given—but I think I am within the mark in placing the rainfall of the lower desert region at fifteen inches, and the higher plateau areas at from thirty to forty inches in the year. During the fourteen months in which I travelled in that region my caravan was not caught ten times on the march by rain,—a striking contrast to my experience in the region further south, where, for weeks together, rain was imminent. The rains are almost entirely confined to February, March, and April. The consequence of this insignificant rainfall is, as we have seen, that the lower plains are practically desert, though the soil is of the richest nature. There are absolutely no marshes, with their physical discomforts and poisonous exhalations breeding disease and death. The air is dry and invigorating, and though the days are hot yet the breezes blow with refreshing coolness, and a night of low temperature—and even frequently of intense cold—braces one up for the fatigues of the parish day. The contrast, indeed, is felt to be just a little too great, when you rise, shivering, in the morning, to see the grass covered with hoar frost, and then in the afternoon find yourself perspiring in the shade of a cotton, under a shady bush, with the temperature above 90° Fahr. The air, however, being so dry, I felt no inconvenience from these abrupt changes, and it was simply wonderful to see how the men would lie in the open air without a shred of clothing, and with the temperature at the freezing-point.

At the high altitudes of this plateau region, hailstorms of very great violence are of frequent occurrence, more particularly in the neighbourhood of the Aberdare Mountains. More than once caravans have been overtaken by them while on the march, and great numbers of the men killed by the

6:Thomson R-3 (1883-1884)1887
FL12 Masai FL12

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Njiro, where they had to bow themselves to the ordinance of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Gnar' Ngiako. The Masai swept from north to south, and left not a man in the native land, those who escaped the spear and sword finding refuge in Kavirondo.

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a native of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the boughs. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The results were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expressions of repose as they contentedly chew the cud. For my such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

955 was not even put through the lowers of the ish. Sometimes, however, his mother, in a fit of affection, and indeed
505 with the belief that some day he would make a name for himself as a member of skulls and a lifter of cattle, would make up an unknown and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

955 And so life went on, and he was promoted to the rank of
501 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
504 leaving the bare quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

957 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[961] occupation. He had by this time acquired some notions of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[971] these occasions conveyed their household gods, though his
[972] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and also down in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion.
[976] He learned something of the mystery of the unknown by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngai (God, or the heavens). He heard also that the place of Ngai was among the eternal snows of Kilimanjaro, or that the thunders of
[979] Donyo Ngai (an active volcanic mountain) were His voice.

It is very pleasing to think of Mawa at this period reclining under a bush or standing watchfully over his flock
[979] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the whence, whence, and whither of life. We can imagine him appeal-

elephant is attacked at close quarters, the arrow part driven into the great brute, and being loosely fixed in the handle, it remains when the latter is withdrawn. Another arrow is then affixed, and the same operation performed. It is said that an elephant will live a very short time after being thus stabbed, and entire herds are killed without one escaping, so dexterous and daring are these hunters. The Andorobbo also use the ordinary bow and arrow, but only for the smaller game.

CHAPTER XI.

THROUGH KAVIRONDO TO VICTORIA NYANZA.

M 101 194

The people (Wa-kwafi) of Njempe presented an interesting study to the observer as throwing light upon the origin of the various small tribes which people Africa. Unquestionably Masai in race, and only separated from that tribe through the loss of their cattle and the consequent necessity of breaking their cherished convictions by cultivating the soil, they had developed new ideas, manners, and customs in a comparatively short period.

M 145 184

They did not by any means supply an argument in favour of the capitations; for in personal appearance they had distinctly degenerated, and could not for a moment compete with their aristocratic carnivorous brethren of Lykipia. This was especially noticeable among the women, who had lost their slender, graceful shape and acquired the ill-proportioned, unwieldy contour of the negress. Perhaps an exception might be made in favour of the young women, many of whom were well-formed and characterised by most pleasing and interesting manners.

M 361

The colony consisted of two villages—Njempe of Ganao Tigirish, close to our camp, and Njempe of Ganao na Nyuki. The houses were of the beyook order, with fences beneath the level of the ground, very small and badly built. They were surrounded by a double fence of thorns, which, however, are a greater source of danger than of protection, as in this dry climate they become like tinder, and consequently can be set on fire easily. If this were done at several points simultaneously, the inhabitants could easily be burned to death.

M 342 351

M 184

In a very sort of way they tried to keep up the distinction

on the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) "without the assent of the paramount chief and the representatives of the Masai tribe." 631 648

As a people of Nilo-Hamitic origin, the Masai have no affinity to the Nandi, Kipsigis, Suk and Turkana of the Kenya Colony, but they have maintained more of their original customs and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the nature and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions been assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their enrolment during the War of 1914-1918. 101 648

The social structure of the Masai has from the outset created an obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (ololi) living in separate villages (manyatta) often of a considerable size, and the larger manyatta had their own "Councillors" (L'Aigonak) chosen from among the Moran. 631 [141] •

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligations save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe or periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, "drank milk" and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, "the Elders' idea of existence seemed to be ease, not unmixed with drunkenness."* Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare. [134] [125]

There is another feature of importance in the social structure. The Moran are divided into Sections (Kindas) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most sensitive. Each of these Sections has its own Age Grades, so that the period at which youths become Moran, or Moran become Elders on the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation 639 [125]

* Introduction to The Masai by A.C. Hollis, 1905. For the significance of the E-unoto ceremony see page 65 of the Administrative and Political History of the Masai quoted above.

is called an *ol-oroi*. The boys may carry knives for defense but not spears, for it is said that a spear is a sign of force, and their quest is a peaceful one. Each boy must carry a bow, for the bow is a token of peace. Furthermore it ensures that any reasonable request the boys may make during the *ol-oroi* will be granted. No Masai may refuse the request of one who carries a bow in his hand. The boys take no arrows with them. They visit all the principal villages and in dance and song they announce the object of their visit. They then seek out all the bigger boys of the village and add them to their number. If they wish to spend a night at a village they beg an ox for food from the elder of their sponsor's age-group. Elders of other age-groups present them with milk to drink. In this way the news is spread far and wide and finally the boys, now of considerable numbers, return to the elders who dispatched them, taking as a gift a large quantity of honey. Then a special village is erected in which only the boys' sponsors and their families may live. The boys borrow ostrich feathers and lion mane head-dresses from the warriors and on the appointed day they collect at the elders' village.

The ceremony commences with a dance called *enjikata*; for this the boys form three lines, one wearing ostrich feather head-dresses, the second wearing lion mane head-dresses, and a third, of boys who have decorated their bodies with broad stripes of white milk to resemble zebras.

The latter must be quite nude; those who wish may wear thigh-bells. They may not carry weapons of any sort, but each carries a thin wand, the length of a spear. After much dancing, the boys form a procession and walk round inside the circle of lines following two leaders, one of whom blows a Kudu horn from time to time. The procession then halts and the leader prays aloud to *Engai Narok* —the Black God, to shower his blessings on the boys. This prayer has been taught them beforehand by the elders, some of whom stand by and prompt when necessary. When the prayers are over, the elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return is then made to the village and the elders bring a fire-stick, the one called *al-piron*, also a male circumcision knife and a small dead bird. This bird may be of any kind other than a dove. The elders break the fire-stick before the assembled boys. They then place a cross upon the circumcision knife and taking the dead bird they break one of its legs and pierce one of its eyes—presumably as an indication of the ill which will befall any boy who dares to be circumcised before the cross is taken off the knife.

In this way, the elders formally lay claim to the ownership of a new age-group. From that time the boys refer to their sponsors as *Il-piron*, whilst the elders refer to the boys as *Il-piron*.

another rule! Sometimes circumstances prevent the immediate use of medicine obtained: a drought for instance might make it impossible to collect people for the ceremony; in such a case the shaved might get old and lose its efficiency, or perhaps the object of the use may be forgotten. If this happens the medicine is conveniently mislaid or is thrown away, but if an report must be made to the medicine man, for he will have seen what happened to his medicine and will be angry, if the fate is concealed from him.

After some years the boys are circumcised, and become mature warriors. As soon as most of them are circumcised the inspector plan to form into separate companies in readiness for raiding in warrior villages called *inorogati*. Messages are sent and the warriors of all clans are called together by means of an *olawuai* just as the boys did before the *endorgoro* ceremony. The number of companies, called *i'ewi*, to be formed, also the names to be given to them are decided on beforehand by the inspect warriors. After discussion a division is decided upon. One warrior representing each company to be formed leaves the assembly, goes a little way and striking the butt of his spear with his club to attract attention, he calls: "*Ko ale Il Molodo*" or "*Ko ale Il Tatiwat*" "..." This way the Molodo, this way the Tatiwat." The warriors then rise and join the man calling the name of the company they wish to join.

Groups of five will go together, to join the same company. A company may include warriors of more than one clan though as a rule the majority are of the same clan.

If the warriors of one clan are too few to form a separate unit they join the unit of another clan. If the clan is a very big one, the warriors may form two or even more units. Having joined a unit a warrior may remain at any time before that unit forms the first warrior village. Once the warrior villages are formed, any warrior who leaves one any to join another, incurs the bitter resentment of the others. In some cases a fine of cattle is inflicted.

The girls now formed, the warriors now approach the *Ilpiron* elders with a view to holding the ceremony of *Orilog*—without which the first warrior village or *enanyata* of new age-group may not be created.

The *orilogori* ceremony or the breaking of the fire stick, though it effectively holds up the circumcising ceremonies, is not finally binding. It sometimes happens that the medicine men decide that a left-hand circumcision shall be held, in which case all the boys, the *Il piron* planned to make their special men, will be late to them, for the boys will be circumcised to have one age with the ——— or right-hand circumcision moran.

When blood money is paid, it is less what the

payment is between clansmen. The logical extension of this principle is that when cattle are due from one member of the clan they may be taken from any of his clansmen. This is in fact the rule for payment of compensation amongst the Masai, though the offender and his near relatives naturally pay more. In the one case of blood money in which details were obtained, members of sub-clans other than that of the murderer contributed, and it is, therefore, safe to calculate that clan responsibility and solidarity applies to the whole clan in greater degree than it does to the sub-clans. 679 692 681

2. Family unions — the boma system — the 'gate' — polygamy — marriage statistics — number of cattle to each gate — relations in law — travelling — ritualism — economics.

Briefly, the Masai live in groups of families, usually three, four or five together, in a village comprising a ring of huts, built immediately inside a circular fence, which this forms an enclosure for the cattle. Such villages are usually built some two or three miles, frequently more, from the water which the cattle use, so that it is unusual to find more than two or three homes in close proximity. Frequently a home is a mile or more from its nearest neighbour. In the village each family possesses a separate gate, experience round which its members are grouped. 361 621

It is difficult to define a typical family or 'gate' unit. The ideal of a Masai elder is to possess half a dozen wives with many children, ranged on either side of his gate. As he marries he places the first on the right of the gate, and the second on the left; when a third wife comes to the kraal her hut immediately to the right of the gate, and the fourth immediately to the left, the earlier wives moving round accordingly. Each wife on arrival is given a number of cattle, which are here to hold in trust for her children. She is also given, for tending, some of the unallocated cattle which the elder holds in reserve for future marriages; such cattle are termed *engaiko* e *kes*. These living to the right and the left of the gate form two distinct groups, *nakiserita*, and for the purpose of inheritance, should a wife on the left die without male issue, her cattle will be inherited by the senior male on the left of the gate; they may in no circumstances be taken by an heir on the right as long as there is a son on the left to inherit. 592 595 [928]

When the sons are circumcised, they nominally take over the guardianship of their mothers, and if the cattle allowed to her. In the old days they would move off with us to the *manyatta*, warriors' village, but this is less frequent now. As boy approach adolescence, however, in polygamous families the sons of those claim their patrimony and move off with their mothers, to form a separate gate in some other boma. More frequently they show little desire for this responsibility, and spend the greater part of their period of warriorhood wandering round the countryside, or living in manyatta in the bush till pull. Once they become elders it is exceptional for a son to continue to live with his father, except when the latter has varied wealth. 571 592 [94]

This is the theory of the gate system, but in practice it varies very considerably from the ideal. Polygamy (see below) is limited by the 595

551
541

foreskin. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *kidutwa* and are free to go anywhere "like women," and, in fact, may even visit the *manyatas* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *ceiapulos*, which are danced by the novice class.

[535]

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each lad has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a cow for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior.

551
541
552

[551
541
554]

The new warriors now form themselves into groups, and organise the building of villages, which will be their headquarters. These villages are the *manyattas* of the warrior groups (see below).

[57
551
541

Part III.—Warriorhood.

The Age-Group System.—The general word denoting an age-group is *ipuriaini*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single *ea-eating* ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *jenjimdoo* and *ewanyipilonga*.

[57]

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *jenjimdoo* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *jenjimdoo* and a *ewanyipilonga*, must move out together, leaving the next *jenjimdoo* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *ewanyipilonga*, and in due course yet a third group will be initiated and enter the age-group as *jenjimdoo*, after which no further transfer of a novice group can take

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

place until the two senior groups move out together into the elders' class. The result of this arrangement is that no group which enters the warrior class as morangalanga ever stays in the warrior class for as long as any *junior* group.

Manyatta.—During their time of service in the warrior class the members of each age-group live in special villages built away from the main married men's villages. These villages are temporal, in that all the warriors of a single age-group in a single area live in one such village. Warriors of different age-groups never live in a single manyatta, as each manyatta is essentially the headquarters of the members of a single age-group in the warrior class in a given area. *Manyatta* are moved about from place to place when fresh grazing is necessary.

A manyatta consists of a number of huts each one of which is built, and lived in, by the mother (or another married woman relative) of one of the warriors of that manyatta. Normally each warrior has his own mother living in the manyatta and she is accompanied by her children, especially by some of the man's unmarried sisters and half-sisters. The elder women are there to do the work of the manyatta, such as milking, fuel gathering, water drawing, etc., and in this they are assisted to a certain extent by the girls, but the latter are chiefly in the manyatta as companions and lovers for the warriors. No girl can live at a manyatta at all unless her brother or half-brother is a member of that manyatta, and each warrior living at a manyatta is expected to bring two or three of his sisters or half-sisters to live at the manyatta, and if possible some of them should be fully grown up and others quite children who will grow up at the manyatta.

Sex Life.—During the warrior stage no man may have sexual intercourse with any unmarried girl or with married women, but on the other hand, there exists in the manyatta a system of sex life which is decidedly interesting. The warriors, whenever they feel like it (which, as my informant pointed out, is "very, very often"), invite one of the girls (sisters of the other men in the Manyatta) to sleep with them. This is done by a method and formula which corresponds in some ways to the custom of the Kikuyu peoples, but has certain marked differences.

A group of warriors at any time of the day will stand outside the village and call to any of the girls whom they see about, and when they come they say to them *mtoto*, and the girls then each select one of the men, and say "I choose *na-ni-ni*," not mentioning the man by his own name but as "the man of *na-ni-ni*." By so doing the girl binds herself to go and sleep with the man so chosen that night. It is a point of honour and etiquette that no girl so called upon to choose a man may refuse to do so unless she is (a) actually at a menstruation period at the time, or (b) has already promised herself to another man for that night, but she may make her choice from any of those men who were in the group that called to her.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

561 the nine days the elders in charge of the ceremony go about looking out for two
34 warriors from the group noted for their humility and honesty, and having selected
them they keep their names very quiet, as the position for which they are being
chosen is not at all sought after. In fact, as soon as the selection has been made,
the relatives of the two men chosen are heavily bribed in order that they shall
allow them to be appointed.

561 *Shaving Ceremony.*—On the tenth day of the ceremony the heads of all the
604 warriors of the age-group are shaved, and during the shaving the elders come and
point out the two warriors whom they have chosen, and publicly proclaim them as the
[308] heads of the group during its time in the senior warrior stage. These two men are
called respectively *olaiunot* and *olkiruaqnos*, and there are certain very strict
regulations and restrictions attached to their position, the breaking of which would
result in punishment by death; hence the unwillingness of the warriors to be
chosen for these appointments, and the bribing of their relatives. Unfortunately,
no information about the duties of these two, or of the restrictions which they
must observe under penalty of death, could be obtained from my informants. After
564 the shaving ceremony is over and these two have been appointed, the warriors go
back to their normal life; but before doing so they first go all together for a few
nights to a new village built for the purpose called *ngang'ungwiki*, and from there
•[561] they scatter to their own districts. They may not, however, return to their old
occupation, which they resumed when they came to the *Emuria* ceremony, but must build new occupation.

Becoming Elders.—The length of time spent in the senior warrior class depends entirely upon whether a man belongs to an age-group called *jangiwuder* or *ewangiwuang* (see the *Age-group system*). Transfer from the senior warrior stage to the Elders' stage takes place as a group transfer, but one age-group cannot transfer alone, but always two groups, a *jangiwuder* and a *ewangiwuang*, must transfer together. No transfer, therefore, can take place until there are two age-groups in the warrior stage who have gone through the *Emuria* ceremony. Once there are two such groups in the senior stage the actual time of transfer is dictated by whether or not there is a new age-group waiting in the junior stage ready to move up into the junior warrior stage, for as stated above (see the *Age-group system*), there may never be more than three age-groups in the warrior stage at one time. Equally no two warrior groups may move out into the Elders' stage until there is a new age-group in the warrior stage, as otherwise it would mean having a single age-group alone in the warrior stage for too long, and this would be a serious thing when only the warrior groups are the fighting forces of the tribe. The actual transfer from the
[591] senior warrior stage to the Elders' stage takes place without any ceremonial, and the men just leave their occupation and go and live with their wives, with whom as yet they have never lived, although the wives may be mothers with several children (see Marriage).

Breach of No. 2.—A married man who breaks this regulation and is found out is very severely punished, the punishment being left to the women of the village, who have the right to beat(illegible) and seize all his cattle.

Breach of No. 3.—The punishment for this is as for a breach of No. 2 as long as the woman is consenting, and likewise the man must take her to the aggrieved husband to avoid a curse.

Breach of No. 4.—A man who breaks this regulation is held to be solely responsible, as guilt whatever attaching to the woman. In this offence (intercourse with a member of one's own sub-clan) in the worst possible, the penalty is very severe indeed. Every animal the man possesses—cattle and sheep alike—is hereby seized and otherwise seized and left to die, and if the man can be caught he is so severely beaten and maltreated that he is almost certain to die too.

The Marriage Transaction.—The usual number of animals considered as marriage settlement are:—

2 Bullocks.
1 Ox.
1 Ewe yearling.
1 Ram.
Also honey here in large quantities.

Of these, the ram is slaughtered by the mother of the bride, who is assisted with the fat.

When a girl who has received Initiation is being married by a man other than the lover who was responsible for her condition, only one heifer is given (instead of the three mentioned above) at the time of the marriage, but the other two heifers must be handed over at such time as the first of her children is initiated.

Part VI.—Parent Love.

The Relation of Parents to Children.—As already indicated, a man's legal children among the Masai are—as often as not—only his by virtue of his being the husband of their mother, and quite irrespective of physical parentage. Nevertheless, fathers are very proud of their children, and take considerable interest in their welfare. They must always be present at the initiation of a son or daughter, and feel very hurt if for any reason they are prevented from doing so. When a son grows up and eventually forms a village of his own, his father and the other men of the village who belong to his father's generation may not come and live at the new village until one of these has been presented with a heifer called *ekiaa* by the young man.

As stated above, Gi Fana means a Scottish. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Gi Fana* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has constituted political as well as domestic importance. 561

Mangatos.—The *ení* is the unit for a single mangato, except when the whole age-group of a single area combines to form one mangato for some ceremony, *e.g.* the *Gi Chuma*. 561 561 648

For some years the policy of Government was directed towards suppressing the mangato system, and mangatos were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the mangatos are now commonly allowed, to have mangatos provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to marriage, and it is now rather difficult at times to know exactly what these were. The main political effect is that marriage lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 561 [illegible] 561

Nowadays the parents are somewhat unwilling that the girls should live in the mangatos, and as there are only a few of them to be seen there.

A mangato usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey *matabiko* would perhaps best be spelt as two words *ومتابيكو* [illegible]. *ومتابيكو* is a second person singular imperative of a dative verb (see Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *ومتابيكو* means "no" or "no" 736 [illegible] [illegible]

When a man has been accepted by a girl who has been so affianced he usually tells not his hand to live with the rips of his bandages and thereby touching to bring a child. She is then supposed to break the circle so formed with her bandages. This is regarded as making her acceptance binding. [illegible] [illegible]

It is a great disgrace for a warrior to cause an unmarried girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 892 [illegible]

The Gi Chuma Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Gusii, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 561 [illegible]

The Lolo and Sirio B-Cwate ceremony took place in July, 1930, and lasted three days. They invited me to it, but, owing to pressure of political work, I was unable to arrive till the morning of the third day at about 10 a.m. (Pl. XXII, Figs. 1-3, and Pl. XIV, Figs. 1 and 2).

The Manni definition of the B-Cwate is as follows:—

"The B-Cwate is a religious ceremony of blessing of the age-group, after which the warriors have leave to marry.

"The O-Siapire gives the warriors permission to have sexual relations with initiated women."

The warriors were dancing at the time (Pl. XXII, Figs. 1 and 2). After about an hour they went off to a spot about a mile away in the forest, where I was informed that they sacrificed a bullock as a charm.* They returned about 3.30 p.m., about twenty of them being dressed in a manner similar to that of the three functionaries (Pl. XXII, Fig. 3). They danced round the O-Siapire hut, and those warriors who were entitled to enter it led their families up to meet some new-dong on it. The warriors then squatted down in a close group in the centre of the compound, while some elders walked round them drinking honey wine and spraying it out of their mouths over the group as a blessing. Others of the elders sat by the O-Siapire hut and refreshed themselves with honey wine. It was at this point of the proceedings that the age-group of warriors was named *Ivinsiin* (from verb *ariin*, pierce). This terminated the festival.

The chief functionary is the O-Ibone, but I cannot say what part he takes, having arrived so near the end of the ceremony. He is held in great reverence for some afterwards, and it is unlucky for the age-group if a mishap befalls him. He must not take part in political affairs. He is always spoken of as O-Ibone, and his son, where he grows up, is known as the son of O-Ibone. (Pl. XXII, Fig. 3.)

There is a minor official called O-Ilier *engine*. *Engine* is a thong of leather. If my spelling of the first part of the title is correct it would perhaps mean "He who splits the thong." But there are several words from which it might derive, and I have no knowledge of the Latin to assist me in checking my spelling of the name.

O-Siapire (Thingira).—Being ignorant of Kikuyu I had been puzzled by this word prior to reading Mr. Leakey's article. At the Lolo B-Cwate it was built just within the outer edge of the village. The village consisted of a circle of huts about 300 yards in diameter. I looked in to the O-Siapire, but it was too dark to see anything. It was made of cow-dung plaster like an ordinary hut, but was much bigger. Ranged against the wall outside were the heads of numerous cows which the warriors had slaughtered.

I was informed that 100 of the warriors had not had sexual relations with initiated women and could therefore enter the O-Siapire. After the B-Cwate the

* Masai, Swahilogic the general word for a charm.

[64] The name of the main group Loodo mongi is very liable to be confused with that of the sub-class Loodo Kisho because the former means "the blood red bullocks and the latter the blood red cattle."

It is further difficult, if not impossible, to know whether to treat some of the divisions as clans or sub-clans.

The two words used by the Masai are Ol piron (the clan) and Ildikironi (the sub-clan). But these words are not much help to the enquirer, because the Masai use each to some extent interchangeably.

Hollis, p. 300, speaks of a group of Masai called L-Oikop or Ol-Lumbwa. I have been unable to discover these people. The tribe called Lumbwa, which lives to the west of the Masai area, is quite different in language and customs from the Masai, being similar to the Nandi.

[65] Some clans are associated with certain totems as under :—

L-Kiaro (Ol-Dumasai-Orok) (the black ostrich), L-Laplumasai (Ol-Ingai-Orok) (the blue black ostrich), Il Dorsanto (Ol-Ingai-Sero) (the brown ostrich), Il Molelian all totems.

[66] *Adoption.*—The Masai like to adopt children, and even grown men, of other clans and other tribes, who may help them to herd their cattle. Of recent years they have also shown a tendency to adopt Kikuyu cultivators to plant maize for them in the more fertile areas Narosi Gagem and Il Gelli, west of the Rift valley. [67] [68] An adopted person is called O-Ilaga. Having been adopted he is regarded as being a member of the family and clan of his adoption and has nothing to do with his former clan. He may even marry a woman of the sub-clan of his natural father, provided that it is not also the sub-clan of his adoption. But he may not marry or have sexual intercourse with a woman of the sub-clan of his adoption. Accordingly, an adopted Kikuyu may call himself a Masai, and even though he may be unable to speak the Masai language he is not telling a lie according to Masai ideas.

When a man or boy is adopted as a herdsman he is treated by the head of the family as one of his own sons. He is given his herd of cattle and is helped to marry a wife. But if or when he wants to leave his adopted family he must go empty handed as he came, having left behind his each cattle, wives and children as he may have acquired under adoption.

[69] An adopted man takes an inferior position socially to a well-born Masai. He would not in practice hold any important position in the tribe nor be able to marry a well-born Masai woman.

[70] [71] *Inheritance. Arrangements of Wives' Huts.*—Before dealing with inheritance it is necessary to explain briefly the arrangement of huts in a village in order that the terms "right of the gate" and "left of the gate" may be understood.

D. Inheritance Fan.—Further Fans on the Women of Kenya Colony. 109

Each man of property has one or more village gates through which his herds enter and leave the village. His first wife builds her hut on the right (looking towards) of her husband's gate, the second wife on the left. The third wife will build next to and on the right of the first wife, and the fourth wife next to and on the left of the second wife.

The diagram below (Text-fig. 1) shows a village belonging to two elders, A and B, with the positions of their gates and of their wives' huts in relation thereto.

When a man marries his first wife he hands over to her a portion of his stock, perhaps half, to look after. He hands to his second wife a slightly smaller herd and the first wife may sell a few from her portion. The third and fourth wife receive their portions from the first and second wife respectively, and the husband may also

(fig. 1)

contribute a few. The fifth and subsequent wives receive a few cattle from each of the previous wives in order to form a herd.

Inheritance (Ba Dakenki).—When a woman has a husband alive, and at the same time a son who marries, she gives some cattle to this son, and they then become his property. On the death of the head of the family each wife divides her portion among her sons. If a wife is already dead her eldest son divides her portion among her sons.

The cattle from the portions on the right side of the gate cannot pass on inheritance to the left side unless there are no sons of the wives on the right, and vice versa. If a man dies without male issue his property goes to the nearest male relations in his sub-clan. If the first wife has no sons her portion is inherited by the sons of the other wives on the right of the gate. A man may bequeath

Ol Odokwenkor — The Tweedsee and hot month dates.
Ol Gingiroj — Light showers and hot month dates.
Ol Pusuori. Showing unknown and hot dates.
Ol el Jiboi Jiri — The month of the white water

The following are the days of the month :—

1. *Ol Kunkir* — Full moon.
2. *Ol Gingori* — When it rises green.
3. *Ol Ongoki* — When it rises red.
4. *Enkitok Enkerenge* — The beginning of the moon.
5. *Enkitok Ol Gyenoon* — They wane the moon (?)
6. *Enkitok e Enkirkiro* — The red moon (?)

The other days are not named. But one may refer to a day as, for example, " the eighth day of the moon," that is, counting from the time when the old moon disappeared. The dark days between old and new moon are called *Ensimia* — the darkness.

FIG. 2.

Enkaikiliag.—The Maasai frequently move from one place to another in order to seek the best grazing and water for their cattle. They are therefore constantly deserting old villages and building new ones. If time permits, after the day's march is over and before darkness sets in, each woman sets to work to build a hut, even if it is only to be occupied for one night. 341 342

She first cuts a number of straight sticks about 5 feet long and brings them to the place where she wants to build. She takes six of these sticks and marks out an oblong about 5 feet by 8 feet with them and places little blobs of cow-dung (*Emakiki*) round it at 9 inches or 12 inches interval (Text-fig. 2). She then drives a hole in the ground through each blob of cow-dung to a depth of 12 inches or so with a pointed stick called *Enaserir*. The cow-dung lubricates the point of the stick and makes it easier to pierce the ground. The holes slope slightly outwards from bottom to top. She then drives an upright into each hole, after which she binds the tops of the uprights to a plant wand which runs all round horizontally, leaving every fourth or fifth upright unbound. 343

12: Fun G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

are ready for one night's occupation. Text-fig. 3 shows its ground plan. It takes 342
two to three hours to build. If it is to be occupied for some time the walls and roof
are strengthened and the hides are gradually replaced by cow-dung plastered on a
backing of *Lokolom* leaves or other suitable vegetable material. The whole, including
the cattle pen, is enclosed and sealed with cow-dung plaster. A small hole (*E-Lempe*) is
usually made at the top of the wall above the fire-wood store to let out some of the
smoke. The beds (*En-Dabash* or *E-Ruat*) are made of hides put on top of poles 352
placed close together and raised about a foot from the ground. Text-fig. 4 shows
the ground plan of a finished hut.

Grass tufts on the floor are just left to dry up and get trampled out of existence. 342
Repairs are done by the women of the house, and consist in filling up cracks with 356
wet cow-dung. Fleas, bugs and rats are uncommon in Masai huts. Dried puff-balls [451]
and dry cow-dung are sometimes burnt as an insecticide. The young people are 515
not infested with body lice; but these abound on the aged, taking refuge in bead
necklaces and other ornaments.

When the people move on the village is usually left to fall into ruin, but it 361
may be occupied later if desired, and if it has not yet fallen beyond repair.

Nandi: FL13
Tatoga FN26

Il-Wuasin-kishu Masai (Uasin Gishu) lived till they were broken up about 1890. The Nandi tribes are surrounded by other Nilo-Hamites (Karamojong, Turkana, Masai) on the north, east, and south, and by the Bantu Kavirondo (AbaLuhya) and Hilotic Kavirondo (Luo) on the west.

Immediately to the east of the Nandi group lies the territory of the Masai (Group II), in and on both sides of the Rift Valley, stretching from Samburu in the north to about 6° south in Tanganyika Territory. In the north are the Samburu (Samburu) and, formerly, the Il-Aikipiak (Laikipia) east of the Rift Valley, with the old Uasin Gishu country enclosed by the Nandi west of the Rift. To the south of the Il-Aikipiak are the central Masai, comprising the Il-Kisonjo extending right across the Rift Valley, the Loitai and Siria west of the Rift Valley, and the Il-Kaputei. These are the Kenya Masai. The country of the Tanganyika Masai, consisting of the Il-Kiaonko and Il-Arusa, lies between Longarion on the west and Kilimanjaro on the east, narrowing as it goes southwards. There are settlements (*in-kuenan* – farms) of the agricultural Masai from Lake Natron southwards. The Masai are bounded on the north and north-west by tribes of the Nandi group and by the Turkana; on the north-east by the scattered Randile and Boruma; on the east by the Kikuyu and Kamba, Caga, Pare, and Shambaa (all Bantu tribes); on the south by the Bantu Kaguru and Nguru; and on the west by the Iraqw, Burungi, Sheshi, Kerya, Gonji, Kipsikis, and Nandi, and by a short stretch of Bantu Kavirondo between Nandi and Elgon: the Nandi and Bantu Kavirondo were the neighbours of the Il-Wuasin-kishu who now no longer live here.

Scattered over the highlands are the Dorobo hordes (the *Dorobo division* of the Nandi group) which are found in four main concentrations: (i) Western, in the Mau forests (East Mau, West Mau, Ravine, Loldiani, Timdiret, and Kipkomwek hordes); (ii) Central or Rift Valley (Dundule, Saleta, Kidong, and Digiri hordes); (iii) Eastern (hordes on the slopes of Mount Kenya and Kisima); and (iv) Southern, consisting of the Mosiro of the Talamai hills east of Kibaya in Tanganyika Territory. The Dorobo hordes are thus in contact with Nandi, Tukem, Keyo, Kipsikis, Masai, and Kikuyu: in spite of this, their language is in all cases a dialect of Nandi, though in some places where they are losing their identity (as in the case of the Kidong) their Nandi speech is being forgotten and is in process of being replaced by Kikuyu.

The *Tatog division* of the Nandi group is separated from the nearest Nandi-speakers (the Kipsikis) by 200 miles of Masai territory. The Barabaig (Burabaik), the only tribe of this division of which we have any detailed knowledge, occupy the country in the triangle formed by Mount Hanang and Lakes Basotu and Balangida south of Lake Eyasi. They live in an enclave surrounded by Nilo-Hamites (Masai) and Bantu (Kaguru, Gogo, Nyamwezi, and Sukuma); in this enclave live also the Bantu tribes Isanzu, Nyiramba, and Nyaturu; the Bush people Hadzapi; the Sandawe; and the unclassified though supposedly Hamitic Gorowa and Iraqw.

The Hadzapi, Sandawe, Iraqw, and Gorowa are grouped together here as "unclassified" (Group III) in order to bring them into the Survey, for they cannot otherwise be easily fitted in, having no known relationship or specific cultural affinities with any other East African peoples.

All the Southern Nilo-Hamites are pastoralists, though most of them except the pastoral Masai practise a certain amount of agriculture. The Nandi group are mainly people who live in hilly country, though they are not mountaineers, and their land must be such that cattle can be kept. The Masai on the other hand are plainsmen and accustomed to open country. While the Nandi tribes lived and fought in all kinds of country, not minding bush so long as it was not too thick for cattle, though they avoided forest, the Masai were at a disadvantage once they got out of the open country. The Tatoga are also (it would appear) plainsmen. The Dorobo are forest-loving hunters, till recently dwelling inside the forests; they have shown a tendency to become pastoralists with some agriculture. The Hadzapi are "Bushmen," inhabitants of bush country, and like the South African Bushmen have shown no sign of changing their way of life. The Sandawe are hunters who have

13.Huntingford E.-4 (no date) 1953 FL12 Masai FL12

Kiteto, some 50 miles south of Kilwa in Tanganyika. The most northerly Masai were (and still are) the Samburu, who in 1899 extended more than 120 miles northwards towards Lake Stefanie. This vast country, with an area amounting to some 80,000 square miles, now reduced to one-half its original size, has great variation of altitude, climate, rainfall, and vegetation. There are three vegetation zones: the hot or northern has desert scrub and a desert type of grass; the second or medium zone has thorn bush and medium grass; the third or highland zone has evergreen forest, parkland, and tall grass. In Kenya, the altitude of Masailand ranges from 3,000 to 9,000 ft., though in the highlands which lie between Mount Kenya and Elgon in zone 3 the land in some places rises to 10,000 ft. Most of the present Masai Land Unit is in zone 2; part of the extreme southern territory of pre-European times is in zone 1. In Tanganyika, the Masai territory is at a lower altitude, ranging from 2,000 to 4,000 ft. and including the isolated mountains Kilimanjaro and Meru. Much of this country is unfertile, and belongs to zone 3. In Tanganyika Masailand, there is one permanent river, the Ruvu or Pangani, on the eastern boundary; there are a few seasonal rivers, but for their main water supply the Masai depend on wells, water-holes, and springs. Since only the third zone is well watered, and most of the Masai live in zone 2, their life is conditioned to a great extent by the water quest, and in the worst areas a form of transhumance is practised. In the present Masai Land Unit in Kenya, the rivers are few, and the rainfall low. Most of the few large rivers run close together in both country unless for grazing; the main rivers, too, rise in the Mau and unite low than halfway across the Land Unit in our sources, the E-waso gyro. There are no lakes except the salt lakes Magadi, Natron, and Hanyara, though in the northern part formerly occupied by the Masai is the chain of lakes Baringo, Hannington (salt), Solai, Nakuru (salt), Elmenteita, and Naivasha. The Rift Valley, in which these lakes lie, runs right through Masailand from south to north. In many places the floor of the valley is a wide grassy plain; in others, as in the Kerio Valley, it is narrow with high precipitous walls. The rainfall is low, the average for the eight years 1913–17 and 1920–4 at Narok being 19 ins., with a range of 47 ins. to 12 ins. It is recorded that at Longido in one year there fell only 8 ins., three of them in one night. With such a rainfall, grazing cannot be anything but scanty. The average rainfall recorded by three gauges in the Masai steppe between Kilwa and Arusha for nine years is 24.4 ins. There are two seasons, the dry weather from June to November, followed by short rains in November and December, after which there may be rain in January and February (January: 1915, 0.80 in.; 1916, 4.20 ins.; 1917, 8.44 ins.; February: 1915, 1.46 ins.; 1916, 5.09 ins.; 1917, 5.23 ins.; though in 1918—a dry year in Kenya—there was only 0.28 in. in February). The dry weather is called "the months of hunger" by the Masai. The recognized wet season is from March to May, "the months of plenty," though small amounts of rain may fall in other months, notably June to August, which are called "the months of showers." The figures given for Kenya refer only to Narok, and in the more arid parts there is not only less rainfall, but the small precipitation out of season has little effect on grazing or water supply. Except in the highland zone, where there is some seasonal variation, day temperatures vary only between 60° and 65° F.

MAIN FEATURES OF ECONOMY

SETTLEMENT PATTERN

In dry weather the cattle graze round the permanent waters; in the wet season the cattle are driven to the temporary waters that form, leaving the grass round the permanent waters to rest. In both seasons the kraals are built a few miles from the water supply. On one day the cattle are taken to drink, and on the next day they

are taken in another direction, which means that they drink only on alternate days, but at the same time graze over a larger area than if they went to water every day, thus helping to conserve the grazing. There are two types of kraal. The married men with their wives and children live in one type, and the warriors with their mothers, sisters, and girl lovers in another type. The main structural difference between the two types seems to be that the warriors' kraal has no fence, while the elders' kraal is surrounded by a thorn fence. The elders' kraal varies in size: it may contain from seven to several hundred huts, though very large examples (such as were seen by Tobbi and von Höhnel) are probably uncommon; the average is probably about 20 to 30. The warriors' kraal may contain between 30 and 100. In the elders' kraal the huts are built round the inside of the fence, which is also the enclosure in which the livestock are housed at night. The number of gates in the fence depends upon the number and size of the families which live in it. Each family has exclusive rights over at least one gate, and a large family with many cattle has more than one. The kraal, such as, from approximates to a village, for several families live in it, and the gate, *ikiboma*, has come to signify the family, the word being used with the article (*en-ikiboma*) as a synonym for *el-moran*, "the family." When a man sets up his home in a kraal, he puts his first wife in a hut on the right of his gate as one goes in, and the second wife on the left; the third, if he has one, goes on the right, and the fourth on the left, and so on, the hats being so arranged that each succeeding wife lives immediately to the right or left of her gate. The people on each side of the gate form two distinct groups, *in-kutoto*, the effect of which is felt most in matters of inheritance. (See below, p. 108.) The warriors' kraal or *e-manyata* is inhabited by all the members of one age-set in one district, who constitute a company, *ent*, and the huts are built in triangle positions. With the men live their mothers, and some young sisters who help their brothers, and if old enough become lovers of warriors. The mothers, but neither sons, and younger children share a hut, all sleeping on separate beds; when the mother wants to sleep with his lover he goes to another hut. The mother's husband may visit her at any time, and when he comes her hut must be given up to the pair. The inhabitants of a *manyata* vary considerably in number, ranging from 20 to several hundred.

Livestock

Cattle

Cattle, *in-kishu*, are the object on which the lives of the Masai are centred, and on which their whole existence depends. Their importance is both material and spiritual, and people who perform any kind of work other than tending cattle are despised by the Masai, whose attitude towards cattle is similar to that of the Nandi. The Masai believe that in the beginning God gave them all the cattle in the world, and therefore nobody else has a right to possess any. Cattle provide the Masai warrior with his food in the form of milk, blood, and meat, and they give him spiritual and mental satisfaction through their existence, though it would seem that there is less outward and ritual expression of the love of cattle than among some other East African tribes who combine pastoralism with agriculture. This, however, does not by any means indicate that the Masai are an agricultural people who have wholly given up agriculture and taken to pastoralism. Since the Masai, unlike the Nandi, kill large numbers of their cattle for eating, it was essential in the past for them to maintain the size of their herds by continual raiding, for the natural reproduction rate would not have been enough. On account of its high ritual value, milk may not be drunk on the same day that meat is eaten, nor may it be boiled, but it may be drunk mixed with blood. Cream also has a high ritual value, being the food of cattle, and is used as a sign of peace. In 1930 the average size of an elder's herd was officially estimated at about 75 head of cattle, 60 sheep and goats, and 10 donkeys; this was based on the estimate of 720,000 as the total number of cattle belonging to the Kenya Masai. In Tanganyika, it was found that the average number

In 1902 the Di'Dinka numbered about 2,000 (2,400 according to the census of 1905), and though they are of Bhari stock, being descended from a Bantian mother called Di'Dingin, they have adopted a variety of refugees including Dinkas, and become cattle people. According to one Bilkent they had originally two villages at the south end of Lake Bashagin, but two were destroyed on account of Bhari and Tuk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokwa Island in Lake Bashagin. They are expert swimmers and possess canoes, though one Bilkent saw none in 1907. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. They are crowded into two permanent villages known as "Nyangin Kokwa" and "Nyangin Nyagin" in the Tigelish valley a few miles south of Lake Bashagin; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Di'Dinka keep as close as they can to the dress and customs of the pastoral Bhari; they have circumcision and dances and other ceremonies, and practise the "tree-love" system of the pastoralists, though without the marriages. Today they have some 180,000 acres of pure land, about 6 cattle for cultivation, but they have acquired, since the establishment of British rule, some 15,000 or more head of cattle, and 20,000 goats and sheep, thus achieving in part the ambition of all Di'Dinka to become cattle people again. In the time of Thomson and Tuckey, however, Nyangin was an important station on the caravan route, and was Bilkent noted that they had a large acreage of cultivated land. This was divided into blocks (by ways of three to four miles square) which were interpersed by irrigation channels bringing water from dams across the river Tigelish. This system was still working in Dunbar's time, who says that the opening of the main ditch was performed with the "sacrifice of a sheep at the mouth of the ditch."[*] Besides agriculture, the Di'Dinka hoed and hunted, using the bow, and spears of fish and Tuliana type.

It is possible that the fishing group called Di'Bala who live on the east shore of Lake Bashagin is to be classed as Di'Dinka.[*] They subsist on a diet of fish alone which, when Tuckey and von Bilkent saw them in 1906, had produced no ill-effects, but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Culiche blood in them.

The Di'Anum round Shoom Mora are a large tribe of agricultural Bhari, originally of Bantu stock, but now occupied by the pastoral Bhari as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Nungayu in Southern Shamland are also to be classed as agricultural Bhari.[*]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Series Circumcision

Life Cycle

From birth to circumcision a male is a boy, *ol-ayiwi*. At circumcision[*] he enters an age-set and becomes a warrior, *ol-morani*, "one who is circumcised," and may associate with uncircumcised girls. At the *ol-gudar* ceremony he becomes an elder, *ol-moran*. Warriors may marry when they become senior warriors. After the *ol-gudar* the newly made elders attend to their family concerns, and get wives

chief, but in that year it was recognized that he was in fact an arch king, and the native administration was reconstructed with 10 Native Councils, one for each division (3 Fulbe, 3 Gbaya, etc.), to replace the original council of the chiefs. These Councils were composed of 3 appointed, elders, and senior members and the presidents of each formed a Central Main Council which met twice a year. Under the Councils were 40 headmen, some of them 3 appointed. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1949 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Kundi and Kulbele, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled chiefs) and sub-headmen.

In Tangambiha, the fulbe were at first supplied as the head of the Elendes but since his competition proved unsatisfactory to the people themselves, a Main Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of sub-areas and there are 31 representatives of each local council sit on the Main Council. There are 31 paid headmen.

The Mami hut, *mit-ati*, pl. *mit-atiti*, is a low structure with a flat or flatish roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or broadwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather tubes are laid on top to keep out the rain. Huts are not isolated, but are grouped together in hamlets. (See above, p. 497.) The beds of the agriculturist Di Gbaya have flattened ends of the normal East African pattern (p. 111). A temporary skin bar called *ai-gulter* is used for a temporary bed where pasture is poor.

Dress and Ornaments (Traditional)

7/9

Warriors wear a small cuff, or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. This battle-dress consists of a head-dress of varied feathers or of lion-skin, a cape of coloured feathers, a cap made of a goat's bladder, a cell-skin garment, leg-ornaments of monkey-skin, and a piece of goat-skin fastened to the belt. The distinctive warrior's ornament is the horn arm-clamp called *a-mai*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *ou-kuro* is worn by warriors on certain occasions. Bulfe men when going on a raid after sacrificing an *ol-amami* (*ol-ahoni*). Jaba, Tumbo ole Wiwi, when they go on a raid after making a vow to conquer or die. Elders wear skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys wear a sporrhide.

[10]
391
[356]
301

Married women wear a skin cape and a skin skirt held in place by a broad belt. They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and from knee to ankle. All married women wear flat discs of coiled iron wire, *i-ramdin*, hung by straps from the ear-lobes (like the Bondi men), and some wear wide cylinders of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

SHORTER NOTES

[S.6] The 'Il-Oiman' Ceremony of the Maasai. By Lol Chief Simeiko. With three text figures.

135 The cycle of ceremonies connected with the formal leaving of a Maasai age set starts with their leaving a ceremony, performed by the members of the age set immediately senior to the retiring warriors set. These members are destined to become the successors to retired boys of the youths who are about to complete the seven age set. The ceremony is followed by a dance which marks the end of the senior circumcisions. These two ceremonies are followed by a four-day dance of the initiates to the [illegible] ex-dance, and the circumcision of the new age set is carried out over the next three to four years, the youths being 14-15 years of age. Each generation is divided into Right-Hand and Left-Hand circumcisions, the latter begin their ceremony about six to seven years after the former, but both come to be [illegible] at the same time.

Seven years after the beginning of their circumcision, the members of the Right-Hand Circumcision become senior warriors through the e-mesi. This ceremony, which is part of the age set ceremonies, is held about every seven years, when an age set of junior moran (warriors) feels that it is sufficiently strong and mature to graduate into senior moran, and so 'grade' the senior warriors of the previous age set up into elder status. The word e-mesi is derived from the verb e-mes, to place upright or set up (i.e. a seven age set of senior warriors is 'set up'); and, as will be seen below, certain things are ceremonially 'set up' in the emesi (warriors' kraal) where the ceremony is held.

Tribal elders choose a site for the ceremony, and there the moran who are to take part, aided by their mothers and girl friends, build a new kraal. Each young man has his own hut, a long, low building of wattles, wood and cow dung. These are built in a circle, facing towards the night boundary and gathered near the gap between the huts to keep out wild beasts which might pass on the circle dropping in the area enclosed by the huts.

[S.63] [S.64]

Besides choosing the site, the elders also select six moran from those about to take part in the ceremony. These are 'poor moran' or they are called moran by young men of good character, not poor men, fatherless Maasai and without physical blemish. These leaders, the Ol-Chani, a chosen security and a war relic of the [illegible] until the ceremony is due to start. Every morning details being called upon to fill the positions for the Ol-Chani is regarded as a compliment for the residents of his kraal. They believe that if he dies young or a member for their area, they will live long and prosper.

[S.65]

After the relic huts have been built, the members of the 'poor moran' build the sacred hut called Ol-Ingoro. This is a round building, also made of branches, wood and cow dung, topped with a conical roof of the same materials, forward to have a hole of 'ledbeck' shells on which are left the horns and a strip of skin running down the face. Inside, in the centre of the Ol-Ingoro, the Ol-Chani 'sets up' a stick of the wild olive tree (Olea chrysophylla) and an enormous hot water which means 'He-who-is-in-up'. The doorway of the Ol-Ingoro faces that of the Ol-Chani's hut, over to which is that of his assistant known as 'The Cover-up of the Hide.'

[S.66]

[S.67]

The women of the Loita division of the Maasai was held on 20-23 June, 1959, at Emurakwen in southern Kenya. The youths taking part were of the right-hand circumcision, the members of which are known as Il-Emoyyani.

The ceremony lasts for four days, and the first of these is called 'The Day of the Red Dance.' As dawn breaks, all the people assemble outside their huts facing east. Four elders chant a prayer

[S.68]

[S.61] 135

/T1 cont./

(000) against the Ewoss. The El kasit recognized the chief (of ollonji)
(174) of the Masai as also their own and seem for a long time to have
(184) been on the best of terms with them. Then -- as the tradition
(610) tells -- a girl named Ninkinqi, from the family of the of ollonji
(245) Sinnik -- she is usually designated as his sister, more rarely as
(72) his aunt -- took a fancy to a member of a legation of El kasit
(231) warriors sent to Sinnik and went away with her lover. When the
(101) lover bitten a son, the El kasit proclaimed him their of ollonji and
at the same time refused to obey Sinnik. With this the war began
between Masai and El kasit. They lasted -- as it seems -- the
entire first half of the nineteenth century and occurred sporadically
even in the second half of it. One of the decisive battles was at
Kimuga, a six-hour march west of Ninsiong /Mt. Masai/, where
later on the chiefs of the Masai took up their permanent /?/ sub-
(964) denos. The same driven away went into the rugged forests of
Ninsiong, where they lived for a long time in constant strife with
the Masai, until the chief Mbaryan completely subjugated them
and forced them into compulsory service. Other battles took place
near Ngorongoro, north of Lake Natron; the rest of those conquered
(941) still live there, mixed with Wangonjis from nearby kraals. The
remnants of the same defeated in the Serengeti steppe are still to
be found in Tawera, Kalu, Ammbu-rukini. The first battles
between Masai and El kasit probably took place in the vicinity
of Kasis /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe over Segemit
the same conquered fled to Ngojiko and then further to Uasgiko
and Ukiga, where they founded a settlement under the chief
Lemi.

The Masai took a few individuals from among the defeated
into their community. The rest split up. One -- larger -- part
became sedentary and formed some colonies in the vicinity of
foreign tribes or merged with other tribes. Another -- smaller --
part at first made a living for a time from hunting, until it
succeeded, by means of raids against sedentary peoples, in coming
into the possession of livestock again. Today they again live
wholly as before and are distinguished from the Masai only by

/1 cont./
the name El mali. Those who become military, however, are designated by the blood as El lambu and also as El kafi -- probably because they constitute the main part of the old El kafi. The camera people, accordingly, call them Wokaafi, while they make no distinction between El mali and blood and even impose on the former the name of the latter.

In contrast to the El mali, who have remained pure, the El lambu of all the settlements are more or less strongly mixed. In places the degree of mixture is so great that at first glance one scarcely recognizes the semetic features characteristic of the blood people; in places, however, it is also still so slight that any mixture at all can only be determined by thorough investigation.

A few groups finally, because known, the El ndzi. This is the second branch of the Wandzilla; the third and most recent, the El gaaraki, arose from the blood themselves, in that those impoverished by livestock epidemics were forced to a new means of subsistence.

Even up to 17 years ago the blood were the lords of the vast steppes in German and British East Africa, when the European occupation brought about a change. The entire land inhabited by them is divided into three provinces. The Kiedzge Province embraces those steppe regions that lie south of the line, extending east-west, connecting the peaks of Kilimandzharo and Meru. North of this line the province of Lotia, and still farther north, embracing the region of Lake Rudolf, the province of El Dongo. In earlier times a part of Lotia called El mondgai seems /1/ to have temporarily formed a province by itself. Each province (ul mulu ?ne : a province) is divided into districts (ul gol : the lands and these again into areas. Most of their names are proper names that can not be translated; others are chosen from local peculiarities, for example, springs, bends, hills, mountains, trees, etc. The inhabitants often name themselves after the individual provinces or districts and then speak of Kiedzge-blood, Lotia-blood, Ewafgai- or even Kiedz-, Mulu-, Ilgonai-blood, etc. Earlier travelers often mistakenly took this designation for tribal names. Similarly, the word el ulaab has been misinterpreted.

1. [The reference is to the last group of the original Ewafi--Analyst]

/(2 cont)/

In connection with the somatic view of the three Masai branches, the following is to be considered. The land that immigrated into the true Masai, have kept themselves quite pure as a race. They practically never submitted to the kidnapping of women and children to war, otherwise customary everywhere in Africa, they did not marry Bagesse and did not take Bagesse into their community.

Photo 2 [illegible] photo.

Ill. 1. Three Masai women.

Therefore they most closely show the racial characteristics peculiar to the Masai people. The same was true of the Wakuafi until the time when they became sedentary. Then, however, they needed not only replacements for their lost cattle, but also many hands trained in the cultivation of the soil. For this reason on war expeditions they dragged off, not only the livestock of the enemy, as before, but also the women and children. The degree of mixture between Wakuafi and Bagesse is very different in the individual [illegible]. [i.e., the Masai, Wakuafi and the Wandorobo --Analyst]

/12 cont./
Wakashi settlements. In general, naturally, the mixture is greater where the Wakashi have already been sedentary longer, least and often scarcely /13/ noticeable or even not at all where they did not become sedentary until the last half of the nineteenth century. The cattle epidemics, which constantly brought new blood elements to the Wakashi, had a convulsive effect on the mixture. In many cases one can quite accurately determine whether and when blood of foreign blood a single individual has by careful questioning about the family tree. Among the Wakashiles who live far from the Haganas, in the midst of the most inhospitable bank of the steppes, for the most part probably no mixture with Haganas blood has taken place, at all, against which, to be sure, each with the family belonging to the tribally related Tlingas, must be assessed with certainty on grounds of a linguistic nature, as well as according to the tradition. Degeneration through intermarrying also seems excluded from the outset, for they constantly had an influx of blood women and children, whose bodiesh and failure had perished in the factor following a cattle epidemic.

If one examines the somatic characteristics of the three blood branches from these points of view and with the elimination of all cases in which a mixture has been proved or is not excluded, one comes to the conclusion that one has before one a homogeneous race. Their characteristic traits are the following: the bodies are tall and slender. They do not, however, appear masculinely thin, but rather give the impression of elegant, flexible mobility. The thin, fine bones are surrounded by well-developed muscles, which, to be sure, stand out clearly, but, in conformity with the slenderness, not obtrusively. One sees especially beautiful forms among young girls. They are gracile, slender figures whose limbs show only just enough roundness in order to make them appear comely. Sluggish, unlovely amplitudes are really find only among older women. The skin color varies between deep dark-brown and light chocolate-brown. The heads are high and narrow, the oval face often has finely chiseled, attractive features and is less prognathous than among Haganas, not infrequently even orthognathous. The high, narrow forehead is well arched, the

PL1 cont./

recovery from this pox. Mbatyan caused outstanding work through the discovery of a protective vaccination against lung disease of cattle. According to the corresponding accounts of Zandes and few old Maci, Mbatyan, several years before his death, had already predicted the appearance of clubpox that did not take place until after it and the subsequent subduing of the Maci by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the latter should destroy in childhood one eye of the outlaw following him. The face was even more repulsive because of a scanty, slightly gray full beard. That is, in contrast to his other men, neither the *ol ximbi* nor the *ol gatanak* and *ol lkaabi* mentioned further below ever pluck out their beards, because they would lose their supernatural power through the removal of his beard hair.

The chief's village consists of a large number of kraals lying close together, several of which serve as the dwelling of the *ol ximbi* with his numerous wives. Mbatyan had about 100 wives; the still young leader has only 30 of them. No stranger may enter these dwelling kraals of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (*ol lolgarak* *ainoff* *ol ximbi*) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the months of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men wandering about idly in the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

[illegible] [illegible] use of material available everywhere. Like every task in the kraal, hut construction is the duty of the women. After the site for the individual hut (Fig. 8) is cleared of grass and brush and then levelled, the oval-oval ground plan is undertaken in that the women scratch it on the ground with her foot. They do not use any auxiliary means for measuring it; measuring by eye is sufficient for the women who, even as a child, helped her mother with this work. Into the ground plan, at four-long intervals, poles (si fimi, si fimi) about 1 1/2 meters long are stuck in the ground and joined lattice-like with thumb-thick cross-switches (si gwesi, si gwesi). Then in the longitudinal diagonal seven to eight supports (nyo lugwiki) are dug in, over which a longitudinal bar (si nyamkwa, si nyamkwa) is put from one end of the hut to the other. Over this the poles are arched and the opposite ends lashed together with papyrus grass (ng mijo). By interplaiting finger-thick switches (ng lawiki, n lawiki) while /ng/ and /n/ are made tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters high, 4 to 5 meters long and 3 meters wide. Heavy skins served principally for roofing before the rinderpest raged among the livestock around the year 1890. Now, /Figs. 2 and 3 appear here/ when the bleat herds have become vanishing small in contrast to former times, the switch framework is first packed with a layer of dry, long-bladed grass (si gudinda or si gudinda) 15 to

/[illegible] 30 centimeters thick, and this is then smeared an inch thick with fresh cattle dung (a [illegible]). For protection against heavy /[illegible]/ rain, one at times also puts dried and debaired sheepskins on that. Toward anyone entering through the door opening (at [illegible] a the mouth of the hut) thick smoke pours from

/[illegible]/

[illegible] small pole built beside or on the hut. The door opening of the hut is closed off at night by means of a mat's skin hung over it or a heavy branch dragged in halfway.

• [illegible] /[illegible]/ The individual huts are very close to one another. The space between two of them amounts to scarcely half a meter, so that in the evening the entire ring of huts seems closed except for the entrances. For protection against wild animals and monsters, the kraal is surrounded by a most barricade of heavy acacia branches, with which the entrances are also obstructed after the livestock has returned from pasture. In the place enclosed by the huts one finds a ring-shaped thorn barricade to which the livestock stays during the night: large livestock, calves, and small livestock

Fig. 7. Maasai hut. Plastered with cattle dung.

[illegible]

are separated from one another by them barbicules, and the hair are often protected from damage by the cuticle by means of fleecy branches placed around them.

One distinguishes between beards for the married [illegible] of [illegible] and such for the married [illegible]. In the former live the married men [illegible] of [illegible] with their families, in the latter the married [illegible] of [illegible] with their mothers and the half-grown, unmarried girls [illegible] [illegible] [illegible]. One nevertheless also finds several beards both together into one. The author found a village that consisted of five beards built next to one another, three of which were 30 stories beards. A dense fence-barricade surrounded around the entire beard complex.

The married men on the average live in six wives, wealthy men have in addition also a few secondary wives to whom they are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

000 Warrior kraal. — Its inhabitants. — Work. — Duels of the warriors. — Feast meats. — Ceremonies: the spears, his badge and toilet leaders: bowlerman. — Dancing. — Daily life. — Inhabitants. — Dance and song. — War: permission for it, preparation, farewell, marching off, march, camp, surgeon, spies. — Formation of the war march for the attack. — Battle. — Booty. — Captives. — Distribution of the booty. — Return of the warriors. — Defense procedure. — Attack on cattle. — Concluding peace. — Match performance. — Retirement from the warrior kraaling.

{69} {70} {[illegible]} {[illegible]} In each district one usually finds only one warrior kraal, which contains all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ul umdabu or umgidi) is not outwardly differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /[illegible]/ of the warriors. In every hut there is a large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are staying absent for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward outdoors. The others then often sleep three or four in a hut, as do the mothers.

{69} {70} {[illegible]} {[illegible]} {[illegible]} The kraal is laid out by the old women, they build and maintain huts and then leave. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
[343] dividual ones. Thus everyone remains responsible for the barricading
[672] of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on ac-
701 count of the lack of milk. Milk is the only food that the Ol morani
262 takes in the kraal, and the lack of it is therefore especially grievous.
264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e buli) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

[Warrior Kraal]

701 /85 cont./ Under a shade tree with thick
• 361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three
701 meters. On the side opposite the
342 entrance opening is the common
35 sleeping place of the ol gibet companions; between this and the door, the hearth; beside the door the space for firewood.
[415] Close beside the sleeping
[237] place hangs the stomach or
[276] bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol ōōni).

/111 cont./

192 When one so often sees how the warriors flirt with the girls and
832 how the latter act lovingly with the former, one would expect an abundance of expressions of tenderness. But here, too, this does not turn out to be true. The only pet name that the warrior gives the girl is joruert' ai = my darling, while the girl calls him ol djore lai = my friend, or also says injór naleñ = I love you very much, to which the warrior replies: ídol íde eń gawariẽ = we shall see (literally videbo noctu /I shall see at night/).

XIII.

000 The blacksmiths. -- Their own kraals. -- Their social position. -- Attitude toward the blacksmiths. -- Workshop. -- Tools. -- Iron extraction. -- Technique. -- Blacksmiths' products; their prices. -- Wire drawing.

564 The kraals of the blacksmiths lie isolated, apart from the true
326 Masai kraals. It is not correct to designate these as a blacksmith
[361] tribe, since there are blacksmiths (ol kononi, el konono) in all three
[614] tribes and also in all lineages, except the El kiboron, and neither a
[613] single tribe nor a single lineage consists exclusively of blacksmiths. They form a caste of their own and are the pariahs of the Masai, the despised and detested, the unclean, whom one would prefer not to tolerate if one did not need them so urgently. From ancient times the trade has been handed down from father to son, who only practices the calling after his marriage, therefore as ol móruo. One cannot detach oneself from the caste by not practicing the trade; rather, one who comes from a blacksmith family always remains ol kononi, no matter whether he works as a blacksmith or not. If, on the other hand -- which happens only very exceptionally -- a Masai who does not belong to the blacksmith caste permanently or temporarily practices the blacksmith's trade, he will, to be sure, also be regarded with scorn, but neither he himself nor his descendants will be despised as blacksmiths or counted in the blacksmith caste. A blacksmith kraal
[777] (eńg an el konono) in the vicinity of other kraals brings the latter bad

/112 cont./

564
326
[197]
[198]
[114]
[563]

/footnote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564
326
461
[114]

The opinion of many a European, that the /113/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El konono who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564
326
783

Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564
326

Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Engussa from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugge people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

314

While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (ol guguet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (en edoñschore). The smith makes his tools as well as his

233 The far greater part of the steppes offers excellent pasture; only
311 smaller or larger isolated stretches are quite unsuitable for this. The
[823] Masai know these precisely and scrupulously avoid them. What makes
them unusable is first of all the occurrence of grasses that bring about
digestive disorders and the lack of salt in sufficient quantities, through
which a similar effect is brought about. In good pasturing places one
[135] always finds salt licks. The rain water standing in a depression in the
ground has leached out the very saliferous earth and, after evaporation,
[825] has left behind a more or less strong, gray crust of salt. It is self-
evident that one avoids those places about which the presence of the
above-mentioned harmful insects is known. It is striking, however,
that ticks are not feared at all.

• 361 When the pasture around the kraal has been grazed off, a change
233 of dwelling is decided upon, which takes place as soon as a new
pasture ground has been found by a few people sent out. Then there
is activity in the kraal long before daybreak. After the cows have
been milked, the cattle moves off as the first party. Then the herds
of goats and sheep follows, and after these /177/ the calves. Young

• 361 /177 cont./
233 animals that go forward only with difficulty are carried in the arms.
[561] Boys take care of the livestock driving, under the supervision of
[701] married men. With each party is found a stronger guard of warriors.
[492] Meanwhile the women are still busy with the loading of the donkeys, on which all the household equipment is packed. More rarely a few oxen or cows must help out. After this work is finished, the herd of donkeys follows the tracks of the livestock. Behind them come the women, girls, and children; almost every one of them also drags along some household object or at least a small-livestock or neat
[701] skin. Oddly enough, a guard of warriors is not found with this party, as there was with all the preceding ones, but rather at most a few old men armed with spears or bows and arrows. Usually the destination is reached on the same day. If this is not the case, however, camp is pitched during the night within a hastily constructed barricade of thorny branches. The next morning the march then continues
361 before daybreak. After arrival at the new site the women immedi-
462 ately start laying out the kraal. First the thorn barricade is laid out, and in the following days the huts are built. Erecting the kraal proceeds very rapidly; as a rule it is finished in a week at the latest. The old kraal was not destroyed upon being vacated. It is left standing and reoccupied later, after the pasture has recovered. Meanwhile, of course, much has deteriorated, so that the work of reconstruction almost equals that of a new installation. In the last
[136] few years, since the sand flea (Pulex penetrans) has become a pest in East Africa, the reoccupation of old kraals is declining more and more. In order to destroy the noxious insects inhabiting them, they are burned when vacated.

000 It is obvious that the European who wants to engage in stock-breeding here cannot move about with his herd in the manner of the Masai. Moreover, a division of the herd in such a way that sufficient grass is present throughout the year within range of the kraal for the individual parts does not seem feasible, and, to be sure, especially because of the difficulty of personal supervision and observation of the sicknesses arising, as well as of isolation in case of an epidemic. An improvement of the pasture by means of

/179 cont./

Infectious Diseases

757 164 For dysentery (eňg ęa en gohŏge os sarge) the sick one is given much liquid sheep-fat or melted butter to drink.

Malaria (eňg odjoňgăni). At the start of the chill, the patient is given an emetic, for example, a cold, strong extract of the bark of ol mokotan (Albizzia anthelmintica). Even before the fever breaks out, a decoction of os sogonoi bark is administered, through which, in many cases, the outbreak of the fever is supposed to be prevented or alleviated.

753 825 It is interesting that the Masai -- so they say -- have always regarded the bite of the mosquito as a prerequisite for an attack of malaria. They say that the latter, with its bite, inoculates the person with a poison that causes malaria. For this reason they never [361] lay out their kraals in the vicinity of a swamp or other standing water, and also avoid those places in whose surroundings during the rainy season longer standing puddles form. /180/ In order to drive away the mosquitoes they burn (in the camp or in the hut) the peppermint-scented ol eňoroň (Plectranthus Merkeri, Gürke). If a kraal is badly afflicted with mosquitoes, its inhabitants leave it immediately out of fear of fever (1).

1. So they told me as early as 1895. When, at the beginning of 1896, Zendeo with a number of his people came to Moschi, I received in reply to my question as to whether they had to suffer much with fever the answer: "No, there are no mosquitoes near our kraals."

757 Other emetics are: root powder of ol aisai (Cyathula Lindowina Vlks.), which is taken stirred in water; a decoction of roots and stalks of ol gurschaschi (Barleria mucronata Lindau); a root decoction of ol moran (Solanum nigrum); the boiling down of a handful of bark or root of ol duňgui (Harrisonia abyssinica Oliv.); a cold extract of five finger-size pieces of the bark of olti (Acacia mellifera Bth.)

XXII.

000 Law. -- Concerning family and personal rights, cf. 2nd Part, II, IV, and XX. -- Property rights. -- Things found. -- Barter or purchase. -- Liability of the relatives for debts, gift. -- Penal law. -- Murder and manslaughter. -- Revenge. -- Composition. -- Negligent homicide. -- Bodily injury of various degrees. -- Accomplices. -- Immoral offenses. -- Suicide. -- Kidnapping. -- Theft. -- Treason. -- Arson. -- Cowardice in war. -- Death penalty. -- Fines. -- Degrading punishment of warriors. -- Compensation for innocent accused persons. -- The mentally ill. -- Warning. -- Legal proceedings. -- Courts. -- Example of a /212/ criminal case. -- Inquiry about an unknown culprit; -- Pleading. -- Swearing to the truth. -- Torture for exacting the truth. -- Ordeals in the search for truth. -- Sorcery procedures. -- No international prosecution of criminal deeds.

671 An awareness and understanding of justice are very little developed among the Masai. Therefore only a small number of customary [184] legal provisions exist, which are by no means uniform for all Masai, but rather often enough vary in the different districts. As nomads, [361] among whom individual families frequently live alone or with their closest relatives in a kraal, by themselves, without having neighbors in the larger vicinity, they make do with fewer laws than another tribe whose numerous members are supposed to live within definite fixed limits in permanent order and peace. Furthermore, the nomadic life in and of itself leads to a freer conception of life, which opposes tutelage through laws and often prefers to let might [593] come before right. But in order to understand the great inconsist- [619] ency in individual legal decisions, one must above all take into [186] consideration the feeling of solidarity, which is strongest in the family and always still strong enough in the tribe to arouse from the first great prejudice against anyone who does not belong to the 593 tribe. The questions concerning family and personal rights have

/348 cont./

121 illegal and immoral, because they run contrary to our consciousness
177 of justice and our Christian morality, and which cause to arise in the economic field exploitation in the crassest sense of the word. Now while every state that occupies a savage country has the duty to appear as promoter and guardian of justice and morality and at the same time to promote economic development by guiding production along the paths of our modern principles, along with that it only too often overturns the foundation pillars on which the existence of a primitive people rests.

182 Thus in plague-ridden Africa the Masai largely owe their existence
721 as a nomadic people, whose only resource lies in its livestock holdings,
178 to the fact that they can always replace their losses by expeditions of war and plunder. As soon as the possibility of such expeditions is taken away from them, or at least very much reduced, through the erection
[648] of military stations that grant protection to the victims of the Masai, there must naturally arise a situation in which a gradually increasing weakening of the vitality of a people takes place. What was formerly to their advantage, their war lust and the cowardice of the Negroes, now becomes fatal for them. Both entice them to raiding expeditions again and again. In order to avoid the punishment deserved for that,
[361] they retreat into regions that they formerly avoided as harmful to the health for human beings and livestock, or on account of inferior
177 pastures. If the Masai, when they came under the influence of the
182 European occupation, had still been the strong people of Mbatyan of 30 years ago, they might perhaps, after the example of other primitive peoples, have carried from it even though a marked, nevertheless only a temporary weakening in the meeting with the higher culture, and then gradually recovered again when they had become ready for
182 its advantages. But we found the Masai already in a condition that
731 looked very much like ruin. The livestock epidemics around the year 1890, which, not locally restricted, had afflicted the herds of all the Masai to such an extent that actually only miserable remnants were left, had produced a general and extraordinarily sever famine. Hundreds of thousands of Masai, especially men and boys, fell victim to it, and in the year 1895 the author still found the steppes around Kilimandscharo appearing in places as though they

/348 cont./

182 731 had been sown with the bleaching skulls of those who had starved and out of the stricken animals. Any of the women and girls who had not died of hunger sought and found refuge among Negroes practicing [648] agriculture, who always like to buy or kidnap female individuals. A mother would sell her child for a handful of maize and would sell herself a day later for a similar price, in order to avoid starvation. Negroes and caravans /349/ took possession of the will-less ones, in order to resell them as slaves. Many have since come back, in part through flight, in part through redemption by their relatives, but more are still found in strange hands. The latter, even though their blood lives on beneficially in the new mixture with Negroes, are permanently lost to the Masai people. So greatly has the misfortune, 182 731 to which an opposite effect is so often attributed, broken up the 669 former organization, the firm unity, that, soon after the end of the epidemics, the unhappy quarrel between the brothers Lenana-Zendeo about the undivided rule over the Masai could begin. With its continuing civil wars it acts powerfully toward the completion of the destructive work of the epidemics. The Negroes, with whom alone [726] the Masai formerly waged war, except for smaller undertakings [186] among themselves, which bore more the character of provocations than of serious battles, were opponents inferior to them. Now equal parties stand opposite each other, which makes the wars bloodier, more destructive.

178 241 Through increasing impoverishment as a result of these epidemics and civil wars, there is now going on among the Masai -- as formerly [433] among the Wakuafi -- a change from nomadism to sedentation, agriculture is taking the place of animal husbandry. The ones [361] deserting the "people" in this manner are founding settlements, in part self-sufficient, in part supported by Negro tribes, somewhat removed from the dry steppes, there where the watering is adequate for the laying out of plantings. No one expects them to prove to be particularly skillful at this; but Nature, which goes so far to meet her children in the tropics, helps here too. A moderate watering suffices to make the batata shoot stuck in the virgin soil grow and produce tubers. Maize for the most part appears just as easily satisfied as advantageous. These then are the principal useful plants

/350 cont./

178 its effect. Hated as faithless and despised as agriculturalists, the
619 sedentary ones are constantly plagued by raids that not only cause
721 them great loss in human lives, but also take away any possibility
[829] for them to arrive at any improvement in their way of life by keeping
livestock for the attainment of the meat and milk diet so necessary
[177] for them. Moreover, the frequent intercourse with sedentary Negroes
[164] and caravan people leads to an increase in the cases of venereal
diseases. Premature marriages of girls, which can not happen among
582 the Masai still living as nomads, is not rare among the sedentary
178 ones and often enough leads to the death of the young woman who
184 is scarcely more than a child and whose bony structure, despite her
165 attained capability to conceive, is not yet developed. Finally, it
178 must still be mentioned that no doubt the longing for the formerly
182 free life in the broad steppes and the feeling of humiliation over
having become a so deeply despised cultivator of the soil oneself
are factors that have a wasting effect. The latter circumstance also
[186] brings with it a decrease of national pride. The barrier that kept
[177] Negroes out of the community of the Masai has fallen. A disadvan-
[144] tageous race mixture hurting the people is slowly taking place.
Among the Wakuafi this process was more rapid in their period. At
[648] that time no European administration prevented their raiding exped-
[721] itions in Negro regions, from which they brought home livestock
and women experienced in agriculture.

177 In frequent -- almost daily -- intercourse that soon springs up
178 and then continues to exist between the Masai who have become
sedentary and the settled Negroes, the Masai naturally also share
in the disadvantages that /351/ come to the Negroes through the
encounter of their lower culture with our higher one.

178 We have seen how many difficulties sedentation brings to the
177 Masai, and it is therefore not surprising that a part of those who
• 361 have already become sedentary give up their fixed residences again
after repeated failures. These then often join the Wandorobo, to
live by hunting, and call themselves this.

561 He may marry when he is a senior warrior. When he becomes
593 an elder he may take his mother (if he wants) and her
591
[582] share of the family cattle (for each wife has a given
[422] share of cattle) and move off to join others in a village
[562] (Fosbrooke, 1948).

561 The unmarried girls of the tribe live in the
836 warrior's manyattas and normally each moran has one
[583] favorite girl who becomes his concubine. They told us
that usually that girl became the warrior's first wife.

621 (c) Villages: Villages consist of a group
of families, often about five but sometimes more or
less. The villages are commonly called bomas or
361 (improperly) manyattas. Each boma consists of an outer
233 circular thorn fence with a series of gates, one for
[417] each Masai elder. Within the gates there are a series of
huts. Often around the huts are small thorn fences
in which young livestock are kept. The cattle of the
village are normally herded into the space in the center
of the boma each night for protection from two and
four legged predators, and in the morning they are taken
back out to graze.

595 When a Masai marries, his first wife builds
on the right of his gate, his second on the left,

13*
* 361
[342]

Building a large boma entails cutting a large number of trees. (Fig. 22) Where trees are thick in Western Masailand there are tsetse flies (Fig. 23). Consequently the bomas are constructed away from them in more open country, in open grassland near to hills or watercourses or in open parkland. Under such conditions a large boma can result in the clearance of larger woody growth -- for initial construction, subsequent repair, and for fires -- from an area ranging from about several dozen acres to a square mile.

361
*233
221

Fosbrooke (1948), Grant (1957), and Page-Jones (1948) have noted that the Masai normally placed their dry season bomas within about five miles of permanent water. One day they graze the animals to and from water, letting them drink. The second day they graze the opposite direction, and on the third day they return to water. Thus a rough circle with diameter of ten miles is grazed around each boma. In the wet season the Masai leave the boma, either setting up a new one in an area of good [887] grazing, or making temporary camps (Ibid.). Occasionally old people with a few milk cows are left behind in the main dry season boma. Under the present conditions in Western Masailand we saw very few large bomas that were 342 not located at permanent water. It may be that increases 343 in stock, or decreases in available water, or some other *233

Figure 22.

Abandoned boma site in Acacia woodland north of the Serengeti Plain. This was a small boma, abandoned for two years. The remains of the boma are behind the Land-Rover. Note the numerous stumps of Acacias cut for construction of the boma and for firewood; the sprouting from the stump in the foreground; and the ground cover of weeds and coarse grass. The palatable bunch grasses were killed out by overgrazing before the Masai left.

342 factor has changed the Masai pattern of boma construction.
343 *233 The present bomas, for the most part, are semi-permanent and during the rainy season the herds are sent out to graze in the care of a few youths supervised by one or more elders. They construct temporary brush bomas, just large enough in diameter to contain the stock in their care. Usually no plastered hut is constructed. Instead a small, often open-roofed brush enclosure is made in one corner. Where a temporary boma is to be occupied for several weeks a somewhat larger boma is made and the hut may be plastered. Building these temporary bomas results in some brush clearance, but rarely in any tree damage.

362 • [361] Large bomas appeared to be relatively permanent. When a large boma was abandoned another was usually built nearby, often only a few yards away. Individual bomas appeared to be occupied normally for about five to eight years, although some doubtless last longer. One cause for moving is the accumulation *[233] of dung. In the center of large bomas where the livestock are driven during the night the dung accumulates into a gentle hill sometimes several feet high at the center. [364] This creates sanitary problems in the rainy periods since the huts are at the foot of this hill and the doors usually face inward. When it is dry if a fire gets

/345 cont./

182 Harmful to the child's health, on the other hand, are the poor huts,
165 which are always /346/ filled with dense smoke, and furthermore
854 the lack of cleanliness and the faulty diet. The belief, widespread
• [362] among all African primitive peoples, that fat gives strength and
[853] health leads to the stuffing of the baby, despite all its struggles and
[146] screams, with unbelievable quantities of butter. Soor, as well as
[856] stomach and intestinal affections, and ailments of the respiratory
[164] organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in inspecting the Masai kraals, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, unconsciously aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age
182 at which the men enter their first marriage is unfavorable for popu-
582 lation increase. Until about the 28th or 30th year of life the Masai
836 belongs to the warrior standing, and he may marry only after leaving
839 it. This circumstance in turn makes free love, such as exists in the warrior kraals, an understandable social institution. One must judge this arrangement on the soil in which it grows, in order to remain objective. From the same standpoint we shall have to judge more leniently the free love existing among the married, which, despite numerous restrictions, appears to us like a continuous prostitution
[548] of the woman. One can do this all the more since through that professional prostitution is excluded here, and consequently the possibility of infection is greatly reduced; this last circumstance is undoubtedly to be regarded as people-preserving. Actually the Masai
[164] maintain that in former times (before the great livestock epidemics) venereal diseases only very rarely occurred. Immorality is rightly
182 regarded as a people-destroying factor, and history teaches us by
831 many examples how licentious and refined sensuality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

342 factor has changed the Masai pattern of boma construction.
343 The present bomas, for the most part, are semi-permanent
*233 and during the rainy season the herds are sent out to graze in the care of a few youths supervised by one or more elders. They construct temporary brush bomas, just large enough in diameter to contain the stock in their care. Usually no plastered hut is constructed. Instead a small, often open-roofed brush enclosure is made in one corner. Where a temporary boma is to be occupied for several weeks a somewhat larger boma is made and the hut may be plastered. Building these temporary bomas results in some brush clearance, but rarely in any tree damage.

* 362 Large bomas appeared to be relatively
[361] permanent. When a large boma was abandoned another was usually built nearby, often only a few yards away. Individual bomas appeared to be occupied normally for about five to eight years, although some doubtless last longer. One cause for moving is the accumulation
*[233] of dung. In the center of large bomas where the livestock are driven during the night the dung accumulates into a gentle hill sometimes several feet high at the center.
[364] This creates sanitary problems in the rainy periods since the huts are at the foot of this hill and the doors usually face inward. When it is dry if a fire gets

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75 People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up [177] inside a hyaena. The administration frowns on this [178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' homes that we saw looked to have been occupied nights as well as days.

262 <u>Food:</u> Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho (maize meal), milk, meat, and occasionally blood. 234 462 The cows and sometimes goats are milked by the women and little 234 415 girls. The milk is collected in large calabashes. These [531] calabashes, ochre colored and sometimes ornately [384] decorated with beads, are almost as much a symbol of the [291] Masai as the ochre blankets or cloaks, moran spears and hair styles.

6:Thomson K-3 (1883-1884)1887

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 175 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the bough. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 844 [352] 844 342 [237] [361] [364] 844 [351]

342 factor has changed the Masai pattern of boma construction.

where the land had been subjected to many years of close grazing by Masai cattle. Nevertheless, he recommended the legalization of this trade as being preferable to the system of smuggling then obtaining and proposed that this should be effected by gazetting ports through which livestock could be taken from and into the reserve. Weikei, Ngong, Kiserian and Saukutiek were suggested as suitable places for the establishment of trading centres.

The question of the advisability of opening up the Masai Reserve for trading purposes was referred by Government to the various Farmers' Associations in June, 1914, but, owing no doubt to the dislocation of business caused by the war, no replies were received.

Establishment of trading centres, July, 1914.

648*
439
366

In July, 1914, Mr. Hemsted reported that he was obtaining the signatures of the Masai representatives to the 1911 Treaty to the agreements which were a necessary prelude to the opening of trading centres in the reserve. He found the Masai generally to be quite willing to set apart the requisite land for the purpose and proposed that each trading centre should embrace 100 acres of two-acre plots, with the stipulation that the Masai were not to be deprived of any grazing ground except such as was included in the actual plots. The Masai had not asked for any compensation in respect of the land to be granted for these trading centres, but Mr. Hemsted suggested that it would be equitable to apply the rent charged for the leasing of the plot for the benefit of the Masai themselves. He proposed a rental of twelve rupees a month per plot which would, he thought, be sufficiently high to discourage the petty indigent Swahili without deterring the better class trader. He proposed to restrict trade to the resident store-keepers, thus giving owners of plots the monopoly, and to forbid itinerant trading: and, in view of the recommendations of the Chief Veterinary Officer, he suggested the erection of dips at those trading centres which were to be the main points of exit from the reserve in order that all animals intended for removal therefrom might undergo a course of dipping. The requirements of the Kikuyu and Lumbwa peoples could be met by the establishment of markets at various points outside the Reserve, which would be preferable to allowing the continuance of the system of itinerant trading by these natives.

In a supplementary letter, Mr. Hemsted named twenty-one localities at which he suggested the establishment of trading centres. These were:—Narok, Ngong, Mara River (Engirende), L'sitokitok, Kanamu (near Kiu), Kedong, Ndulele (on the Narok-Kijabe cart road), Uaso Nyiro (near Aggett's store), Narosura River (near Van de Weyer's store), Endasegera (in the Loita Hills), Sianna, Ol Alunga (fifteen miles above Aggett's), Lemek, Mara Bridge, Ol Joro lo Ngatuny (in Ol-Orokuti country), Gelegele (on the Kisii road), Bardamat (twenty miles south-east of Engirende), Mau (near Likia on the Nakuru track), Kandis (on the Mbagathi River), Weikei River (on the Narok-Kijabe road), Saukutiek River on the Mau (on the Naivasha track). The exits from the reserve would be at Ngong, Kandis, Weikei and Saukutiek and the erection of dips was recommended at these four exits. Later in the year he suggested the addition to this list of Ol Joroibor and Metigunju trading centres, for which the exits would be Kandis, Ngong or Tsavo.

Cost of erection of dips.

The Chief Veterinary Officer had suggested that the Masai might be asked to defray the cost of erection of these dips, but the Officer-in-Charge gave his opinion that, as the dips were to be constructed primarily in the interests of veterinary requirements outside the reserve in order to prevent the spread of disease, it would be inequitable to request the Masai to pay for their erection even though the natives might make use of them.

Mr. Hemsted's proposals approved.

The Governor remarked that the selected sites and exits appeared to be well chosen and in September, 1914, agreed to all Mr. Hemsted's proposals, including his recommendations about the cost of the dips.

Military requirements.

At the commencement of the war, the Intelligence Department expressed the desire that all Indian, Somali, and native traders be removed from the reserve, but it was subsequently arranged that they should be allowed to carry on their business at the trade centres and as it became necessary to exploit the Masai

*648
439
366

Reserve to ensure supplies of beef and mutton for the troops, arrangements were made in September, 1914, for trustworthy Somalis to exchange, on permit, cows and heifers for sheep and bullocks in the reserve, subject to restrictions limiting the number of cows imported to thirty-five head per journey and regulations necessitating the sale to Government of the stock so obtained at Ngong station. The price for sale to the Military Authorities was fixed at Rs. 4–5 per sheep and Rs. 30–50 per bullock for a beast of about 350 lbs. killing weight.

The Closing of the Masai Reserve to trade.

In August, 1915, instructions emanated from the Secretariat prohibiting until further orders the issue of permits to enter the Masai Reserve, while all Somalis then in the reserve were to be removed before the end of September. Such a step was necessitated by the military situation and the food requirements of the troops were met by authority to commandeer stock from the Masai for cash.

In October, 1915, it became necessary for the General Staff to order the closing down of all trading centres situated within twenty miles of the Anglo-German border, while at the same time all traders were prohibited from entering that area. In January, 1916, further restrictions were enforced and traders were excluded from the district east of the Mara River which had not previously been closed. This order was subsequently modified to permit trading in established centres north of the Kijabe-Mara cart road, but with a total prohibition on itinerant trading.

Military restrictions removed.

The trading centres which were thus closed to Indians, Somalis and Swahilis comprised Mara Bridge, Sianna, Narosura, Endasegera, Gelegele, Mogor, Bardamat and Ol-Orokuti, all of which were within forty miles of the boundary, but in response to Mr. Hemsted's representations, the Military Authorities permitted the opening of these stations in July, 1916, on the understanding that no undesirable person should obtain a plot and that the prohibition on itinerant trading should remain in force.

"Gazette" notice re trading centres in the Masai Reserve.

On the 8th of December, 1915, a schedule of trading centres was published in the "Official Gazette." The Notice read as follows:—

"The Government of the East Africa Protectorate with the consent of Segi, Engaroya, Saburi, Marmori, Langiri, Agali, Ole Yeli, Ole Naigina, Ole Gusheyan, Ole Matipe, Ole Nakola, Ole Kotikosh, Ole Batiet, Ole Tunere, Ole Masikondi, Ole Gelishu, Ole Malit, Ole Tanyai, on behalf of the Paramount Chief and the representatives of the Masai tribe is prepared to grant occupation rights within the outlying district known as the Masai Reserve in centres the names situation and areas whereof are specified in the Schedule annexed hereto on the terms and conditions following:—

"1. Plots of 2 acres approximately.

"2. Rental per plot per mensem Rs. 12.

"3. Separate plots for Europeans, Asiatics and Natives.

"4. Plots will be let under annual occupation licences.

Plot holders permitted to sell cattle for cash in the Masai Reserve.

648*
439
366

In view of the fact that cattle were being commandeered from the Masai and bought for cash, the question of the advisability of permitting the Masai to purchase stock with cash so obtained was brought forward by Mr. Hemsted in February, 1916. He represented that new blood would be beneficial and that the small numbers of cattle so purchased would not materially affect the situation and therefore he recommended that established traders be permitted to bring cattle to their stores for sale to the Masai for cash. The Governor approved this measure but considered that it would be a good thing if it could be arranged that the opportunities given to the Masai for purchase should be limited to higher grade cattle to the exclusion of native stock. The Rule under the Outlying Districts Ordinance, dated the 4th of February, 1913 (*vide* p. 91), was therefore cancelled by Rule in the "Official Gazette" of the 1st of March, 1916.

Itinerant trading. Mr. Hemsted's views.

In October, 1916, Mr. Hemsted submitted a comprehensive memorandum on the policy which should be pursued in regard to itinerant trade in the Masai Reserve. He deprecated any policy of throwing open the reserve to unrestricted itinerant trading. A large business had been built up by the better class of merchant at the trading centres, by which the requirements of the Masai had been greatly augmented and had to a very considerable extent been met. Itinerant trading would force these men to adopt similar methods and would lead to the discontinuation of trade centres. The Masai would be content if articles were brought to their doors and would never visit the centres, thus losing touch with outside influences and with the benefits accruing from competition between merchants. The question also affected the labour market, as thousands of Kikuyu would prefer making a livelihood by barter with the Masai to working for wages. The system of trading centres had proved both beneficial and acceptable to the Masai who appreciated the cheaper rate at which they could obtain goods, while they had found from experience that the system of itinerant trading led to many cases of theft or alleged theft.

The result of the establishment of trading centres and of the exclusion of the itinerant trader had been the establishment of shops by more than one hundred and twenty merchants in the Narok and Mara districts alone and the Masai had asked for eight more centres in these districts. Trade had been almost at a standstill in the Ngong districts, where there were only three trade centres, but the opening of

*648
439
366

twelve more had recently been asked for and Mr. Hemsted anticipated that there would shortly be from 250-300 plot-holders in the reserve if the present system was adhered to. Masai funds would therefore benefit to the extent of two or three thousand pounds a year from rent of plots.

Mr. Ainsworth's suggestions.

Mr. Ainsworth, to whom the memorandum was referred, considered that a system of monopoly would not achieve progress and that the confinement of trade to plot-holders was undoubtedly such a system. The conservative ideas of the Masai would, he thought, be more rapidly changed by encouraging the greater freedom of trade. Plot-holders would benefit by any increase in the cattle trade on a cash basis, particularly if the itinerant cattle trader was confined to making purchases for cash. Mr. Ainsworth accordingly suggested, for adoption as Government policy, the commencement as soon as possible of a property tax on the Masai, the prohibition of barter of stock except as between Masai and Masai, the encouragement of the erection of permanent houses by the chiefs and principal elders, restrictions on the importation of cattle into the reserve, the establishment of stock markets at trade centres at which cash sales should be enforced and the confining of itinerant traders to the various markets. Itinerant traders should only be permitted to enter the reserve on passes from District Commissioners and natives of other tribes should only be allowed in the Masai Reserve for limited periods unless properly employed by non-natives. Finally, he recommended that a schedule be drawn up of improvements necessary or desirable in the interests of the Masai and that the Masai be invited to associate themselves with such improvements and make an annual contribution towards their being undertaken.

Mr. Hemsted's comments.

Mr. Hemsted, in commenting on Mr. Ainsworth's suggestions, remarked that it appeared improbable that the Masai would ever develop into porters or agricultural labourers and that the only feasible policy appeared to be to develop them as stock breeders, in which capacity they would be a far greater asset to the country. Their ideas were already changing. About 20,000 bullocks and 150,000 sheep had been provided for the military authorities and forty-four trading centres had been set apart, wherein some two hundred plots had been leased on temporary occupation licences. Trade in the Masai Reserve was greater in proportion to population than in any other part of the Protectorate. He recommended that the introduction of cattle into the reserve should be unrestricted. The natural increase of the Masai herds approximated 90,000 per annum and the number introduced from outside would be negligible in comparison. Moreover, new blood was beneficial and the Masai stock was deteriorating owing to in-breeding. The necessity for supervision would render difficult and expensive any system whereby itinerant traders, as opposed to plot-holders, were permitted to sell in open market even at trade centres, and he hardly thought the policy of compelling traders to sell for cash to be practicable.

Further trade centres gazetted.

Two notices published in the "Official Gazette" of November 22nd, 1916, indicated the opening of twenty more trade centres in the Masai Reserve. The Notices read as follows:—

"The Government of the East Africa Protectorate with the consent of Segi, Engaroya and Ole Galishu, on behalf of the Paramount Chief and the representatives of the Masai tribe is prepared to grant occupation rights within the outlying district known as the Masai Reserve in centres the names, situation and areas whereof are specified in the Schedule annexed hereto on the terms and conditions following:

"1. Plots of two acres approximately.

"2. Rental per plot per mensem, Rs. 12.

"3. Separate plots for Europeans, Asiatics and Natives.

No modification made, February, 1917.

The question of the advisability of once more allowing free entry of cattle into the reserve was discussed in Executive Council, on the 20th of February, 1917, when it was decided that no interference with, or modification of, the existing arrangements was desirable.

Mr. Hemsted's suggestions for gazetting townships.

In October, 1917, Mr. Hemsted made proposals with a view to the regulation of trade in the reserve, and to the granting of facilities to persons, other than the licensed plot-holders. He suggested that all trade centres be declared townships, with markets declared therein and rules applied, and he proposed that no trading should be permitted except at the gazetted trade centres. He contended that the bringing of the Masai into touch with outside influences, the benefits of competition, the encouragement induced to place trade on a cash basis, and the assistance which would thereby be given to the native labour supply, were advantages which might be claimed for this system, while it would also be more practicable to enforce the veterinary regulations. The Masai, as well as all traders, except some Somalis, were in favour of confining trade to the trade centres. No fees would be charged to persons buying in the centres for cash only, but a schedule of fees for licences and of market fees was suggested.

The question was considered in Executive Council, of the 12th of January, 1918, when the consensus of opinion was that matters should remain as they were. The Officer-in-Charge, who was present during the discussion, did not wish to press his recommendations.

Further trading centres gazetted.

Five additional trading centres were opened by notice in the "Official Gazette," of January 30th, 1918. The notice read as follows:—

"The Government of the East Africa Protectorate, with the consent of the Paramount Chief, and the representatives of the Masai tribe, is prepared to grant occupation rights within the outlying district known as the Masai Reserve, in centres, the names, situations and areas whereof are specified in the Schedule annexed hereto, on the terms and conditions following:—

"(The conditions are the same as those previously specified.)

"W. J. MONSON,
"*Governor's Deputy.*

"NAIROBI,

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Ehoberyia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

If however there is to be no left-hand circumcision the *Il piron* elders arrange to hold the fire-drilling ceremony. 561

This ceremony finally binds together the *Il piron* elders and their moran charges. The warriors and the *Il piron* elders decide on the suitable site for the first warrior village. The warriors, together with their mothers, sisters and cattle move in close to the site chosen and for the time being occupy any deserted village in the vicinity. When the warriors announce that they are in readiness, the elders give orders that on the morrow all the cattle are to move to a new village. Next morning at sunrise, the *Il piron* tell the warriors to bring the heifers, four *sorie*, four calves (all black). The heifers must have perfect eyes, straight tails, each must have four teats, in fact they must be perfect in every way. The warriors must find also a young bull, either a black one, or a fawn one; it must be perfect in eye, have erect horns, and its dam must still be alive.

The warriors are warned that after the ceremony, the bull must not be castrated, or sold, or slaughtered for food.

The nine cattle having been selected, eight moran are called for, and eight girls. The warriors must have undiminished eyes, must not have killed a Masai, or have committed any serious offence against tribal laws; also they must not all be right-handed. [828]

The girls, too, must be free from blemish and must not have reached the age of puberty. The warriors don a short coat of black calf skin, make a circle of white round the eyes, down each cheek meeting under the chin, and each carries a bow in his hand. The warriors and girls then drive the cattle to the centre of the chosen site and prevent them from running away. The rest of the warriors watch this proceeding until as soon as the ceremonial bull and the heifer have taken up their positions; the remainder are driven forward to the waiting group. The warriors then seize the ceremonial bull by the horns and twist its head so that the right side of its face is uppermost. A piece of hide which must have been cut from the back of an ox which when slaughtered was found to be in perfect health, is then placed on the bull's upturned face. The *Il piron* elders who performed the first ceremony were dressed in robes made from sheep skins. New fire-sticks are then produced, placed on the bull's cheek and fire made by drilling, by the *Il piron* elders. [372] 302 [872]

The smouldering charred wood falls on the hide, pieces of frayed cedar bark are added, and the glowing ember is blown into a flame, when a fire will start with dry clean wood. The fire is then placed on the ground in the centre of the village; the place is given the name *oinpo*. Large pieces of wood are added. One elder is then left to look after the fire whilst the others walk in a circle round the assembled

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 324 462 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior clans, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (see Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep them would certainly bring bad luck on the raiders. 721 [682] [697]

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (see Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary novices or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [523]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not vice versa), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [594] [582] [563] [511] [412] [438]

/39 cont./

412 goat or sheep. Other shapes consist of such a piece of a thin tree
[237] trunk, which bears on its lower end a wreath of branches, or also
of a wooden handle on whose lower end, in slits placed crosswise,
[326] sit two short cross-sticks. The blacksmiths make ax and knife.
• 372 A little board (en daŋale) /40/ of soft wood and a twirling stick
[824] (ol biróŋ, el birondo) of hard wood (1)

1. Especially from the ol ŋaŋbóli (Ficus Sycomorus) and ol desegoŋ (Pluchea Dioscoridis).

serve as fire-lighter (Fig. 16). To make fire, one holds the little board firmly on the ground with both hands, while another kneels before it and, twirling on it with the stick, produces the necessary
[237] friction. After approximately half a minute, when the fine shavings rubbed off the board smoke, one shoves on some dried cattle-dung. As soon as this starts to glow, one puts brush on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves.
415 482 With the household equipment also belong the large leather pouches

881 /83 cont./
[304] words and blows by the assembled warriors, because they did not
[866] rear their son to have the hardening and self-control necessary for
[626] a warrior, while the weakling is reviled for a long time afterwards as ebiryo = coward, or tŏrónō = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are
[872] regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (Juniperus procera). The festival is called ol ogŏr l el aijok amerâte,
[252] that is, the festival of the circumcised boys. Unbelievable amounts (1)
[262]
[261]

1. I once observed that my four Masai boys together at an evening meal ate over 80 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take
[522] some fresh milk. People joke and laugh and everyone seems to
[521] want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which
881 the budding warriors will augment the paternal herds. Suddenly the
626 glances of a few who had just been joking darken and turn toward
152 a distant hut at whose door a solitary old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their imprecations into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

/208 cont./

782 bestrew the individuals with the blades of a fodder grass prized for cattle, and say the prayer. This runs: 'Ng ai pasinai, nja ijŏk ń gischu, jo ijok ń gischu kumok, ninguа ijŏk ĕlolońga = may God give us cattle, give us many cattle, keep us healthy. While driving the captured livestock together, they sing a song of praise, which begins with the words: Hai narok, oho, Hai kindera ije oh = black God, oho, we hurry near, oh!

In sickness, both the patient and his relatives pray for health for him. In serious cases of illness a black ram or a black ox is slaughtered, and part of its blood is poured on the floor as an offering to God. If the sick person is an old man or an old woman with numerous descendants, one slaughters a likewise black, gravid cow, whose calf is left lying outside the kraal for God, after the place has been sprinkled round about with the amniotic fluid.

796 Both in order to honor God and at the same time to supplicate him for something, the Masai celebrate feasts at approximately
782 monthly intervals; these usually take place on moonlit evenings, more rarely they start in the morning or early afternoon.

One of the most frequent supplication feasts (ol ogŏr = the supplication feast) is the ol ogor l ol geretti, which during some periods and in some regions is celebrated almost every month, in others at considerably greater intervals, by the married men and the boys together, in order to supplicate God for the preservation of the health of human beings and livestock. In the kraal a large fire is kindled
[372] with dry wood (from the ol oirien tree), upon which green wood with
[824] leaves (from the os segi tree) (1)

1. Cordia quarensis Gürke.

is tossed, so that a strong development of smoke comes about. A
[824] powder made from the wood and bark of the ol mogońgora liana, which smells like incense, is sprinkled in the fire. The thick column of smoke climbs toward the sky and takes the fragrance to God. Now one leads up a large black ram, washes it carefully
[824] with honey beer, and sprinkles it with the powder of the e matańguju tree. Then it is suffocated, drawn, and cut up. /209/ Each of the

ticks, tsetse fly, and disease.

*233 • 372 152 Burning grassland appears to be a deeply ingrained cultural trait. Young herdboys will seek out and ignite small patches of unburned grass, sometimes only one or two feet across. We have watched Masai moran striding across a dry plain lighting matches as they went, leaving a long line of small blazes gradually joining together behind them. We have watched junior and senior elders lighting fires, as well as boys and moran. We had marked plots that were burned as much as four times in one year. So we would add to the above explicit reasons for burning, the implied reason that they also burn simply because they get some satisfaction out of it.

182 372 [171] Fires are lit with matches. Possibly some are started from cooking fires that get away. Some fires, especially in wooded areas, are started by Wanderobo honey hunters (see below). But virtually all the fires whose origins we investigated were lit by Masai.

177 372 182 It seems probable that the coming of Europeans has altered the fire regime by providing large supplies of matches. It is far easier to light fires with matches than by using flint or other primitive means. With fires

182 177 372 [182] easier to light more fires are lit, just as in the case of hunting tribes who have received firearms; with game easier to kill, more game is killed. Control in these matters appears to be enforced by availability of tools and difficulty of accomplishment, not by any conservation ethic.

132 We questioned Masai, other Africans, and Europeans about lightning fires and never found the slightest evidence of lightning causing fires in the savanna country. There is no doubt that it ignites some fires in rim-rock or mountain areas, but we never even saw a lightning-struck tree in the study area. All the lightning we observed in storms was high, it occurred in heavy rain storms, or it was low in the region of Lake Victoria.

182 232 824 *233 There does not seem to be any discipline or organization to the burning by the Masai. Fires are started in dry grass when herds leave an area, but they are also lit when herds arrive in an area, if the grass is dry enough. They are even lit in pauses during rain storms.

The forest country on the hills is also burned at

'L-omon loo-'l-loñgoi oo 'm-ḅéria oo-'l-muran loo-'l-Maasae.

Concerning the shields and spears of the Masai warriors.

714 531 634 561

Itadua, 'l-loñgoi oo-'l-muran mepiki o-sirei ōbo; ōorioro.

The warriors' shields are not all of one design; they differ.

Metii ol-poror lemeata o-sirei lenye, meñgar sii 'l-oshon i-sirei, metii 'l-muran lo-'l-osho lemeata o-sirei lenye.

Each age and each sub-district has its own design.

Amu ějo ṗe ten etumo 'l-muran oo 'l-mañgati, neiyōlōuni 'njere ol-poror ōje, kake lo-'l-osho ōje.

In consequence, if the warriors meet an enemy, it is known to what age such a one belongs, and also to what sub-district.

Etii 'sirei ooñgwan loo-'l-loñgoi, o-sirei onyokye, o o-sirei orok, o o-sirei le-'l-loñgo, o o-sirei loo-'l-kigeluni.

There are four markings for the shields, the red one, the black one, the ornamental one, and the one for bravery [1].

Ore 'm-ḅéria oo-'l-muran mepiki sii o-sirei ōbo; ōorioro.

Likewise with the spears, they are not all marked alike.

411 531 634 561

Ore ten edoli em-ḅere, neiyōlōuni to-'l-ñgorat ol-poror ōje ol-openy, o ol-osho ōje.

If a spear is found, it can be ascertained by looking at the lower part to what age and also to what sub-district its owner belongs.

'L-omon loo-'m-baa oo-'l-móruak loo-'l-Maasae.

Concerning the arrows of the Masai elders.

Eata 'l-móruak i-sirei lenye too-'m-baa anaa eata 'l-muran too-'m-ḅéria.

The old men have special marks for their arrows as the warriors have for their spears.

Ten edoli em-bae, neiyōlōuni ol-eji lo-'l-openy o ol-osho lenye.

If an arrow is found, the generation and the sub-district to which its owner belongs can be recognized.

[1] The Masai make use of four colours in ornamenting their shields—white, red, black, and grey. White is obtained by mixing water with white clay; red clay mixed with the juice of the *Solanum campylacanthum*, Hochst., produces the red paint; black is procured from the ashes of *Marua uniflora*, Vahl., or from charred potsherds and gourds; and grey, which is but rarely used, is obtained from cinders.

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Ekebergia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

(Common Trees and Wood Plants of Kenya Colony) gives the Masai name of *F. Hochstetteri* as 'Ol-edeti' and identifies 'Ol-retei' (the name used by my informants) with a small tree growing on highland forest edges called *Maesa lanceolata* Forsk. 302 [824]

(v) Fat, sheep fat for preference, but otherwise the best bovine rib fat. [237]

(vi) Red ochre (*ol Karia*). [386]

(vii) Ornaments, usually comprising a metal clasp, wire bangles usually strung with coloured beads (*engiok*) and double-lobed copper weights (*esekerwa*). [301]

The method is as follows: The hair is grown until it hangs on the shoulders, that is, about nine inches long. This it does naturally and only in exceptional cases has to be eked out with cow hair. During the growing period the hair usually remains in a mop, but occasionally is braided into short pigtails.

As soon as the necessary length has been reached, the hair is parted transversely across the top of the head, that is at right angles to the European fashion. The largest portion, that at the back of the parting, is painstakingly twisted by hand into braided strands which are then grouped round the end of the 'siteti' stick or sticks (according to the number of pigtails to be worn) and lashed on with the gut string. The stick and hair ends are then bound neatly with the sheep skin strip so as to taper to a point.

The hair in front of the parting is divided into three equal portions and braided. The ends of each portion are bound together with gut string. The two side pieces which fall in front of each ear are then tied together by a cord under the chin, tight enough to hold them flat against the face. The central forelock' is finished off with a metal clasp.

If the warrior wishes to wear the ultra-smart 'helmet' style, the single pigtail is brought forward over the top of the head and its tip bound to the tip of the 'forelock' but as the pigtail stick is pliant and would therefore pull the forelock up, the latter is bound down by a further cord, passing across the forehead and tied at either end to the tips of the 'side-locks', which as we have already seen are firmly tied down to the face by the chin cord. As soon as the pigtail is securely fastened in the ridge position, the whole coiffeur is liberally coated with fat, tinted with red-ochre, and the 'helmet' effect is complete. [237] [386]

The wire bangles with coloured beads pass through the top of the ear, and the copper weights are of course suspended from the earlobes, which have been carefully lengthened during many years of youth — initially by the insertion of wooden plugs. In extreme cases the ear lobe has been so stretched that if it is desired to get it out of the way, it can be hitched right over the crown of the head onto the opposite ear! 301 304

276 bark of certain trees, a relic of the old cattle-raiding days, for when
561 the fit has passed the sufferer loses all fear and is ready for battle.
535 An unusual feature of the drug is that, once in a man's system, its effects last for life, and, given sufficient excitement, the man is liable to fits for the rest of his days.

561 The second day of *e-unoto* is called 'The Day of the White
535 Dance.' Soon after sunrise the *muran* went off into the bush to
386
[302]

[346]

[302]

FIG. 3. E-UNOTO CEREMONIAL

Above, some of the 49 'Pure Ones' dancing with their comrades; middle, the Ol-Otuno, *who is the first to be shaved, and who wears white diatomite on face and legs, leads his family round the* O-Singira; *below, a mother shaving her son's eyebrows as he sits on the beaded circumcision hide.*

[484] paint their bodies with diatomite. This white, chalklike substance is brought on foot from the Eburru Mountains near Naivasha in The Rift Valley. To bring it, two senior *muran* of good character are chosen, and they go off dressed in women's clothing and ornaments, carrying bamboo staves and cattle-branding tools as a sign that they are on a peaceful errand. Nearing the destination they stalk the diatomite as if it were game. Then they give the

561 warcry of old: 'I am the son of So-and-So,' and 'I am the Son of
535 Such-and-Such' and drive their branding irons into the outcrop.
[386] They fill their gourds with it and then return home and are
[574] treated with great reverence at Masai villages *en route*, being fed
[262] on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 30 yards apart, and marched to the village. Many wore ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured crescent-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: '*Endopok*!'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group
[534] led by an elder blowing a kudu horn (one of the very few Masai musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the *O-Singira* hut.

561 Late in the afternoon of this day the mothers of the 49 'pure
[302] ones' shave their sons' heads. All the hair, eyebrows included, is
[413] removed by means of a spatulate Masai razor. Milk is used in place of soap. Whilst being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the *Ol-Otuno* and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family
[825] home. Great care is taken that none is left lying about in the open
[534] in case birds should use it for their nests—a grave affront to the young men's sacred role.

During the course of the day the branches used as night barricades between the houses were replaced with new ones bearing
[789] green leaves. This is a symbolic act, meant to ensure that the *muran* may flourish as 'green bay trees.'

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the *Ol-Otuno* from his father, is driven into the bush and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the *muran* gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' whilst their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the *muran*, naked and still whitened with diatomite, came running back to his hut. There he received a deafening welcome from his family, whom he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of *muran* leading their families round the *O-Singira*, everyone shouting and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the *Ol-Otuno*'s heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'pure' 49 arrived, their shaven heads gleaming, white circles of diatomite like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the *O-Singira* whilst the *Ol-Otuno* was led to his hut. In front of his doorway was placed the hide on
[351] which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The *Ol-Otuno*, who seemed all too conscious of his role of scapegoat, then sat on the stool.

/78 cont./

714 53 [822] These[1] consist of curves, sectors of circles, lines and scallops, which are painted on the shield's surface in three colors, Pompeian red, black, and gray (1),

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs stand out in sharp contrast. One uses for this the red earth mixed [386] with blood or with the juice expressed from the fruit of the Solanum [824] campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black, [239] pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

714 53 721 178 [648] [669] Today considerable confusion in the shield escutcheons already prevails. The rarer the war expeditions of the Masai become, thanks to European domination, the more the old formalities of warfare are sloughed off, and ancient rules, which formerly were never transgressed, are today all too often ignored; their purpose has lost its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons in and of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 531 A shield escutcheon (Plate 1)[2] may contain: 1. the red warrior-emblem (os serat' onjugi), 2. the black emblem (os serat' erok) (1),

1. To which the rare gray also belongs.

3. the ornamental band (es segira l el oño), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

1. [i.e., the shield escutcheons--Analyst]
2. [See pp. 604-607--Analyst]

411 /131 cont./ The
[237] beautifully worked scabbard (eñ djaschúr, ñ djaschuri [Fig. 31 c and
• 386 33]) is made from goatskin or neat's hide and dyed with the red juice
[824] of the root of the shrub ol gneriandus l en doje (1):

1. Plumbago ceylonica.

on the back side is found a longitudinal middle seam and on the front side a corresponding longitudinal fold. Twelve centimeters from the upper edge /132/ of the scabbard there sits on the front side an oblong eyelet (ol gümë, el gumeschi) through which the belt (eñ gïmétá, ñ gïmétán [Fig. 33 b]) worn around the hips is
[237] stuck. The latter is made of neat's skin and decorated with several
[53] longitudinal folds. There is a hole (en audoto, n audot) at one end, and at the other one a small leather strap (eñg ene, ñg enda). The sword is worn on the right side and drawn with the right hand. Left-handed men wear it on the left side. This carrying method seems
[174] to point to the fact that formerly the people did not carry swords, but daggers, for a sword can be drawn with the right hand better from the left side, whereas a dagger is more quickly ready for a thrust from the right. Moreover, the sword, even today, is also frequently handled like a dagger.

714 According to the tradition of the people, the original Masai
178 shields were very small (shield = ol oño). They had a circular, flat
[173] shape, a round umbo in the center, and a diameter of 30 centimeters. The grip stick was fastened on the back side with small straps, which were drawn through the shield. The very light shield was carried with two fingers at the grip stick. Accordingly, the hollow of the umbo was very small. Gradually the shields became larger, and the reason for this may be sought in the frequent conflicts of the Masai with peoples
[237] carrying bows and arrows. Since in its original shape, the shield, with its enlargement, lost firmness, this was increased in that a wooden frame (ol deretá, el deréta) was sewed around the outer periphery with strips of goat or sheep skin, the shield was bellied out, and, to preserve the longitudinal convexity, two straps (e rescheta)

/147 cont./

302 Axillary hair /148/ and eyebrows are shaved. Women also shave the pubic hair, whereas men pluck it out with the fingers or tweezers.

302 714 Young warriors let the hair grow and, when it has the necessary length, twist it between two fingers, through which apparently arise little balls, which, on closer inspection, prove to be spirals interlaced and rolled together. Somewhat later it is twisted together

[386] into strands (ol babet, el babet) with red paint, a mixture of animal fat and red earth, which hang entangled around the head. Further-

[177] more they are lengthened by twisting in fibers of the bark of the baobab (ol mĕsĕrĕ) and of another tree called ol retéti, in order to form out of that the braid-coiffure peculiar to the Masai warriors, but adopted by many neighboring tribes (Fig. 64, 65, 66 [ol daiga, el daigan]). For this the hair is parted crosswise over the head from ear to ear, and then that of the front half of the head is divided into three parts, one over the forehead, the other two at the

302 and girls, warriors and women (not, however, old men and women)
[751] come into a region in which they have not yet been, they paint
their faces and chests with its earth as protective magic against
[531] sickness and misfortune in this new land. The women paint the
face on both sides with two concentric rings on the cheeks, or with
two or three lines running parallel, which run from the corners of
the mouth vertically to the eyes, then go around these in an out-
ward curve, /151/ and turn vertically upward over the outer corner
[824] of the eyes (Fig. 69 a and b). One uses for this the juice of the
[386] root of ol gneriandus l en doje-plant (Plumbago ceylonica), mixed
with fresh blood.

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75 (People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up

[177] inside a hyaena. The administration frowns on this

[178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 Food: Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho

234 (maize meal), milk, meat, and occasionally blood. The

462 cows and sometimes goats are milked by the women and little

234 girls. The milk is collected in large calabashes. These

415 calabashes, ochre colored and sometimes ornately

[531] decorated with beads, are almost as much a symbol of the

[384] Masai as the ochre blankets or cloaks, moran spears and

[291] hair styles.

231/ When they have enough blood, the thong is released and
272 the small wound covered with mud or dung, and the animal runs off apparently none the worse for wear. The blood is drunk warm, or mixed with milk.

194 Although they are thin, the Masai appear adequately nourished, and they have great physical endurance. The Ministry of Health doctors told us that Masailand was the only part of East Africa in their experience where the children did not show signs of Kwashiorkor or the other diseases of malnutrition that are so common with Africans. Gale (1960) noted that the greatest defect in the diet of the East Africans is lack of animal protein, but this is true of the Masai only in times of extreme drought.

291/ [34] Clothing, Jewelry and Utensils. The traditional clothing of Masai men and women is an ochre colored cloth of cloth, usually gathered over one shoulder. Some wear (292) skins, usually of sheep. A cow hide is used for a rain coat. Most Masai men wear sandals made from heavy leather or old rubber automobile tires. Very little else is worn by either Masai men or women, except near missions where the women occasionally wear more concealing clothes.

Ore ten edoli em-ḃere, neiyōlōuni to-'l-ñgorat ol-poror ōje ol-openy, o ol-osho ōje.

Concerning the shields and spears of the Masai warriors.

714 531 639 561

The warriors' shields are not all of one design; they differ.

Each age and each sub-district has its own design.

In consequence, if the warriors meet an enemy, it is known to what age such a one belongs, and also to what sub-district.

There are four markings for the shields, the red one, the black one, the ornamental one, and the one for bravery[1].

Likewise with the spears, they are not all marked alike.

If a spear is found, it can be ascertained by looking at the lower part to what age and also to what sub-district its owner belongs.

411 531 639 561

'L-omon loo-'m-baa oo-'l-móruak loo-'l-Maasae.

Eata 'l-móruak i-sirei lenye too-'m-baa anaa eata 'l-muran too-'m-ḃéria.

Ten edoli em-baa, neiyōlōuni el-eji lo-'l-openy o ol-osho lenye.

Concerning the arrows of the Masai elders.

The old men have special marks for their arrows as the warriors have for their spears.

If an arrow is found, the generation and the sub-district to which its owner belongs can be recognized.

[1] The Masai make use of four colours in ornamenting their shields—white, red, black, and grey. White is obtained by mixing water with white clay; red clay mixed with the juice of the *Solanum campylacanthum*, Hochst., produces the red paint; black is procured from the ashes of *Maerua uniflora*, Vahl., or from charred potsherds and gourds; and grey, which is but rarely used, is obtained from cinders.

afforded by cereals enfeebles, and is only suited to the despised tribes of the mountains: while to feed on meat and milk gives strength and courage. When cattle fail them they make raids on the tribes which they know to be in possession of herds. They say that Engai (Heaven) gave them all that exists in the way of cattle, and that no other nation ought to possess any. Wherever there is a herd of cattle, thither it is the call of the Wakuafi and Masai to proceed and seize it. Agreeably with this maxim, they undertake expeditions for hundreds of leagues to attain their object, and make forays into the territories of the Wakamba, the Galla, the Wajagga, and even the Wanika on the sea-coast. They are dreaded as warriors, laying all waste with fire and sword, so that the weaker tribes do not venture to resist them in the open field, but leave them in possession of their herds, and seek only to save themselves by the quickest possible flight.

[411] "The weapons of the Masai and Wakuafi consist of a spear, a large, oblong shield, and a club round and thick at the top, hurling which with the greatest precision, at a distance of from fifty to seventy paces they can dash out the brains of an enemy: and it is this weapon, above all, which strikes terror into the East-Africans, the Suahili with their muskets not excepted. The Wakuafi shelter themselves behind their long shields until they become close enough to the enemy to make good use of their clubs. They conquer or die, death having no terrors for them. . . . . .

[961]

"The two kindred tribes, the Wakuafi and the Masai, hate each other mortally, which is a fortunate circumstance for the weaker African tribes: since, were they united and ruled by one supreme head, there would soon be an end to the existence of the other East-African tribes, who could not possibly resist them, the savage Gallas themselves not excepted: for the latter fly before the Wakuafi and Masai, and, at the most, only prove dangerous enemies to them by stratagem and cunning, but never cope with them in a fair and open field.

"As regards the physical conformation of the Masai and Wakuafi, their forms are tall and slender, with handsome and rather light-complexioned features. . . . . From their beauty of form the Masai and Wakuafi slaves, especially the young females, are much sought after by the Arabs and Suahilis of the coast: and they become much attached to their Mohammedan masters, provided always, that the latter do not require from them any kind of labour which is repugnant to their habits, such as tilling the soil and similar occupations.

"The Wakuafi and Masai as pastoral tribes, consider themselves the exclusive possessors of the plains and wildernesses, with their springs and rivers, and they do not attack the inhabitants of the mountains, so long as they confine themselves to their mountains, and refrain from descending into the level country to turn it to agricultural or pastoral purposes. It is said, however, that very recently, they have resolved to take possession of the mountain Kadiaro* to facilitate their freebooting expeditions against the Galla, Wanika, and Suahili, and to exclude these tribes of the coast from access to the interior. . . . . ."

Discovery of the source of the Nile.

The Masai first came into prominence in connection with the development of Africa and with geographical discovery by the discovery of the source of the Nile in 1875 and by the interest then aroused in Europe, both in Uganda and in the possibilities of opening up a more direct route from the sea than that one then in use from opposite Zanzibar to the southern end of the Victoria Nyanza. To the opening of this route the most serious difficulty to be overcome was the negotiation of the country occupied by the then formidable and dreaded Masai, of whom practically all that was known was the rumour of their ferocity and prowess in arms. East coast traders had repeatedly crossed Masailand, but no European had attempted the task.

Dr. Fischer's tour to Naivasha.

In 1882, a German naturalist, named Dr. G. A. Fischer, was sent out by the Geographical Society of Hamburg to explore the possibilities of this route. He started from Pangani, opposite Zanzibar, with a caravan of 120 natives and porters,

881 sandals, they chose a handsome shield of buffalo hide,
[714] beautifully made, elliptical in shape, and warranted to stand a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never *make* shields or spears, though there is nothing in the possession of which they pride themselves so much—
881 they returned to the kraal, and then called for an El-konono.
563 This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
881 murderous-looking weapons. After a careful examination
411 Moran selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost *uniform* width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

881 These important acquisitions made, our hero now pro-
[302] ceeded to dress himself up as became his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[301] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[291] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus stood forth the complete military masher, ready for love or war.

882 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young, unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

is called an *ol emal*. The boys may carry knives for defence but not 561
spears, for it is said that a spear is a sign of force, and their quest [411]
is a peaceful one. Each boy must carry a bow, for the bow is a
token of peace. Furthermore it ensures that any reasonable request
the boys may make during the *ol emal* will be granted. No Masai [574]
may refuse the request of one who carries a bow in his hand. The
boys take no arrows with them. They visit all the principal villages
and in dance and song they announce the object of their visit. They
then seek out all the bigger boys of the village and add them to their
number. If they wish to spend a night at a village they beg an ox
for food from the elder of their sponsor's age-group. Elders of other
age-groups present them with milk to drink. In this way the news
is spread far and wide and finally the boys, now of considerable [431]
numbers, return to the elders who despatched them, taking as a gift
a large quantity of honey. Then a special village is erected in which [361]
only the boys' sponsors and their families may live. The boys borrow
ostrich feathers and lion mane head-dresses from the warriors and [237]
on the appointed day they collect at the elders' village. [714]

The ceremony commences with a dance called *engibata;* for this, [535]
the boys form three files, one wearing ostrich feather head-dresses,
the second wearing lion mane head-dresses, and a third, of boys who
have decorated their bodies with broad stripes of white earth to
resemble zebras.

The latter must be quite nude; those who wish may wear thigh- [291]
bells. They may not carry weapons of any sort, but each carries a
thin wand, the length of a spear. After much dancing, the boys
form a procession and walk round inside the circle of huts following
two leaders, one of whom blows a Kudu horn from time to time. [782]
The procession then halts and the leader prays aloud to *Engai Narok*
—the Black God, to shower his blessings on the boys. This prayer
has been taught them beforehand by the elders, some of whom stand
by and prompt when necessary. When the prayers are over, the
elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return
is then made to the village and the elders bring a fire-stick, the one
called *ol-piron*, also a male circumcision knife and a small dead bird.
This bird may be of any kind other than a dove. The elders break
the fire-stick before the assembled boys. They then place a curse
upon the circumcision knife and taking the dead bird they break one
of its legs and pierce one of its eyes—presumably as an indication of
the ill which will befall any boy who dares to be circumcised before
the curse is taken off the knife.

In this way, the elders formally lay claim to the sponsorship of
a new age-group. From that time the boys refer to their sponsors as
Il-piron, whilst the elders refer to the boys as *Il-piron*.

branchlets. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *laikutos* and are free to go anywhere "like women," and, in fact, may even visit the *ensopitos* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *ensopitos*, which are danced by the novices alone. [535]

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior.

951
541
542
[531]
[511]
[514]

The new warriors now form themselves into groups, and organise the building of villages, which will be their headquarters. These villages are the *ensopitos* of the warrior groups (see below).

[57]
[10]
[54]

PART III.—WARRIORHOOD.

The Age-Group System.—The general word denoting an age-group is *ariaiai*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single re-setting ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *jonjinokor* and *nonyapilongi*.

[57]

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *jonjinokor* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *jonjinokor* and a *nonyapilongi*, must move out together, leaving the next *jonjinokor* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *nonyapilongi*, and in due course yet a third group will be initiated and enter the age-group as *jonjinokor*, after which no further transfer of a novice group can take

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 324 462 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (see Murder), all uninjured, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep them would certainly bring bad luck on the raiders. 721 [682] [717]

Part X.—Miscellaneous Notes.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a fire [illegible] neighbouring huts. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (see Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary warriors or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [823]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not vice versa), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [594] [582] [563] [411] [412] [438]

PRINTED NOTES OF THE BAND.

[P. 466 - B]

13:Huntingford E-4 (no date) 1953 FL.12 Masai FL.12

Warriors do their hair in pigtails, *ol-taika*; other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrap* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 441 [412] 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34b is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 414 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Neiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, "the mediator between God and men." But the Masai word *naiterukop* means no more than "that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-epe*, the moon, is grammatically masculine. 771 774 [114] 776 [182]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

[626] trample underfoot. The one now scorned had also wanted /64/ to
[152] regale guests with it on that day, but no one came to him whose son
showed himself to be a tŏrŏnŏ. While the old people, as long as
[535] there is something to eat and drink, are only interested in that, the
[533] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /Ill. 18 appears
here./

[758] The circumcised boys, soon after the completed operation, went
into the huts of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
blood, and meat. During the following period, until complete
[411] healing, they roam in small bands with bow and arrow -- they do not
[223] use the ordinary bows, but ones only about half as long, made only
for this occasion: the arrows used with them have a wax ball at the
tip -- through steppe /65/ and forest, in order to shoot small birds,
the skins of which they string by the beaks on a cord, which they
place garland-like around forehead and occiput. Between the bird
[301] skins the es sibolio (sing. os siboli) -- as the newly circumcised ones
[302] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay (en
doroto). On the first day they go out, they slaughter a white goat-
[262] buck on the steppe. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called ol
ǧine l ol benek (ol ǧine = the goat buck, ol benek means the tree
with whose branches they make the fire). Every evening after their
excursions they return to the kraal and to the huts of their mothers.

881
591 As soon as the young girl, who until then has lived in the warrior
kraal in the most unrestrained freedom, concludes from certain

Ill. 25. Warriors.

561 It is to be inserted here that the girls who have been circumcised in the period from the beginning of a series of circumcision years to the beginning of the next series are counted in the age class in which the boys circumcised within the same period up to the en gebata festival are reckoned.

/73/ As long as the members of an age class still belong to the warrior standing, those living in each area have their own head, the speaker (ol aigwenani), whom we shall meet again in the warrior
561 kraal. But if those belonging to one ol borōr are all married, they
634 are given a head for the entire district, the ol aunoni, whom not only the people of his age class, but also those of all younger age
[791] classes are obliged to obey. It is the business of the ol oiboni to arrange matters so that in each district only one holds this rank. The discussions with regard to his appointment begin even before all the ol borōr members have left the warrior standing. The speakers of the district go to the ol oiboni and put their request before him.

/76 cont./

561 According to this, the institution of the age classes together
701 with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors.
[703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 As soon as the circumcision wound has healed, the circumcised
702 exchange the long apron (ol gelí, el gelíni) for the short skin-cape
561 (e megiti, /77/ megitin), again put on their ornaments, anoint their
[291] bodies with red paint and, after they have once more shaved their
[302] heads, set out as el barnot (sing. ol barnoti, formed from barno = bald-headed), armed with spear, club, sword, and shield, into the
[411] bush to celebrate the ol geteń l od gutui. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect
[342] a kraal of thorns for themselves or even build small huts out of leaves.
701 The festival consists of consuming large quantities of meat and noth-
702 ing but meat. For this each participant furnishes a fat ox obtained
561 from his father, which must be plain-colored, black if possible.
[262]
[822]

/77 cont./

561 of all the age-fellows is first convened, so that they /78/ may choose
791 a delegation from their midst. To it belongs in the first rank the speaker, then a rather large number of the strongest and handsomest el barnot. All are provided with rich adornment, as well as beautiful weapons. Each ol barnoti has brought along a fine head of
[431] cattle. The large herd formed by this is taken along by the delegates as a gift for the ol oiboni. When they have then presented their request to the mighty one, he directs them to come the next day, when he imparts the answer by giving them, for example, the name el gischon. The ones circumcised during the period from 1896 to 1901 were given this one. It is supposed to mean: the generation after those weakened and impoverished by the rinderpest. After the

714

714 influence of the Moschi military station better. The answer to the
531 question concerning the meaning of the black bows was almost always
634 merely that they probably served as ornamentation, since, with the
184 application of the warrior emblem on the one side, the other half
791 of the shield would look unattractively empty, and only a few old men
179 opined that it was originally a lineage emblem of the En gidoñ. This conception seems to me the right one, and it would explain why the emblem /81/ has been commonly used in Kisongo from time immemorial and then also came to Loita after Mbatyan's death.

714 The lineage emblem is almost never found on the shields of
531 today: thus I did not come across it until I had drawn by a number of
613 old men the shield escutcheons carried by them in their youth. The illustrations of Plate 2[1] show a collection of lineage emblems. We see there that the emblem is sometimes applied on the front of the shield surface, sometimes on the back of the shield. While the
[561] warrior emblems have remained the same for a long time, the lineage emblems were always quite variable, and it seems that each age class made up its own.

1. [See p. 608--Analyst]

714 /82 cont./
531 nowadays the warriors, out of boastfulness, go on using shields,
178 with unaltered escutcheons, taken as booty in battle with Negroes (1)
[721]

[177]

1. The fact that Negroes also carry shields of the Masai type, and, to be sure, with similar escutcheons, is a consequence of the above-mentioned Masaization.

or half-breeds of Negroes and members or bastards of the Masai people or, with the present discord, even those of other Masai.

714 The shields of the el barnot, the recruits, do not appear as gaily
531 colored (Plate 1: Figs. 1 and 8). As soon as the youths have received
701 the shields, they ask the most esteemed of the married men, a former
561 speaker of the warriors, for his consent that they be permitted to paint a black emblem on the surface of the shield. At the time he gives his permission, he also determines the form of the emblem, that is, he does not invent a new one, but chooses one from among the old familiar ones. With this and with an ornamental band only drawn in

Ill. 30. Shield escutcheons of young warriors.

/94 cont./
726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with
726 it. Many of the latter smear themselves on forehead and cheeks with
[237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
[725] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind will be deceiving concerning their direction of march. During the
704 march comradeships are formed by two men in each case, each of
701 which calls the other os sirit ai, that is, my companion. /Ill. 37 ap-
726 pears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the eñg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/95 cont./

726 the time for the attack. /96/ The leader of the section is one of the
[701] above-mentioned benefactors, recognizable by an ornament called
[714] el dorogén or el gabatén, which consists of strings of iron or glass
[431] beads and is worn around the right lower-arm, a gift of those who have benefited by his generosity.

708 Accompanying the warriors are one or more surgeons (ol abáni, el
726 abák), whose duty is the immediate treatment of the wounded. They choose their "dressing station" approximately half an hour from the battlefield on an elevation made known and easy to find.

726 Toward midnight the spies (ol aigedalani, el aigedalak) set out to go to Kahe. On the way they adapt their externals in clothing and ornaments as much as possible to that of the Wakahe and hide /Ill. 38 appears here/ shield and spear along the way. With enviable inoffensiveness they move about among the foreign populace, trusting in their amulets. With a little fresh cattle dung and a few tail hairs plucked from the Kahe cattle, as proof that they have actually seen cattle, they return to the warriors in great haste.

/96 cont./

726
714
• 411

Ill. 38. Last instruction of the warriors before the battle.

726 The warriors have broken camp about four or five o'clock in the morning and after sunset reached dense bush one to two hours away from Kabe, where they now camp. They are highly elated about the information from the spies, rich booty now indeed seems assured.
726 704 Soon after midnight the battle march is begun. The warriors split up into five different troops. The el ebéta (sing. ol ebét) hurry ahead as patrols and, having come close to the goal, hidden in the foliage of tall trees, take /97/ a look around: following them at a distance of a few thousand meters, each led by an ol oiñoni, are the three or four divisions of the el ároi (sing. ol áro) = buffalo, each of which goes in another direction toward the hostile area. They consist of the most dashing men, and the success of the attack depends primarily upon them. Behind the el aroi, swarming out at some distance, follow the largest divisions, the el dimito (sing. ol dim) = herds, the flanks of which are made up of picked men, the el

/98 cont./

727 it for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutililated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as ebor além. But
[784] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few
[583] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child
[577] exactly like his own. A ceremony of adoption does not exist; the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the home kraal: in the evening a thorn fence is again built, and at the same time the share of the booty destined for the ol aunoni is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit eating. It is called, for example, kirima, because men fell on both sides. Other names are

832 (without, however, one's being able to speak of steatopygia), robust
826 hips, deep umbilical cavity. The lips must not stand out, either by form or color, so that thin and dark lips are considered beautiful. For
[302] tongue and gums an artificial black coloring is regarded as beautiful:
[824] for this one uses the juice of Clerodendron ternatum (1).

1. Ol oitero 'gischo 'el nijaba.

Prominent muscles in the upper arm and calf or a fat belly are regarded as ugly and are contemptuously compared with the like characteristics of the Negroes, or one also speaks mockingly of club arms, or calves with a goat stomach stuck in them, or of a /126/ diseased swollen abdomen. Among girls one places value on small bones, small, narrow hands and feet, as well as erect, hemispherical
[302] breasts. By means of painting with red earth one seeks to enhance the dark skin color by the contrast of colors.

XV.

000 Weapons. -- Spear. -- Sword. -- Scabbard, belt, shield. -- Club. -- Bow. -- Arrow. -- Firearms.

• 411 The foremost weapon of the Masai is the well-known, beautiful, large spear /Ill. 41 appears here/ (Fig. 27, see pp. 166 ff.). It constitutes all the pride of the warrior, who would sooner part with anything but that. The spear consists of three parts: the /127/ upper iron blade, the middle wooden shaft, and the lower iron shoe. At the lower end of the blade and at the upper one of the shoe, respectively, one finds a socket by means of which these parts are
411 stuck on the wooden shaft. The ancient spears had blades 30 centi-
178 meters long and 20 centimeters wide, with short sockets, a long wooden shaft, and a short shoe. Gradually the socket of the blade was lengthened up to 40 centimeters, and the shaft was shortened in the same proportion. Such spears are still to be found only rarely today, and then the blade on them has been ground more or less narrow in the course of the years. Later, fashion lengthened the

411 wide blade up to approximately 80 to 85 centimeters and at the same
178

Fig. 40. (1a)

time decreased the socket to 10 to 12 centimeters. Fine specimens of such spears are still frequently found. The modern spear of today has a narrow blade, usually about 80 to 85 centimeters long, sometimes even still longer, which measures only four to six centimeters at its lower, widest part, a short wooden shaft 10 to 12 centimeters
411 long, and a meter-long shaw. The blade is almost always brightly

/137 cont./

411 polished, seldom unpolished and black. The latter is not a sign of
[134] [77] [137] [137] [137

/120 cont./

411 (199) 411 191

sometimes also types, which, however, only in exceptional cases do not closely hew on the general Maori shape. The essential difference between the two types is that the axes of the cross-section (Fig. 30) in /120/ the blade prepared by the Maori smiths stand obliquely to each other; in the one made by the Negroes, at right angles to each other. Another difference appears in the lower end of the blade among the long, narrow faces (Fig. 31), which among the former spears is more heart-shaped (a) or also spoon-shaped (b).

among the others usually more spade-shaped (c). The first two
[177] shapes, especially the spoon-shaped one, have in more recent
times also been imitated by Negro smiths, and, to be sure, as I
/130/ was able to determine in several cases, on the express
[184] order of Masai warriors. While the spear shoe is circular above
{422} and below as a rule, one also finds such, particularly in the Ol
Bruggo province, among which these parts have a rectangular
diameter and one which notches (Fig. 30) are made as owner-
ship marks of various meanings (1).

1. They may mean district, of home, tribe or lineage, etc., of the owner.

/Figs. 30-32 appear here./

411
482 On the march the spear is carried, either on the right or on the left, in three different ways, among which the warrior alternates according to convenience. 1. With outstretched arm hanging down, the hand grasps the spear shaft at the spear's center of gravity. The spear lies horizontally, the tip /131/ directed forward and slightly outward. 2. The spear is carried in the arm, similar to the position of the "gun in the arm." With thumb, index finger, and middle finger the spear shoe is grasped in the middle, as one

[TEXT CONTINUED ON PAGE 173]

/131 cont./

411 grasps a pencil in writing. 3. The spear is carried on the shoulder
482 upon which its center of gravity rests. The point is directed diagonally upward: the hand encircles the spear shoe with the fist.

411 The sword (Fig. 31) consists of the round, wooden hilt, provided
178 with transverse grooves, and the iron, double-edged blade. The former, according to the statements of the Masai, has not changed, whereas the blade had undergone a great transformation. Originally it was only 30 centimeters long and had its greatest width of barely two centimeters in the center. At that time the sword resembled a double-edged dagger (Fig. 32) and was suitable only for stabbing.

411

Fig. 32 a. (1/7)

Fig. 32 b. (1/10)

411 Gradually the blade became longer and, in order to be able to use it
178 better for cutting, its center of gravity was put closer to the tip, so that the blade now 60 centimeters long has its greatest width of three centimeters only five centimeters away from the tip. What was said
[191] about the cross-section of the spear blade also applies to that of the sword blade: its cross-section is slightly S-shaped (Fig. 32 f), if it is made by Masai smiths, straight if by Negro smiths (Fig. 32 e). The

411 /121 cont./ The
[237] beautifully worked scabbard (el diaschúr, ildiaschuri [Fig. 31 c and
386 33]) is made from goatskin or neat's hide and dyed with the red juice
[224] of the root of the shrub ol gueriandus Lem doir (1):

1. Plumbago ceylonica.

on the back side is found a longitudinal middle seam and on the front side a corresponding longitudinal fold. Twelve centimeters from the upper edge /122/ of the scabbard there sits on the front side an oblong eyelet (ol ghmá, ol gumachi) through which the belt (el ghmáni, ilghmáin [Fig. 33 b]) worn around the hips is
[237] stuck. The latter is made of neat's skin and decorated with several
[53] longitudinal folds. There is a hole (en audoto, n audot) at one end, and at the other one a small leather strap (ebg ene, ilg ende). The sword is worn on the right side and drawn with the right hand. Left-handed men wear it on the left side. This carrying method seems
[174] to point to the fact that formerly the people did not carry swords, but daggers, for a sword can be drawn with the right hand better from the left side, whereas a dagger is more quickly ready for a thrust from the right. Moreover, the sword, even today, is also frequently handled like a dagger.

714 According to the tradition of the people, the original Masai
178 shields were very small (shield = ol ebo). They had a circular, flat
[173] shape, a round umbo in the center, and a diameter of 30 centimeters. The grip stick was fastened on the back side with small straps, which were drawn through the shield. The very light shield was carried with two fingers at the grip stick. Accordingly, the hollow of the umbo was very small. Gradually the shields became larger, and the reason for this may be sought in the frequent conflicts of the Masai with peoples carrying bows and arrows. Since in its original shape, the shield, with
[237] its enlargement, lost firmness, this was increased in that a wooden frame (ol dereni, el derénu) was sewed around the outer periphery with strips of goat or sheep skin, the shield was bellied out, and, to preserve the longitudinal convexity, two straps (e rechata)

/132 cont./

714 178 [237] were drawn from each end of the grip stick to the grip (Fl. 34). The present-day shields, like the former ones, are also made out of buffalo or giraffe skins. For better protection of the hand, the umbo is lined with a round patch of the same skin, and, on top of that, in order to prevent the chafing of the finger knuckles, with a piece of soft sheepskin. The shields now in use, measured with the convexity, are 1-1.10 meters long and half as wide. The escutcheon is painted on the front surface of the shield, whereas the reverse side often -- not always -- bears the lineage coat of arms.

[531] [613]

714 411 482 On the march the warrior carries the spear with one hand, the shield in the other one. With arm hanging down, the hand grasps the shield grip so that the smaller diameter of the shield is vertical and the painted surface is turned outward.

411 [324] [237] The club (ol gimin, el gimi [Fig. 38]) is now made out of one piece, generally out of ordinary hard wood, especially from the tree ol oirish and ol olborbenek (1):

1. Dregea rubicunda K. Sch.

only the clubs of the speakers, which serve solely for gesticulating, are made out of ebony wood or rhinoceros horn. The old clubs /133/ consisted of two parts: the spherical head, into which the sticklike handle was stuck through a central bored-hole. The club does not actually serve as a weapon of war: except for accompanying a speech, it is used almost exclusively in fights and -- to break marrow bones of slaughtered livestock. The present clubs are about 40 centimeters long, their head has a diameter of five to six centimeters. A clublike cudgel (es olie), especially out of the wood of ol gedarder (1).

411 178 [412] 411 [324]

1. Ochna Merkeri Gilg.

often takes the place of the club. The club is worn in the sword belt: it sticks in it as a rule close to the sword, with the head upward.

Fig. 34b. Old shield-form (1/10).

Fig. 35. (1/10).

411

Fig. 36. (1/10)

Spear, sword, shield, and club are the weapons of the warriors. Old people never carry the shield, rarely a small, to some extent cast-off spear, or an old sword, but for the most part only club and bow with arrows. They need bows and poisoned arrows for the defense of their own kraal or against predatory animals. The Masai impoverished through cattle epidemics, who live apart from the others and erroneously call themselves el dorobo, also hunt game with them. The bows (Fig. 36) are two-shanked, simply curved.

[887] [714] [184] [922]

/133 cont./

411 and not flattened in the center. The string is twisted from the back
[283] tendons of cattle. As a hunting trophy one often winds a couple of
[237] strips of hide from the /134/ slain animal around the bow. The point of the arrows [Fig. 37] (em baif, m ba) has the customary "arrow shape" or is lancet-shaped or awl-like. Its tang, on either
[237] side, bears a tight row of barbs made by notching. It sticks into a
[136] wooden shaft, the lower end of which is notched and bears a three-part, rounded feathering made from the feathers of the carrion vulture (Neophron percnopterus), which one always sees in great

Fig. 37

/134 cont./

411 [136] [237] flocks in the branches of the trees surrounding the kraals, waiting for some kind of animal waste. In addition to the iron points, one also finds awl-shaped wooden points: the latter are often poisoned, the former only rarely. The Masai do not make the poison (en [439] dugrai) themselves, but buy it from Wandorobo, who obtain it from /135/ the olmoridjoi (Acocanthera abyssinica) tree by boiling the roots and the wood. The arrows are carried in a leather quiver (e modian, modiani), which is slung over the shoulder on a leather [237] strap. It consists of a tube 70 centimeters long and made out of neat's skin, with a bottom stitched in and a similarly worked, twelve-centimeter lid that can be turned up high.

Firearms, which at times almost entirely replaced the spears and bows among sedentary Negroes (1),

1. For example, in a few areas at Kilimandscharo.

[648] [727] are not generally carried by the Masai. Although in the battles with the Protectorate Troops they have at various times captured guns and ammunition from fallen Askari, I never observed or learned that they used these weapons. They never bought muzzle-loaders from trade caravans, and the ones that I found in one of their kraals showed by the lack of cock or piston, or by other damage, that they were not carried along by the Masai for the [177] purpose of use, but merely as trophies. It was not until April, 1902, that a troop of Masai warriors armed with English Snyder breech-loaders came into my field of observation. The troop came from the Masai province of Ol bruggo, and, to be sure, from the English station of Nairobi, located on the Uganda railway, and attempted an invasion in the Kilimandscharo area of Rombo. With a loss of approximately 20 per cent dead and bootyless, however, they were sent home by the Warombo, armed only with spears.

233 and first used it successfully on a large scale at the end of the eighties.
232 One or several cuts are made with a knife in the underskin of the bridge of the nose of the animal to be inoculated, so that blood flows copiously from the wound. At the same time the chest cavity of an animal

Ill. 59.
Cow inoculated on the bridge of the nose against tuberculosis.

Fig. 58.

that has just died is opened and from it is taken a fine-sized piece of the lung, greatly swollen and filled with a watery fluid. One rubs the wound thoroughly with this piece, so that the fluid penetrates well. Soon after the operation the nose swells considerably and mucus flows copiously from the nostrils. The sickness comes out of the nose, the people say. The healing of the external wound is sometimes connected with a considerable alteration, which not so rarely leads to a purulent inflammation of one eye, indeed to the complete loss of it. The ulcer heals with the formation of a thick,

/170 cont./

232 233 heavy scar often five centimeters high. /171/ through which the inoculated animals, which are now supposed to be protected against becoming sick with tuberculosis, are permanently marked. Numerous observations in this direction showed me the justification of this view. [176] [191] The ol olbonI kibetyas is regarded as the inventor of the inoculation method.

In some years, and, to be sure, in the rainy season, great [136] multitudes of dark green caterpillars one to one and a half inches long are found in the grasses of the steppe. Cattle that eat the caterpillars are stricken with ele ga el gurt (ol gurto = the caterpillar). As symptoms of the sickness I observed: first a few hoarse coughing sounds, then giddiness, which rapidly mounts and makes the animal stagger as though out of drunkenness; soon it lies down and is brought to a standing position only with difficulty, only to lie down again after a few minutes, whereupon death occurs often after only half an hour. [Bil] The treatment consists of bloodletting by an arrow shot (Fig. 78) into the jugular vein, whereby one to one and a half liters of blood is emptied out. Though that recovery is reached after just a few hours, as I observed in over 100 cases (1).

1. The microscopic examination of blood slides (ear, heart, clean) of sick and dead animals gave a negative finding (Oberarzt /staff physician/ Dr. Gaulhofer). I observed the appearance of masses of thecaterpillars in March, 1898, in the steppe south of Kilimandscharo, in December, 1902, in the steppe southwest of Kilimandscharo, in the entire region between the latter and Lake Manyara, and in April, 1905, in Daressalam /Dar es Salaam/.

[199] In another case, one colour head of cattle, after two had already died of the sickness, the other two, through the infusion of an emetic consisting of a mixture of sugar-cane beer and a tobacco extract, which was given upon the advice of the Wapare in Kasanda on the southern end of Lake Jipe, could be cured.

/173 cont./

233 [561] [857] Small livestock and donkeys are tended by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock heeds the whistle or call of the herdsmen. To what extent this is the case is best demonstrated when Masai flee with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, [231] [178] which rages across the steppe in a mad chase. In former times the herdsmen quite generally used dogs. The dogs did not serve so much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by hamming to the herdsmen.

231 [362] [272] /174/ As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particularly nourishing. The blood for this is drawn off the living cattle and goats in the following manner: A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by it and breathing is not affected. Then a man [311] [316] shoots an arrow (Fig. 78) with a bulb-shaped, thick tip (ol hawi), from which projects a male-shaped sharp piece of sheet iron six to eight millimeters long and equally wide, into the swollen vein, whereupon the blood squirts out in a stream and is caught in a gourd bottle (ol bugut). The bleeding is stopped by a simple untying of the strap after the operation is finished. From a strong bull or ox approximately four to five liters of blood are drawn at one time, from a cow only half as much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been fettered; goats and sheep are suffocated by having their mouths and noses held shut. Cows are never slaughtered, not even when they are too old to be used for breeding. 231 Livestock that has died is eaten. As soon as the animal is dead, one 242 561 removes the skin from the neck, severs the neck veins, and catches the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

/188 cont./

752 have been grasped with the fingernails and pulled forward.

To the surgeon's department belongs first of all the extraction of teeth. This is done by three different methods. To remove the lower middle incisors, which among children is done for the first time at an early age and is then repeated after the change of teeth, one sticks the thin iron blade of an ax between the teeth and levers them out while tapping moderately hard laterally several times with a stick against the blade. The other front teeth are taken out only when they are already quite loose. One ties a string of cattle tendon around the crown of the tooth and a fist-sized stone at the other end of it. When this is done, the operator, for a very loose tooth, simply lets the stone fall, or, with one resting more firmly, throws it down. To remove a molar, one places a little stick almost finger-thick and approximately 20 centimeters long, with its lower end, notched swallowtail-like, against the tooth, and, to be sure, from inside, at right angles to the dental arch and then directs several vigorous blows against the free end of the stick. An assistant holds the patient's head. Tooth operations, with the exception of the ritual ones of course, are very rare. Among 100 men between the ages of 20 and 30 the author found two who each had a tooth gap. One had had a molar knocked out in the manner just described, the other had lost a front tooth through being butted by a head of cattle.

757 Bloodletting and cupping, on the other hand, are very common, especially for rheumatic pains and headache. To let blood from a vein on the head or at the extremities, /189/ the blood in a skin vein, in a forehead vein on the head, is first blocked by a leather strap placed around the neck or around the limb above the cupping place. Then the surgeon places himself in front of the patient, the bloodletting arrow (cf. Fig. 78) against the bow, aims, holding the arrow point only five to ten centimeters away from the cupping place, and shoots into the swollen vein. To stop the bleeding, the aforementioned strap is merely loosened. For cupping on the back, chest, and belly, not the arrow but the razor is used. With it incisions a centimeter long are made in the skin, which has been drawn up roll-like with two fingers. These are arranged in horizontal rows, each of which numbers 15 to 20 cuts. It is by no

class name, and is allied with the next (or previous) group, the first being the right hand grade and the other being the left hand grade. After several years the junior warriors go through another ceremony and become full warriors. Their total period of warrior duty may be about 15 years. The warriors are distinguished by their hair style and spear.

The hair style involves a complicated plaiting of the hair with some combination of cords, pieces of hide or gut, bark, or sticks all liberally plastered with sheep or cow fat and red ochre. Elliott (1948) has detailed the methods and materials used and variations in style between areas.

The warriors' spear is often over five feet long. It has a long,narrow,double-edged blade, an equally long but round and painted tail, and between them a very short wooden hand grip carving on a shaft. Warriors also carry a flat, double-bladed long knife or short sword called a *simi*. These useful weapons are carried at the waist in a red leather sheath. Originally the metal weapons were produced by metal-working tribes. They now come from England and the first thing a warrior does after buying a spear or simi is to file off the brand name. When in ceremonial dress or at war the

• 94 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with designs including the warrior's age grade and clan.

54 74 Originally during the period of warriorhood the moiwani were not expected to do any work except fight. They lived in a separate village, called a 71 74 74 ranzilla, and were generally taken care of by the unmarried girls of the tribe. Discipline was reported to have been extremely good. The warriors had older advisors who they obeyed.

2.19 2.19 3.00 9.0 Butchers were hunted to obtain feathers for headdresses, buffalo and giraffe for shields, and lion for the highly prized mane. Traditionally the manes were expected to bleed his speed on a lion. The dramatic decline lion hunts are famous (Simon, 1962). At present warfare and lion hunting are illegal. The abolition results in a large body of young men with absolutely 77 77 54 74 2.19 74 nothing to do for a period of up to 15 years of what could be the most energetic period of their lives. 2.19 They lead the livestock out, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the moiwani than they did

[illegible] Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of single beads, beaded bracelets, and wire loops around their [illegible]neck, ankle and ankles. Both men and women pierce and stretch their ear lobes. The women wear large ear hoopies through them and the men use them to carry small containers or other articles about the size of a 35 mm film canister.

[illegible] Spears, clubs, and knobkerries and shields are [illegible]carried by the men. Elders often carry a long staff instead of a spear. Cooking utensils are simple, wooden consisting of a few pots and pans. Bedding consists of hides, with sometimes a blanket. The goods mentioned [illegible]above are always present. When moving from one place to another a pack saddle to load which consists of two large (two by three feet) flat rounded pieces made of sticks bound and laced by leather thongs. These are used above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, [illegible]antelopes, cooking utensils, and other kit are placed on [illegible]the donkey's back between these. Trade goods are purchased or traded from small Bukusu around the edge of the area or more recently from itinerant traders who [illegible]visit the larger and more accessible areas on foot.

CHAPTER 10

Masai Herds and Mara Lions

1

THE Masai have won respect by their contempt for civilization and all that it has offered them. For half a century Europeans have been tempting them with all the material bribes, indeed even non-material ones, for which every Bantu and Nilotic people is avid. There is scarcely an African of the fat lands who would not sell his soul for a school certificate. The Masai have rejected school certificates with a proud and lofty disdain.

Will a certificate fatten a bullock or swell the belly of a cow? Masai hearts are with their cattle; they desire no finer destiny for a son than to walk in the dust of a larger herd than his father's. The young man who dreams of glory sees fine white bulls and brindled cows and green grass knee-high, he does not see the stone bungalow, the shining motor-car, the well-cut suit, the framed diploma so alluring to his darker fellow-countrymen. He likes to wear his hair in matted pigtails smeared with red ochre and rancid butter, to stand with one foot against the other knee, to eat a compound of bullock's blood and curdled milk, to carry his long spear and to keep his women in their beads and coils and fly-infested mud burrow as his ancestors did—those ancestors whose lion head-dresses and painted shields filled the hearts of lesser breeds with terror, and won the right of conquest over the steppes of eastern Africa from their northern Somali deserts to their southern tsetse bush.

For the Masai have pride, and pride is a quality we recoil from in ourselves and half-admire, half-deplore in others. An Englishman today must stamp with the hob-nail boots of equality upon the little shoots of pride that cannot help but spring up in his heart; but when he sees the fine, free growth of it in others, an envious respect attacks him. For

Cloak. Made of cony skins (*Dendrohyrax validus*); square; tied around the neck. Worn by males only.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Cloak or Cape. Made of cony skins, squared and sewed together. Worn over the shoulders.

Size 4 by 2 feet.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Cloak. Made of cony skins sewed together and simply worn over the shoulders as a protection in cold weather.

Three feet square.
Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Cape. Made of three genetskins sewed together.

Length, 3 feet 3 inches; width, 31 inches.
Wa Chaga tribe; Marbamo district, Mount Kilima-Njaro, East Africa.

War Cloth (Malbóre). For trade with the Masai all cloth must be made up into malbóre. The red stripe in this specimen is too narrow and therefore was rejected in trade.

Masai tribe; Mount Kilima-Njaro, East Africa.
In dress, implements, and in weapons, fashion reigns supreme among these fastidious aborigines. Frequently, an unsuit offered in trade will be rejected with the remark "We have not used that pattern for ten years."

War Cape (Maliti). Made of the feathers of the vulture and the guinea fowl, fastened to a groundwork of genetskin. Worn over the shoulders by Masai warriors.

Masai tribe; Mount Kilima-Njaro, East Africa.

War Cape (Maliti). Made of the feathers of the vulture and guinea fowl, which are fastened to a groundwork of leather. Worn over the shoulders by Masai warriors.

Masai tribe; Mount Kilima-Njaro, East Africa.

Beadwork. Parallel bands of beading on leather, sewn to the cloth as an ornament; usually on the bottom of the cloak.

Mashi tribe; Mount Kilima-Njaro, East Africa.

Arm-rings. Made of the toe nails of the elephant. Here bands or rings cut out so as to pass over the hand. They are of the same width all around, varying from one-fourth to one-twelfth of an inch in thickness.

Dorama, East Africa.

Armlets. Cut from the butt end of a buffalo horn; resembling the widely-gaping mouth of the skeleton of a fish.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Armlet. Beaded leather band, with fringe of iron chain. Worn by women.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Armlet. Beaded leather band. Worn by women.

Wa Chaga tribe; Mount Kilima-Njaro, East Africa.

Kenya

particular relation. The naming ceremony is as follows:—When the child was two 553
about a small rum is chosen and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good-looking and of good character, as otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has reared sons of his
own he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [819]
which is performed with a small, sharp two-edged knife. The reason given for this [818]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [858]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start fetching water they have the lobes of the ears pierced. These
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted cylindrical plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is restricted 242
to milk, fat, and meat, as no crops are grown.

Part II.—Boyhood.

Herding.—As soon as they are considered old enough (and this depends upon the 859
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [816]
is not considered in any way wrong for these boys to begin indulging sexually as soon [817]
as they like, provided that they observe certain restrictions. They may do as they [814]
like with the younger girls in the neighbouring villages, provided, of course, that they
observe the law forbidding sexual intercourse with any member of their own sub-clan, [814]

L. G. R. Lenkey.—*Some Facts on the Mawi of Kenya Colony.*

Killing.—Killing is usually done by women and girls, but uninitiated boys may also milk. Kill is either drunk fresh or is purified by mixing with blood, or is purified alone by leaving for two or three days.

Building.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a member (see Murder), all captured blood, and otherwise damaged cattle are returned immediately afterwards, for to keep them would certainly bring bad luck on the raiders.

Part II.—Miscellaneous Notes.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a live fire made borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks.

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of killing a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man and the murderer's sub-clan and try to arrive cattle in compensation. Usually a fine fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blood and contents are returned next morning (see Building, above).

Zombie.—Among the Mawi zombies are considered "bad." There are zombies in each clan, and the business in gravely a family are handed down from father to son. Young boys of zombies' families are initiated alone, and more initiated go straight to the business of zombiing and may take no part in the life of the ordinary warriors or warriors. Zombies are considered to be considerably lower in the social scale than even the Wandorobo. A Zombie can leave his hunting life and work as a true Mawi if he so chooses, but never a zombi.

If a zombi comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (i.e. the rough fleshy side). Zombies may only marry with zombies' families. No Mawi would dream of marrying or having any kind of sexual intercourse with a zombi's daughter (Wandorobo girls may be married by Mawi, but not vice versa), nor can a zombi marry an ordinary Mawi girl. Zombies make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Masai. Should a Mawi buy the cattle or sheep of a zombi he must dip them in the river before driving them to his kraal.

Whether the front teeth be pointed, or not, other people of both sexes have their teeth pointed[illegible]. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes.

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of others), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and arrow-throwing, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged-end spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsigis, Kisii, Ilony and others of the Nandi division, together with the arrow-throwing; the Kikuyu have obtained them.

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 2 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 200 is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Drums are used for summoning people, but there are no musical instruments or drums.

Beliefs and Ceremonies

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of Enk-ai (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (and also of the kind, but the elegant belief that the soul of a hero or rich man turns into a snake implies some belief in the survival of the soul. This matter needs further investigation; and Merker's statement that each Masai is taught to propitiate his guardian angel and let it be Enk-ai if he has been good is alien to Nilo-Hamitic thought. Enk-ai is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both Enk-ai and Mwitaiyo, the father who died c. 1900; Fox Thomson heard the Il-Kidongo prayers to Enk-ai and Mwitaiyo, and the Nandi war dance after a victory, recorded by Hollis after Mwitaiyo's death, contained also an invocation to Enk-ai and Mwitaiyo. The "minor deity called Oolenkuk," which Thomson thought was an earth-spirit, appears in Krapf's book as the Oolenkuk. The confusion between God and sun. But the Masai word enkenkuk means no more than "that which hangs the earth," and this would seem really to apply to Enk-ai in his role as creator. Enk-ai, god, is grammatically feminine, and his wife Orupe, the moon, is grammatically masculine.

Death and Burial

The bodies of most people are put out by the hyenas, to the east of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The

/71 cont./

For the most part an atmosphere of fullness and harmony lies over the head of the assisted [illegible] of [illegible]. Only on [illegible] in evenings /72/ do the women sometimes dance with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women stand themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The assisted men dance only on festive occasions, but by themselves. The rest of the accompanying song naturally adhere to the life prevailing here.

Otherwise quiet prevails in the family head after darkness has set in. In good weather the people will sit for a while in front of the huts, silently or softly conversing, and go to rest slowly at half o'clock or 9:00.

Even 10-14 years ago, before the island had their huge [illegible]-buildings in two great epidemics, each family had its own family area, on the other hand, almost everywhere several families live together.

In the morning life begins around half o'clock, at which time the women fetch the quite young calves from the compartments and take them to the cows, where they remain for the driving out to pasture. At daybreak the milking commences, for which all the women appear. After it is finished, breakfast, consisting of fresh milk, is taken. Milk, soups, and this porridge are drunk from good bamboo. Foods of greater consistency are put in the mouth with the fingers. Meat is partially cut up with a knife and completely torn into bits with the teeth. The hands are not washed before a meal. Snorting and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the men wishes to eat in the hut, the woman has to leave it beforehand.

serve as fire-lighter (Fig. 16). To make fire, one holds the little board firmly on the ground with both hands, while another bends before it and, twirling on it with the stick, produces the necessary friction. After approximately half a minute, when the fine shavings rubbed off the hard smoke, one throws on some dried cattle-dung. As soon as this starts to glow, one puts brush on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves. With the household equipment also belongs the large leather pouches

(Fig. 18 [illegible] see Fig. 17) of bones, of branch, which in former circumstances landed only on dandyes, but now are also carried by the women on their backs, just like the leather bags of [illegible], [illegible], when they set out to buy vegetables.

[illegible]

[illegible]

Now and then the perpendicular are also replaced by two parallelo pack-holders (*[illegible]*, *[illegible]*), one tied on the other. These have the oval shape of a shield and consist of a wooden frame that is covered with a plaited work of leather thongs or ropes. Otherwise they serve to hold the pack loaded on the donkey and more-closes also on cows. Men are sometimes dressed near-skins into their place. Women are also unknown.

III.

Clans family relationships. — Kinship designations. — Terms of address for relatives.

Since every tribe and every lineage are descended from a tribal ancestor, the tribal and lineage members consider themselves more or less distant relatives. The family, and's one as well as, according, those of the father and of the mother, forms the closer relationship. The child follows the father's family (father-right). Relatives are not responsible for punishable offenses, from, or debts of a relative. Legally they need not support them either in connection with imprisonment or release from captivity; it is such a general custom, however, that probably no one ever evades it.

[illegible] The kinship language is poor in particular kinship designations; most of them are made up of words for father, mother, brother, sister, son, daughter, etc.

Father: *[illegible]*.
Mother: *[illegible]*.
Another wife of the father: *[illegible]*.
Principal wife: *[illegible]*, that is, the great woman, or *[illegible]*, that is, the first in the hut.
Every other wife: *[illegible]*.
Brother (1):

1. Brother and sister copies from the same wife, half brother and half sister from different wives of the same father.

/[illegible]/

[illegible] In a long leather apron reaching to the feet (of goat, of goats), which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before center at a place in the vicinity of a kraal, chosen by the three or four sponsors mentioned each class. The sponsors also consider there or the more time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pass cold water over each other, in order to become numb. The operation, [illegible] which is professionally performed by old men, especially Wondombe, [illegible] is the following /The following paragraph has been omitted from the Latin of the original source/:

[illegible] After the outer skin of the penis has been drawn back and the inner lamella of the foreskin around the back of the glans has been cut around with a knife, the glans lies in an elongated dumb, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an ovale (3).

> 3. The following should also be mentioned here /This one of the features has been omitted from the Latin/: In order to look cut (circumcision), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "[illegible]." The resulting glans prevents the foreskin from sliding forward.

• [illegible] /[illegible]/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs open on the leather apron spread out on the ground. After it, the wounded part [illegible] is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who sticks backwards for this, into his mother's hut and is poured on the ground there. As [illegible] agent to smack the blood is use used. During the circumcision [illegible] until the parents of the boy remain in their hut. So if the latter [illegible] [illegible] because or cries out from the pain, they are punished with shaving

[illegible]

[illegible] place, they wait until that day. Shared pain is half the pain, and a certain coyness is part of good breeding among the lower blood aristocracy. The circumcision of boys and girls on one day takes place at different spots, and, while no female cousins may come near the boys' place, so too no aunts or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the letter's hand has been shaved and her hair tamed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (ul gilo, or gilonah), which her mother has made. The letter is now trying [illegible] to make the pain coming into question match

[illegible]

[illegible]

[illegible]

were drawn from each end of the grip stick to the grip (Pl. 34). The present-day shields, like the former ones, are also made out of buffalo or giraffe skins. For better protection of the hand, the umbo is lined with a round patch of the same skin, and, on top of that, in order to prevent the chafing of the finger knuckles, with a piece of soft sheepskin. The shields now in use, measured with the convexity, are 1-1.10 meters long and half as wide. The escutcheon is painted on the front surface of the shield, whereas the reverse side often -- not always -- bears the lineage coat of arms.

On the march the warrior carries the spear with one hand, the shield in the other one. With arm hanging down, the hand grasps the shield grip so that the smaller diameter of the shield is vertical and the painted surface is turned outward.

The club (si ghada, si ghadi [Pl. 35]) is now made out of one piece, generally out of ordinary hard wood, especially from the tree si ainin and si ellouhenek (1):

1. Dregea rubicunda K. Sch.

only the clubs of the speakers, which serve solely for gesticulating, are made out of ebony wood or chinaberry here. The old clubs /139/ consisted of two parts: the spherical head, into which the sticklike handle was stuck through a central bored-hole. The club does not actually serve as a weapon of war; except for accompanying a speech, it is used almost exclusively in fights and -- to break marrow bones of slaughtered livestock. The present clubs are about 40 centimeters long, their head has a diameter of five to six centimeters. A clublike cudgel (si ebu), especially out of the wood of si gadardar (1),

1. Ochna Mechari Gilg.

often takes the place of the club. The club is worn in the sword belt; it sticks in it as a rule close to the sword, with the head upward.

ornament is bent W-shaped out of liana wood and hung with feathers (ol maráguach [Fig. 40]). Also popular among the warriors in the field and for dancing, but rarer, are the foot-high, pointed warrior caps, ol ugaru, with the designation of the skin added, made out of the skin of wild animals. The cap usually consisted of only one type of skin: more rarely a narrow strip of

/[illegible]/

301

Children, as well as young men and women, wear on the fingers as adornment rings (el [illegible], el [illegible]) made out of four or five coils of copper wire, the ends of which, on the outside, often form flat spirals (Fig. 60). The first ring is stuck on the middle finger of the right hand, the second one on that of the left, the next ones on any other finger. It is not a rarity for a woman to wear rings on all her fingers, including the thumb. Mothers stick on the second toe of the right foot of their babies a /147/ simple ring of copper wire as protective magic against illness, if previously one or two of their children have already died at an early age. Now and then one also finds rings made out of sheet iron, on which the outer part of the circle bears shield-like appendages above and below (Fig. 61). The Masai call them en-ugalger and maintain that they stem from the Wakikuyu. It is certain that they are not made by the Masai.

[751]

[177]

302 Boys and married men frequently shave their heads so that the hair is scarcely more than an inch long. Women shave their heads even more often, and, to be sure, either entirely or only a strip all around. For shaving /Figs. 63-65 and Ill. 48 appear here/ they use

[512]

Fig. 40. Hair style of Indian.

a dampened little piece of down (see which is called at [illegible] (Fig. 40). Before the dressing the hair is moistened with water. The head is usually dressed during the [illegible] white days, the 14th to 20th day of the month, so that on the [illegible] day, of course, the 17th day of the month, the head is not held. The short hair is combed into the down frame of the head. Beard hair and each lashes that grow back into the eye are plucked out with tweezers (Fig. 40 [illegible]). An exception to this is made by the men of the [illegible] lineage, who are not permitted to pluck out their beard hair because otherwise they would lose their power, in particular the supernatural one that enables them to bring and to conjure away rain.

with fresh blood. The juice is so caustic that it burns the skin, and the latter, after two days, may be pulled off, so that the design remains visible as a white scar, which often, however, already after eight to ten days, has become pigmented again. There are no percentages or marks of distinctions when they serve only as beautification and consist of larger or smaller incisions lined up in figures,

which are made with the razor. Nothing is rubbed into the incision. The most common ornamental scars of the men are found on the deltoid muscle (Fig. 70 a, b, c) and have a horseshoe shape (a rub, a rabbit). More rarely among men one sees tattooing on the abdomen (Figure 71 a and b), which, on the other hand, is quite common among women (Fig. 72 a to b). The lyre shape in different variations is the most common. Abdomen tattooing is called ai bigoman.

[illegible]

[illegible] (of [illegible]). The retreating is done by the [illegible] (of [illegible]), a man with the [illegible], double-edged [illegible] (of [illegible]), a woman with the of [illegible]. With a [illegible]-shaped [illegible] the place to which the [illegible] is to be made is drawn up, and then the [illegible] through this is not [illegible] to escape.

Fig. [illegible] Fig. [illegible] Fig. [illegible]

Fig. [illegible] Fig. [illegible] Fig. [illegible]

233 (234) /[illegible]/ The cattle are below (See below) among which one can distinguish a sturdy, short-horned breed and a thinner, long-horned one. One almost never comes across pure representatives of either, however, either, as a result of plunder and cross-breeding, all the types occurring in East Africa are represented among them. The actual bleed cattle (1 gleiche at most) scarcely exceed in size the average East African cattle. The foreign, that is, Indian, cattle especially prized are on account of its considerably larger size, the Grumeh from Bengi and vicinity (1 gleiche of detail), that from Dayuiwent and Uschoua (1 gleiche of mechanic), and further the large-horned 1 gleiche a bleiche, owned after the escape area of Kiwu, west of the area of Ngoro. Among all the animals are relatively small and the yield of milk is consequently little. An exception to this is a low, sturdy breed with short horns, which produces a double quantity of milk and about which the bleed maintain that they are quite pure descendants of the old Wakuafi cattle (1 gleiche of [illegible]). The bleed call descendants [illegible]. Since the calves are not permanently separated from the cows, the women try to avoid the natural resistance at the milking by bringing the calf close to the cow during the milking. They place themselves outside it and hold its head firmly with the knees. The cow licks the calf, believes that it is suckling, /[illegible]/ /Illn. 51 and 52 appear here/ /[illegible]/ and is quiet. If the calf dies, one deceives the cow about its presence by hanging the freshly dried /Fig. 74 appears here/ skin over a stick. The cows are milked twice a day, morning and evening, and each time give about one and a half liters of milk. They are never milked completely; rather one leaves the calves with them afterwards. Until the calf is two months old, it is given the milk from 232 two tits, while the other two are milked. The principles of breeding and selection in general are well known to the bleed (Fig. 74). Male calves that are not to be used for breeding later on are castrated at the age of 14 days (2-gleiche). With a sharpened /Ill. 53 appears here/ piece of sheet iron, such as is used for shoving, a cut is made in the scrotum, then each testicle is grasped with the hand and pulled out, together with the spermatic cords. "So that the wound may heal more quickly," one sticks in a dead fly and ties one of the removed testicles around the left foreleg of the calf upwards on.

(Cont. CONTINUED ON PAGE 217)

/[illegible]/

[illegible] to what lineage or sublineage the owner belongs; from on the small livestock the owner chooses for himself. Probably every lineage has several distinct marks. A glance at history will explain this. In the investigation of the Masai people, accomplished little by little, each of the many bands originally formed a closed whole, which each lineage represented in it adopted a particular mark in order to make its property known. So it was natural that later on different ownership marks existed in connection with one and the same lineage, each according to the affiliation with this or that band. Besides this more that belong only to individual — very wealthy and widely ramified — families are also known, and then they are applied in place of the others, not together with them. The marks on the cattle are the same as those on the donkeys, although the latter bear the ear mark almost exclusively, only very rarely also those on the body. If a band of breeding cattle passes to an owner belonging to another lineage, it is usually given a new mark, and, to be sure, this one then on the right side of the body. Besides the ownership marks, cattle often have still other signs burned in as adornment, especially circles or a sunny-face type of design. A circle around the eye of the calf and, on either side of it, one or two concentric rings on the hind legs are found especially frequently among bulls. In addition to these cut and brand scars, which are therefore supposed to serve in part for identification, in part for beautification purposes, there is also a third type, which arises from operations that are performed with a red-hot iron (Fig. 70) for the curing of swellings on joints and tendons. These lines, usually lattice-shaped, are also found among goats and sheep. On female calves the hoof attachments are often cauterized, so that they can not butt later on. This operation further brings about, in the view of the Masai, an enlargement of the belly, desirable for leather production.

Fig. 70

/100 cent./

752 have been grasped with the fingernails and pulled forward.

To the surgeon's department belongs first of all the extracting of teeth. This is done by three different methods. To remove the lower middle incisors, which among children is done for the first time at an early age and is then repeated after the change of teeth, one sticks the thin one blade of an ax between the teeth and lower gum and while rapping moderately hard breadly several times with a stick against the blade. The other four teeth are taken out only when they are already quite loose. One ties a string of cattle tendon around the crown of the tooth and a fir-wood stone or the other end of it. When this is done, the operator, for a very loose tooth, simply lets the stone fall, or, with one resting more firmly, throws it down. To remove a molar, one places a little stick about finger-thick and approximately 20 centimeters long, with its lower end, notched swallow-tail-like, against the tooth, and, to be sure, from inside, at right angles to the dental arch and then directs several vigorous blows against the free end of the stick. An assistant holds the patient's head. Tooth operations, with the exception of the cruel case of extract, are very rare. Among 200 men between the ages of 20 and 30 the author found two who each had a tooth gap. One had had a molar knocked out in the manner just described, the other had lost a front tooth through being hurled by a head of cattle.

759 Bloodletting and cupping, on the other hand, are very common, especially for rheumatic pains and headache. To let blood from a vein on the head or at the extremities, /100/ the blood in a skin vein, in a forehead vein on the head, is first blocked by a leather strap placed around the neck or around the limb above the cupping

[5-6] place. Then the surgeon places himself in front of the patient, the bloodletting arrow (cf. Fig. 70) against the bow, aims, holding the arrow point only five to ten centimeters away from the cupping place, and shoots into the swollen vein. To stop the bleeding, the aforementioned strap is merely loosened. For cupping on the back,

• [4-2] chest, and belly, not the arrow but the razor is used. With it incisions a centimeter long are made in the skin, which has been drawn up roll-like with two fingers. These are arranged in horizontal rows, each of which numbers 15 to 20 cuts. It is by no

[Figures 1 and 2]

[Figures 3 and 4]

¶ As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then fetched back to the village and has his hair shaved off by his mother, and has new necklets and a new skin dress given to him. This dress must be made of the skins of four goats sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new goat-skin dress and necklets, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A hut was is killed for the patient, who is led on most holed in hut and on plain cold hut, "so that he may get well quickly." Also about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

¶ The Novitiate.—The period of novitiate varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the hair-shaving ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and collecting them in their groups. During the whole novitiate period the novices must not cut their hair at all, nor may they indulge in any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to skin them and stuff them roughly with grass, and tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

[illegible] villages the shields are removed to allow mating to take place with the owner's cows cows. The same method of preventing mating is used with cows, but to a much lesser extent. If a man has several good cows he hangs shields on a few of them at a time in order to see his cows in rotation.

[illegible] *Blood letting.*—Among the Masai, blood is a staple article of diet. It is either drunk hot and fresh, or cooked with bits of fat and cheese into a "blood pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein on the side of the neck swells up under the pressure of the blood. The vein is then punctured by means of a special instrument which may be termed a "blood letting arrow." The blood letting arrow consists of a small sharp shaft into the end of which a small flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The arrow is not shot from a distance, but placed against the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far enough to open the vein. The blood is caught in a gourd and the animal released.

Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

[illegible] *Meat feasts.*—Young men and old elder indulge in frequent meat feasts, meat being a staple article of diet. No men may eat meat inside the villages, so meat-feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near by.

There are certain rules and regulations concerning meat feasts, as follows:—

(1) No man may eat meat that has been touched by a woman.

(2) No Masai man may slaughter cattle himself. In every case a man of the Wanderobo tribe must be called in to kill the animal, and he must be rewarded by being given a part of a feeding.

(3) The neck, stomach and some of the intestines are always given to the women, who may come and fetch them. The breast must be given to the man to whom the slaughtered animal belonged.

(4) During a meat-feast, some or least of the females must sleep in the hut or cave where the meat is, and it is usual for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the brushwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be deserted and left to the hyenas. The breaking of this rule is said to result invariably in the death of the miscreant.

440 D. Gusii Tribe.—*Further Notes on the Meru of Kenya Colony.*

C34 *Baptisal. Sex Life.*—In past times uncircumcised boys were severely punished by the warriors if they had sexual intercourse with a girl of any sort. This is no longer the case, probably because the warriors are afraid of Government interference should they ill-treat the boys.

Should an uncircumcised boy have intercourse with a married woman he may, when he is no longer to be circumcised, fail to find an elder who will sit behind him according to custom and hold him during the operation, but may have to sit unsupported. In an instance which I observed a boy who had so offended was circumcised in the form on payment of a fine of four cows.

The elders who decide when a new circumcision is to take place are those of the Ol-Piron generation to that which is about to be circumcised.

Ol-Piron means a foreskin, and its significance is explained below under separation of generations and age.

Ceremony of Setting-in Girls in the Forest.—The Meru call this ceremony *Enkiboni o Ol-Oong*, which means the tearing of the ear. *Ol-Oong* is the general word for ear or ears and is not confined to the ear used at the ceremony. It must be performed first by the Il-Kolonyoki section. I have not seen it performed.

C31 *Circumcision.*—I will endeavour to describe a circumcision as I saw it. On my arrival a few minutes before sunrise the two boys who were candidates were standing naked and shivering outside one of the village gates. They had previously been completely shaved. An old man poured a little water over each from a pannikin. Ox hides were brought out and each boy sat on one. Each boy was held by an elder sitting behind him. They were just outside the village with their backs to the thorn fence which encircles the village. The operator appeared and circumcised each in turn. He was a Ilkoyo and performed the operation with a dirty-looking razor of a type made in Birmingham or Germany.

As soon as the operation was finished new aprons were put on the boy's feet by the elders; and the elder who was sitting behind him stood up, still holding him, and walked him off backwards through the village gate.

As soon as both boys had been circumcised the operator ended off to repeat the performance at a village near by before the sun was high. I went back into the village with the elders. One of them drew blood from the neck of an ox for one of the candidates. We went into the hut of the mother of one of the candidates, where the boy sat silent on a bed while an elder refreshed ourselves with honey wine. The boy is not allowed to speak for a period after the ceremony, but I have forgotten the length of the period.

A branch of a tree is tied to the front of the boy's mother's hut by leather thongs passed through the wall.

C61 198 *The Initiate.*—Nowadays the novices do not need to remain in this stage till all the other candidates have been circumcised, but shave after a few months. They

[illegible]

[illegible] /

[illegible] channel [illegible] gulch. The channel, a place the height of a man, is located one of the coast of the town of [illegible] [illegible], of [illegible], of [illegible], and a few others and then carried to the valley to the north. A dam (as said) of [illegible] : some of logging serve as an work. The [illegible] [illegible] Fig. [illegible]

[illegible] See p. [illegible]

has the shape of a pattie, the lower end of which is somewhat compressed. Working with it is pounding, not hammering. The rings [illegible] Fig. [illegible] /see footnote 1 above/ consist of two pieces that are joined by a pin mechanism. Their grip area are long, the grasp area short. The most striking object (Fig. [illegible] /see footnote 1 above/) [illegible] the most shape. The bellows [illegible] is [illegible] represented in two forms. The one very widespread in Central Africa, which consists of two conical bags made of dampskin or goatskin (Fig. [illegible]), is the most common. In the lower end of each bag is such a wooden plug, like a stopper, through which projects an iron tube [illegible] bag. In place of the latter there is also often a wooden tube, or for both bags together a forked branch bellowed out like a tube. On the upper, wide end of the bag two sticks are sewed on with small thongs so that they form the opening in a rib. The one using the bellows — usually an old man or a woman — grasps with each hand one of the two bags at the upper end, so that they, opened with the stretching of the bellows by spreading out the hands, let air enter. With the following pressing together of the bellows, by squeezing the sticks together, /Figs. [illegible] upper here/ one presses the air from sliding back again and drives it through the lower iron tube. Both iron tubes open into a clay tube [illegible] lying in the fire. The two bags of the bellows are manipulated in such a way that with the stretching of one the other one is squeezed together at the same time. The other type (Fig. [illegible]) consists of a wooden bowl — covered with skin for durability — upon which is tied, straight, a leather bag that has a round hole on top. In using the bellows, one inserts here the thumb of the right hand and with it stretches the bag upward. With the compressing of the bag the hole is closed with the palm of the hand. Below at the side of the wooden bowl is found the air tube.

Where bowls deposit the ferruginous sand (or [illegible] [illegible] or bowls), that is, sand from which spoon ore forgets, this is /[illegible]/ scraped together in small heaps, cleansed superficially by having water poured over it repeatedly, and then, packed in leather bags, transported to the workshop. In order to extract the iron from the sand, one sprinkles a handful of iron sand into the fire every five minutes and on top of it each time another two to three handfuls of charcoal. When, after about two hours of this procedure, the outer slag is broken, one has a few little pieces of iron sponge of hen's egg size all together, which then ^are being made red-hot repeatedly, can be further worked. For this the individual pieces, under sprinkling with crushed shell shells

326 [illegible]
(364) (ai ingiti) [illegible]
(365)

1. From [illegible] [illegible] and [illegible] [illegible].

are welded together. As this shows, the extraction of iron is very difficult work. Therefore it is still found only rarely today. For the most part one works iron wire, which everywhere in the lowest country in the Senoufo article of barter. Pieces of wire 15 to 20 feet long are twisted together; when they are red-hot, they are sprinkled with small shells and then hammered together. The object ready to shape, for example, a sword blade, is smoothed and polished with volcanic clay and sharpened on a stone. The principal products of the blacksmith are axes, spears, swords, and knives. The two parts of the spear, blade (ni ulai, ulaiba) and socket (ni [illegible], ni [illegible]), a blacksmith with his helpers should make in one day.

(407)

326

305

Fig. [illegible] (3)

326 sword (ni [illegible] blade, ni [illegible] blade) and so (ni [illegible], ni [illegible]) in half a day, the other smaller objects, such as knife (ni [illegible], ni [illegible]), awl (ni [illegible], ni [illegible]), tong for cattle branding (ni [illegible], ni [illegible]), arrow points (ni [illegible], ni [illegible]), razors (ni [illegible], ni [illegible]), tweezers for plucking the beard (ni [illegible], ni [illegible]), in a still shorter time. As payment he receives for a spear two goats or an ox for a sword, a large livestock-bell (ni [illegible], f [illegible]) for an

(435)

/115 cont./

326 ax or ten arrow points, a goat each; for the other things he is paid
[435] with milk. If the orderer furnished the iron wire, only half of the prices named is given as payment for the labor.

From thick brass and copper wire (os sojai, es soja; os sojai ebor, brass wire; os sojai ado, copper wire) the blacksmiths draw thin wire. For this they use as tools the en gauo and the ol gamet. The former is an iron approximately a foot long (Fig. 26a), which is an inch thick in the middle and on both sides often tapers to points. In the center it has a few conical holes of different widths through which the wire is drawn. Not infrequently the en gauo also consists only of a piece of strong sheet iron that /116/ is not pointed at the ends. The ol gamet (Fig. 26b) serves as tongs and has the shape of sugar tongs whose grasping arms are squeezed together by an iron spiral
325 drawn around them. The drawing of small pieces of wire is done by hand, whereby one man grasps the en gauo, the other the tongs. For larger work the former with its two points is wedged into a forked

[413]

Fig. 26b.

wooden block, while the wire already drawn through is fastened to a roller resting on two forked branches. By a slow turning of it the wire drawing then proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The

301 murt), the double-spiral earrings of thick brass wire (es surudiai,
325 surudia) the women and old men, the arm and leg cuffs of iron
462 wire (es segengei, with designation of the part on which they are worn), as well as the tin ear-pendants (ol aimir, el aimer), are made by

/333 cont./

*539 *773 *171 *121 304 The situation is different with regard to the question whether it was perhaps peculiar to the Semites in general to trace circumcision back to a divine command. We know from the Bible that the Israelites trace it back to this. The law according to which the uncircumcised could not be initiated into the secrets of the temple and of science points to a similar view among the Egyptians. I do not know how the Babylonians thought concerning this point. The Mohammedan and Christian peoples, for obvious reasons, can not be considered in answering the present question. Thus there remain only the peoples of interior Africa who are as yet uninfluenced by Islam and Christianity. Now among these I found both among the Masai and among the Semitic Tatoga people and the Semito-Nigritians of the Iraku area the belief that circumcision was ordered for human beings by God.

*539 *773 *171 *121 304 • 413 /334/ Finally, it is still to be pointed out that the tradition of the Masai is also familiar with the use of the reed splinter (os sangasch) for the operation on the human body in prehistoric times. When the angel Ol dirima brought the Masai the ten commandments, it mentioned in the 8th commandment the use of the os sangasch splinter for the cutting of the umbilical cord. Later God prohibits the Masai the use of it, for it is a prohibition when he commands that from now on the ol moronja is to be used for the same purpose. Thus we find here a further parallel between the Israelitish tradition and the tradition of the Masai, for since all of the Israelitish law is made up of commands and prohibitions of God, we may assume that the traditional prohibition of the reed splinter in the myth was based on an expression of divine will (1).

1. The fact that among many Negro peoples too the reed splinter is used to cut the umbilical cord is meaningless for the above question and signifies only that even beyond the wood stage the freshly torn reed splinter was retained as an aseptic instrument for those operations for which it was adequate and suitable. A similar instrument is the tap root of a species of lucerne, pulled out

/footnote 1 continued/ of the ground as needed and carefully freed of its rind, which the Wadschagga use as a uterus probe to induce abortion, as I observed on Kilimandscharo.

The Naming of God

We find a further correspondence in the traditions of the Masai and Israelites in the fact that in the period before the lawgiving, whose epoch is bounded in the Bible by the beginning and end of the works of Moses, God bears a different name than he does afterwards, and that among both peoples the fact of the change of name is handed down by a divine word from this very epoch. 2nd Moses /Exodus/ 6, 2 and 3 reports: "Then God spoke with Moses and said to him: I am Jahve /Yahweh/. I have appeared to Abraham, Isaak /Isaac/, and Jakob /Jacob/ as El Schaddaj (2):

2. I.e., the Almighty.

but I have not revealed myself to them under my name Jahve." And in the tradition of the Masai, the angel Ol dirima speaks at the command of God in the first of the ten commandments: "There is only one God. He has sent me here. Heretofore you called him E'majan (3)

3. = The Forgiving One, the Pardoning One.

or E'magelani (4):

4. = The Almighty.

from now on you shall call him 'Ng ai." It is to be noted especially that the meaning of the names El Schaddaj and E'magelani is the same, the Almighty, and that further E'majan is the Forgiving One, the Pardoning One, an epithet that in the Bible is often applied to God, for example, 2nd Moses /Exodus/ 34, 6, where Jahve calls

FL12 Masai FL12

193*

Plural.	Singular.	English.
Il-ojoñga	Ol-ojoñgani	The fly.
Ing-ojoñga	Eng-ojoñgani	The mosquito.
I-samburumbur	O-samburumburi	The butterfly.
I-sarambalan	E-sarambalani	The bat, swallow, swift.

Examples of other words which belong to this class:

Il-airakuj	Ol-airakuji	The kidney.
Il-ala	Ol-alai	The tooth, tusk.
Ing-atambo	Eng-atamboi	The cloud.
Il-til	Ol-tili	The spark, stain.
In-garara	En-gararai	The quill.
In-giporo	En-giporoi	The scar.
In-guruon	En-guruoni	The ash.
Il-keko	Ol-kekoi	The thorn, thorny place.
Il-kidoñgo	Ol-kidoñgoi	The tail.
Il-kilileñg	Ol-kilileñgi	The sheep's dung.
Il-kiyo	Ol-kiyoi	The tear.
Il-mao	Ol-maoi [1]	The twins.
Il-meneñga	Ol-meneñgani	The corpse, spirit.
I-mōsor	E-mōsori	The egg [2].
I-ñgok	E-ñgoki	The sin [3].
Il-ōkidoñgo	Ol-ōkidoñgoi	The mud.
Il-paek	Ol-paeki	The grain or cob of maize.
Il-pisya	Ol-pisyai	The chain.
I-seghera	O-segherai	The cowry.
I-seghenge	E-seghengei	The iron wire.
I-suut	E-suuti	The dust.
I-senya	O-senyai	The sand.
Il-tian	Ol-tiani	The bamboo.
Il-tuduta	Ol-tudutai	The boil, abscess.

Exceptions.

There are only a few exceptions to this rule. They are as follows:

Il-Maasae	Ol-Maasani	The Masai [4].
Il-Aisungun	Ol-Aisungui	The European [5].
Il-Musungu	Ol-Musungui	

[552]

[1] Ol-maoi means a child who has a twin brother or sister.

[845]

[2] A large egg-shaped cask used for beer, &c., is Ol-mōsori, pl. Il-mōsorin.

[915]

[3] An unlucky child, or a dwarf, is E-ñgoki, pl. I-ñgokin.

[4] The original name of the Masai is said to have been Il-Maa (sing. Ol-Mái), and one even now occasionally hears old people using this word, especially when relating stories of former times. According to tradition the present form dates from the introduction by the Swahili traders of a certain kind of bead called 'Sae or 'Saen (sing. O-Saeni).

[101]
[77]

[5] Europeans, or white people, were formerly called 'L-ōjuju, the hairy ones. This appellation was afterwards changed to 'L-Ailungun, a corruption of the Swahili word Mzungu, which in its turn gave way to the present forms.

[186]

Food.

Amongst the Masai the principal food of the old men, the women, and the children is milk. 262

The warriors alone drive bullocks into the forest, and slaughter them there: at other times they go to the married people's kraals and drink milk, but they never remain for two months together without slaughtering.

Whenever the old men, the women, and the boys are able to do so, they likewise eat meat. They also eat an ox if it dies a natural death [1], or if it is bitten by a snake, or if a beast of prey has killed it.

The Masai elders, however, do not slaughter their cattle without good cause, and a man who is very fond of meat is called a Dorobo. [186]

Whenever a woman gives birth to a child, a bullock is slaughtered, and she is given the fat. [846]

A pregnant woman is not given good food. When she wants meat, she is given bones or lean scraps; and when she wants milk, water is mixed with it. [843]

The Masai are also very fond of blood. They tie a leather ligature round the neck of a beast and pierce a vein with an arrow, the shaft of which has been blocked. When the blood gushes forth, they catch it [415]

[1] The Shiluk and other Nilotic tribes also eat cattle which have died a natural death (Gessi, *Seven Years in the Soudan*, p. 32, &c.). [171] [113]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

262 [915]

Ore 'n-gulye-tōkitin náinosi.

in gourds. Some drink it pure; others mix it with milk [1].

There are a few other things which the Masai eat.

276

Enyaal il-móruak oo 'ñgorōyok ol-kumbau áii shulaki e-makat o ol-kumbau loo-'l-muran. Netii 'l-oook too-'n-gumeshi ol-kumbau oidoñgo, nēji en-gisugi. Netii sii kulikae oook too-'l-mōtio.

Some old men and women chew tobacco mixed with salt and *Ocimum suave*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Ēok sii 'l-muran, kake mēok pôkin. Menyaal ninje 'l-ayok araki 'n-doiye ol-kumbau, nemēok; etoni ake.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco [2].

437 276 [349]

Metumil-Maasae ol-kumbau, amu meiyōlo aatuturu; kake einyañgu too-'l-meek, áinosye eng-orno oo 'n-dare tasati.

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

Memiraki 'l-Maasae 'l-meek in-gīshu supati, 'n-gīshu olupin ake oo nemeata kulle, oo náiba 'l-asho, ninje ake emiraki 'l-meek, oo 'n-dare móruak oo 'n-dasati.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

273

Nēok sii 'l-móruak in-aishi, neinyañgu 'l-maruan o en-joi too-'l-meek.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marua and En-joi.

262

'N-gera ake náinos en-aisho najon. Ṗôki en-dōki nainos il-móruak te-'n-aisho najon il-changaro ake.

It is only the children who like wild honey: old men eat the comb full of grubs [3].

[171] [1] This custom is also common among the Bari (Kaufmann, *Schilderungen*, p. 170).

[556] [178] [2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-chani loo-'ng-onyek, the eye-medicine.

[825] [222] [3] The Masai obtain their honey by following the *Cuculus indicator* bird.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Enyor sii 'n-gera 'l-ñganai-yok naleñg, einos sii 'l-tuñganak kituak, kake mme naleñg.

Nemeinos il-Maasae kulye-tōkitin opa, eton eata 'n-gīshu, kake einosita taata 'n-daiki pōkin oo-'l-meek, anaa 'l-pack, o ol-mishēli, oo 'l-mariko, oo 'n-gulye-daiki e-'n-gop, amu meata 'n-gīshu kumok anaa opa.

Pōki en-dōki nemeinos, e-matwa ake. Nemeinos il-mōtōnyi, oo 'singir[2], oo 'n-giri oo-'l-chañgit.

Children are very fond of various kinds of fruit, which are also eaten by the old people, but the latter do not care for them very much. 262

Formerly the Masai, when they had plenty of cattle, ate no other kind of food, but nowadays they often have to eat savages' food, such as maize, rice, bananas, and cereals, for they no longer own the vast herds which they formerly possessed[1]. [178]

They, however, do not eat everything. They eat neither birds, nor fish, nor the flesh of wild animals.

Il-chañgit.

Menya 'l-Maasae 'l-chañgit opa eton eata 'n-gīshu pōkin; kake eiter kulikae áinos taata 'l-chañgit anaa 'l-Torōbo, amu etumutate 'n-gīshu.

Naa, ten ēari 'l-osōhwani, naa ol-chōni eitauni, p' eitaunye 'l-muran il-loñgoi, neitauni sii 'mōwarak, p' eitái 'n-gidoñgita náidoñgyeki 'mashon. Neitaa sii 'l-oibonok in-gidoñgita naapika 'soito le-'n-aibon.

Wild animals.

The Masai ate the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo. [178]

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicines are ground. The medicine-men also use the horns to put stones in for their prophecies. 237 [914] [915] [787]

[1] It was recently estimated that the Masai in the Naivasha Province own 35,000 head of cattle and 250,000 goats and sheep. Those living in the Ukamba Province and in German East Africa are, however, much poorer, most of their cattle having died of rinderpest some years ago. [233] [184]

[2] The northern Masai sometimes use o-singir (pl. i-singiri) for a fish. The southern invariably use o-singiri (pl. i-singir).

is not considered correct. The smiths marry amongst themselves. 326 564

If a Masai takes in his hand a spear or sword or other thing which a smith has held, he first of all oils his hand for it is considered improper for him to take it in his bare hand. [576]

The smiths are not rich in cattle like other Masai. They have no luck with cattle. If you find one possessing forty head, it is a very large number. [233]

The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of them can speak this language: it is only a certain number of them who know it. [198]

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savages. 323 [439]

Gourds are also bought, or they are collected in the deserted kraals. [415]

One pot can be purchased for a goat. [435]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles[1] by which they can be picked up.

When warriors go to the woods to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles[2]. [482] [237]

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Ekebergia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

844 the hut were gathered together the gossips of the kraal, mingling, so far as space permitted, with calves and goats. [845] A number of large calabashes lay in one corner, and a coarsely-made earthen cooking-pot in another. Fleas in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which pertinaciously would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on the part of the mother, who heard with deep pleasure that her [842] offspring was a boy. Girls are sadly at a discount among the Masai. They would always prefer to have boys, but happily nature sees ahead a little, and takes care that a fair

[133] [342]

MASAI KRAAL, DONYO LONGONOT IN DISTANCE.

supply of girls is provided. As there is no registrar or birth column, I am totally unable to state when our hero first saw 846 the light. That, however, is a small matter. No particular 852 ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly ensconced on her back beneath the bullock's hide which formed the mother's garment.

855 Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew apace. Getting above mother's milk, he was soon exercising his incipient teeth on a huge chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

233 villages the shields are removed to allow mating to take place with the owner's
232 own cows. The same method of preventing mating is used with rams, but to a much lesser extent. If a man has several good rams he keeps shields on a few of them at a time in order to use his rams in rotation.

233 *Blood-letting.*—Among the Masai, blood is a staple article of diet. It is either
[262] drunk hot and fresh, or cooked with bits of fat and meat into a "black-pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein at the side of the neck swells up under the pressure of the blood. The vein is then
[413] punctured by means of a special instrument which may be termed a "blood-letting arrow." The blood-letting arrow consists of a small stocky shaft into the end of which a *small* flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The arrow is not shot from a distance, but *placed against* the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far
[415] enough to open the vein. The blood is caught in a gourd and the animal released.

Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

262 *Meat-feasts.*—Young men and old alike indulge in frequent meat-feasts, meat
527 being a staple article of diet. No men may eat meat inside the villages, so meat-feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near-by.

There are certain rules and regulations concerning meat-feasts, as follows :—

(1) No man may eat meat that has been touched by a woman.

[231] (2) No Masai man may slaughter cattle himself. In every case a man of the
[563] Wandorobo tribe must be called in to kill the animal, and he must be rewarded by being given a part of a foreleg.

(3) The neck, stomach and some of the intestines are always given to the women, who may come and fetch them. The breast must be given to the man to whom the slaughtered animal belonged.

(4) During a meat-feast, some at least of the feasters must sleep in the hut or cave where the meat is, and it is usual for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the brushwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be deserted and left to the hyenas. The breaking of this rule is said to result invariably in the death of the miscreant.

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eng an el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
• [415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
• [415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandorobo, who presumably learned the
potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they
buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[158] healthy people uncooked, as fresh (en gule) or sour (en gule naoto);
boiled milk is food for the sick and as such is usually mixed with
pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is
especially popular because of its very high fat content. Blood of
cattle, sheep, and goats is drunk fresh or eaten in the clotted
[158] state. Milk mixed with fresh or /33/ cooked blood (en liwot) is
greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by
agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is
prepared without adding salt; it is cooked either with various
spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[453] (1).
[263]
[171]

1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

/34 cont./

262 Masai only most reluctantly and infrequently sell cow's milk, for
272 the buyer indeed could in the above-mentioned manner make their cows sick with it. The Masai scorn any kind of game meat, as
[136] well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the sheatfish-like Synodontis occur almost everywhere in larger brooks.

252 The preparation of the principal vegetables is the following:
262 batatas (ol murúngu, el murúnguni -- Ipomoea batatas) are cooked
263 in water with a little steppe salt (e munján), then drained, mashed with a whisk (ol gibere, el giberen), and stirred with fresh milk. The finished dish is called el murúnguni. Unripe bananas (ol marigol, el marigo -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (en gorno) is added. Unripe dried bananas (ol kitauo, el kitauón) are cooked in water, drained, and then stirred with milk and butter. Maize kernels (ol balegi, el baleg) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes ol bombol -- el bombo (Dolichos lablab), en giú --en giñn (with which both Cajanus indicus and Vigna sinensis are designated), furthermore os sigoriol -- es sigorio (Phaseolus vulgaris), ol gámuri -- el gámuri (Phaseolus radiatus). Eleusine coracana (en dabá -- 'n dabán, or en drigá -- 'n drigán or also called en guruma -- 'n guruman) and Sorghum vulgare (ol birirí -- el biriríñ) are cooked to a thick porridge and lightly salted. Dioscorea abessynica (ol geré -- el gerén) and Colocasia antiquorum (which the Masai on Kilimandscharo designate with the Dschagga /Chagga/ word maduma) are cooked in salted water.

Honey (en aischo -- 'n aischi) is eaten unmixed and is also
276 used as an addition to various medicaments. They buy tobacco
[439] (ol gumbau, Nicotiana rustica), which the Masai consume in quantities, from sedentary Negroes, who put it on the market in loose, bast-wrapped packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter.
• [415] For the preparation of this, the tobacco leaves, picked ripe, are tightly packed, tied up with
→

Fig. 4

/34 cont./

276 other leaves, for example, from the banana, and thus left to ferment for several days. Then they are hung up to dry in the shade or in the hut, and, as soon as they are sufficiently dry, they are packed together in the above-mentioned packets. To make the ball tobacco, on the other hand, /35/ one lightly pounds in a mortar the fermented and dried leaves, after they have been sprinkled with water, without, however, thereby breaking up the leaves. The very moist mass is then shaped into balls, which are left to dry in the sun. The [435] Masai pay a goatskin for two packets of about half a pound each or for ten balls. Only the old people use tobacco. The men smoke, sniff, and chew it, while the women content themselves with chewing and sniffing. The tobacco intended for smoking is coarsely cut. The tobacco pipes (Fig. 5) consist of a thin wooden tube about a foot long (os sarian) and a conically shaped clay or [322] [439] wooden bowl (ol mōtí). The latter is carved by the Masai themselves, whereas they buy the clay bowls. For chewing one uses

Fig. 5. (1/2)

• [415] [531]

Fig. 6. (1/2)

the same tobacco and chews it with a little pea-sized piece of natron salt (e magát). To prepare the tobacco for snuff, the smoking tobacco is first cut as fine as possible and then ground to powder with a round stone in a piece of gourd shell. To this one

/35 cont./

276 adds some natron salt and beef fat, frequently also pulverized bark of ol amóra (Ocimum suave Wild.), and mixes the whole by further grinding. Small boxes (en dulet -- 'n duleta) [415] made out of wood, bamboo, cattle [237] or sheep horn, or even out of the [531] horn of the Rhinoceros bicornis, [136] which often are quite attractively carved and decorated with beads, serve as snuffboxes (Fig. 6). They [273] are worn around the neck on thin [415] chains made out of iron wire.

Fig. 7. (1/4) Vessel for the preparation of honey beer.

273 Another luxury, also intended only for married men, is a kind of honey beer (en aiacho namga) (Fig. 7). One dissolves honey in [824] water and adds a piece of the root of the steppe aloe, or sugurói, /36/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1)

1. Named after the resemblance of the fruit to a liver sausage.

(ol darbói -- Kigelia aethiopica), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity [824] of the hearth fire. Before it is drunk, one often puts in a few bunches of leaves from the ol gonjet bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete [439] drunkenness. Other brews, which the sedentary Negroes bring to the Masai for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The Masai do not distinguish these with names, but rather call them generally ol márua.

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] are small, finger-thick, and spindle-shaped ivory sticks 15-20 [237] centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gebé ('n gebén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

415
531

Fig. 9. (1/12.)

512
234
264
262

When the livestock has come home from pasture, it is milked, as in the morning, and after that the evening meal, consisting of fresh milk, is taken.

/37 cont./

415 The household equipment is quite paltry. Except for two or
[356] three earthen pots there is found first of all a number of gourd bottles (Fig. 9) of various sizes: for milking, the ol ódi, el odio; for storing milk, the ol buguri, el bugurta and the larger e mala, 'malasin; for making butter, the en diagologol; and for honey beer, the e' mikorokoro. Some have a bulging, others a slender
[531] bottle shape. They often have sewed on them longitudinal strips
[237] of neat's leather, which are trimmed with cowrie shells (2)

2. The shell of the procelain snail, Cypraea moneta, which even today takes the place of money in many parts of Interior Africa; on the Nianza /Nyanza/, for example, 1000 cowries have the value of two rupies, two pesas (at an exchange rate of 1.40 marks) = 2.84 marks.

415 (os sigirai, es sigira). To make these vessels one puts the ripened
322 and externally hardened bottle gourds, the only plant that the Masai grow near their kraals, and, to be sure, on piles of goat and sheep dung, either in water or to dry on the hut roof until /38/ their contents soften, and then removes these by poking and twirling with a brush made out of a neat's tail (ol kidoŋgoi). Later, the
[237] cleaning is done after daily use through rinsing with cattle urine. As the reason for this peculiar "cleaning" the women whose duty this work is say that the vessels rinsed with water soon become foul-smelling and the milk stored in them does not thicken as evenly as with the use of urine, but rather deposits a layer of water. Since, with use, the gourd bottles soon take on a sourish, disgusting odor, they are often perfumed, and, to be sure, through fumigation with twigs of the ol orien acacia, through which the milk too is given a taste pleasant to the Masai. /Figs. 10 and 11 appear here./

415 The Masai buy wooden bowls (eṅ giré, 'ṅ giran) (Fig. 10),
[439] out of which one eats, from sedentary tribes, while they themselves make the honey pots (ol ílul, el ululi) (Fig. 11). On each
[237] of the two openings of a wooden tube approximately a foot long

/38 cont./

415

Fig. 10. 1/12

[237]
352

cover and /39/ ties it with a thong (eng ene, ng enda) to the finished container. Smaller and larger pouches (ol bene, el benea) of neat's leather serve for storing solid foods. In every hut one also finds round, four-legged wooden stools 2-3 feet high (Fig. 12)

/39 cont./

412 goat or sheep. Other shapes consist of such a piece of a thin tree
[237] trunk, which bears on its lower end a wreath of branches, or also
of a wooden handle on whose lower end, in slits placed crosswise,
[326] sit two short cross-sticks. The blacksmiths make ax and knife.
372 A little board (en dauale) /40/ of soft wood and a twirling stick
[824] (ol birón, el birondo) of hard wood (1)

1. Especially from the ol nanbóli (Ficus Sycomorus) and ol dessegon (Pluchea Dioscoridis).

serve as fire-lighter (Fig. 16). To make fire, one holds the little board firmly on the ground with both hands, while another kneels before it and, twirling on it with the stick, produces the necessary
[237] friction. After approximately half a minute, when the fine shavings rubbed off the board smoke, one shoves on some dried cattle-dung. As soon as this starts to glow, one puts brush on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves.
415 With the household equipment also belong the large leather pouches
482

372 ←

415 →

Fig. 16. (1/10). Fig. 17.

415 (Fig. 16 /sic; see Fig. 17/) (ol benne, el bennia), which in
482 former times were loaded only on donkeys, but now are also carried by the women on their backs, just like the leather bags (e mogage, mogageni), when they set out to buy vegetables.

/40 cont./

415 Now and then the receptacles are also replaced by two pouchlike
492 pack-holders (ol deretal, el derēta), one tied on the other. These
[283] have the oval shape of a shield and consist of a wooden frame that
is covered with a plaited work of leather thongs or ropes. Other-
wise they serve to hold the pack loaded on the donkey and some-
285 times also on oxen. Mats are unknown; dressed neat-skins take
237 their place. Mortars are also unknown.
412

III.

000 Closer family relationships. -- Kinship designations. -- Terms of address for relatives.

602 Since every tribe and every lineage are descended from a
[613] tribal ancestor, the tribal and lineage members consider themselves
[614] more or less distant relatives. The family, one's own as well as,
ascending, those of the father and of the mother, forms the closer
[611] relationship. The child follows the father's family (father right).
[672] Relatives are not responsible for punishable offenses, fines, or debts
of a relative. Legally they need not support them either in con-
nection with impoverishment or release from captivity; it is such
a general custom, however, that probably no one ever evades it.

601 /41/ The Masai language is poor in particular kinship desig-
nations; most of them are made up of words for father, mother,
brother, sister, son, daughter, etc.

Father: baba.

Mother: jējo.

Another wife of the father: eng afhji e jējo.

Principal wife: e' ṅgorojoni kitok, that is, the great woman, or en altero eng an, that is, the first in the kraal.

Every other wife: e' ṅgorojoni.

Brother (1):

1. Brother and sister come from the same wife, half brother and half sister from different wives of the same father.

[Warrior Kraal]

701 /85 cont./ Under a shade tree with thick
361 foliage a spot about 20 to 25 square meters in size is cleared and en-
342 closed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three
701 meters. On the side opposite the
342 entrance opening is the common
35 sleeping place of the ol gibet companions; between this and the door, the hearth: beside the door the space for firewood.

• [415] Close beside the sleeping
[237] place hangs the stomach or
[276] bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol ōōni).

Fig. 18.

a) Sleeping place. b) Drinking bag.
c) Pole for meat.
d) Hearth. e) Firewood.
f) Entrance.

[251] In the vicinity of the hearth the meat supply, is hung on sticks (ol
701 alele). In the vicinity of the warrior hut the serving boys build them-
342 selves their own, considerably smaller one. One calls kraal or hut eng adji ol bul. Each ol gibet receives a longitudinal half of the
701 slaughtered head of cattle, from which, however, it immediately
262 gives back the pieces intended for cooking for the common meals
264 of the day. /86/ The picked-out fat is cooked together with this
[252] meat, and to the whole are added extracts or decoctions from roots
[276] and barks (especially from ol getalassua (1),

1. Myrica kilimandscharica Engl.

ol giloriti (2),

2. Acacia abyssinica.

/171 cont./

233 Manamata on the southern end of Lake Jipe, could be cured.
232 Grazing cattle do not also eat the caterpillars, but first blow them away; thus, on the march, one should drive them slowly through a region infested with these caterpillars, so the blowing away is possible for them.

The Masai designate as em bujangat a cattle sickness that most probably is pulmonary anthrax, caused by the inhalation of dust containing anthrax spores. As a remedy they give the cattle a leaf extract of ol gitelegi mixed with a little milk.

Volvulus (e manjit) is treated by a vigorous blowing of air into the anus. One applies for this a wooden tube (ol gidoñ), which [415] otherwise is used to store the ostrich feathers of the warriors' head ornaments. It is regarded as a symptom of volvulus when the sick animal, without showing any desire to eat, often lies down and rolls about.

With the en dara sickness of the cattle the sick animal is said to emit often a strong carrion-odor; the lymph glands are swollen, the belly is distended. As the cause of the sickness popular belief names a large snake that has contaminated the pasture grass. A cure is not known; experiments, however, have shown us that in the first stages of the sickness a laxative (a bottle of salad oil or sour native beer would be given as such) brings speedy recovery.

/172/ The e' eñgatin sickness, also called eñ gutuke on janit, is recognized by the fact that balls of gnu hair are found in the stomachs of the stricken animals. The only symptom of the sickness, which, however, it has in common with many others, is the refusal of fodder. The people believe concerning the cause of the sickness that the neat ate the grass, contaminated with uterine blood and hair, from a spot where a gnu dropped young.

For the eñg ea om benek of the cattle the Masai give the sick animal the strongly laxative extract from the pounded leaves and fruits of ol gebarnja (Combretum spec.) to drink. As the cause of the sickness they assume that the animal ate the grass on which a buffalo cow dropped her calf. According to their statements, mucus flows from the nose of the sick animal, it trembles over its whole body, and the dung has a ponceau-red coloring.

/173 cont./

233 [561] [857] Small livestock and donkeys are tended by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock heeds the whistle or call of the herdsmen. To what extent this is the case is best demonstrated when Masai flee with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, which rages across the steppe in a mad chase. In former times the herdsmen quite generally used dogs. The dogs did not serve so much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by hastening to the herdsmen.

[231] [198]

231 [262] [272] /174/ As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particularly nourishing. The blood for this is drawn off the living cattle and goats in the following manner: A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by it and breathing is not affected. Then a man shoots an arrow (Fig. 76) with a bulb-shaped, thick tip (ol horet), from which projects a seale-shaped sharp piece of sheet iron six to eight millimeters long and equally wide, into the swollen vein, whereupon the blood squirts out in a stream and is caught in a gourd bottle (ol buguri). The bleeding is stopped by a simple untying of the strap after the operation is finished. From a strong bull or ox approximately four to five liters of blood are drawn at one time, from a cow only half as much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been fettered; goats and sheep are suffocated by having their mouths and noses held shut. Cows are never slaughtered, not even when they are too old to be used for breeding.

[411] [415]

231 262 561 Livestock that has died is eaten. As soon as the animal is dead, one removes the skin from the neck, severs the neck veins, and catches the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

/198 cont./

846 757 roots and leaves of e'mĕtá (Malesma indicum Wettst.). To both is ascribed the effect of promoting the recovery of the birth organs. This is further assisted by putting on a leather body belt (en gitádi, n̄ gitadin) 20 centimeters wide. As a means for strengthening and for increasing the milk secretion, one gives the nursing woman a root decoction of ol asasiai (Osyris tenuifolia Engl.) mixed with fat.

853 During the first weeks of life the newborn child, which, incidentally, is often put at the breast soon after birth, is given, besides the mother's milk, a great deal of liquid butter, which during the first eight days even wholly replaces the former in case the child refuses the breast. Later such a child is given /199/ cow's milk as a substitute [415] for mother's milk, and, to be sure, from a nursing bottle (em bugurí eń gerai [Fig. 80]), which consists of a hollowed-out bottle gourd, over whose upper, open end, as a sucking stopper, is turned a screw of leather pierced at the tip. During the sucking the mother is usually seated, while the child lies horizontally on her lap or squats beside her on the ground. More rarely the woman stands and holds the baby on her arm in a sitting position; even more rarely mother and child further lie side by side on the ground. The suckling period, during which the mother is called en domononi, lasts about two years. Its end as a rule is conditioned by the onset of a new pregnancy, in that the woman nurses a male baby up to the third month of pregnancy, a female one up to the fourth or 862 fifth month. Weaning, for which superstitious considerations are of no importance, comes to pass either in that one removes the baby from the mother, takes it to another hut nearby, or [853] [415] the mother makes the breast distasteful to it by rubbing her nipples with the bitter juice of the os suguroi aloe. A premature drying-up of the 853 mother's milk is explained by the woman's physical constitution. The woman seeks to

Fig. 80. (1/6)

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogǒm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

[272] [237] [415] [824] [539]

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

751 People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up [177] inside a hyaena. The administration frowns on this [178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 <u>Foods</u> Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho 234 (maize meal), milk, meat, and occasionally blood. The 462 cows and sometimes goats are milked by the women and little 234 girls. The milk is collected in large calabashes. These 415 [531] calabashes, ochre colored and sometimes ornately [386] decorated with beads, are almost as much a symbol of the [291] Masai as the ochre blankets or cloaks, moran spears and hair styles.

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic, somewhat smoky-sweet taste that may stay with one for several days.

443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

262 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some- 415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned 492 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on 443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

233

One distinguishes between kraals for the married (eng an el
621 moruak) and such for the warriors (ol manjata). In the former live
361 the married men (ol moruo, el moruak) with their families, in the latter the warriors (ol morani, el moran) with their mothers and the half-grown, uncircumcised girls /27/ (en dito, n doje). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moruo kraals. A dense thorn-barricade extended around the entire kraal complex.

595 The married man on the average has five to six wives, wealthy
[556] men have in addition also a few secondary wives to whom they
[736] are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

592 What is not used in her own household in the way of milk, meat, and skins /29/ /Ills. 10 and 11 appear here/ /30/ is her housekeeping money, with which she buys vegetable foods and such household objects as she does not make herself. She is not supervised in this in any way by her husband. It is beneath his dignity to interfere in these affairs.

443
437
[839]

Approximately every three to six days caravans of old women, accompanied by a few old men and laden with maize, bananas, batatas, etc., arrive in the Masai kraals. Then there begins an hours-long haggling and bargaining with the customary market-woman shouting. Each one tries to sell her goods as advantageously as possible, that is, exchange them for just the articles that she needs. Often the caravans come from a distance of four to five days' march and then remain in the kraal for a couple of days before they set out for home.

[Warrior Kraal]

/84 cont./

701 836 As long as the latter stays in the kraal, his girl is obliged to remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him --as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 857 The tending of the livestock falls to the boys. Even at night they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 233 47 [349] [372] Within the ring of huts there is a circular kraal of thorns for /55/ the cattle and near that a narrower one for goats and sheep, while beside almost every hut there is a small lean-to for the young calves and a barricade of branches for the older calves of the individual ones. Thus everyone remains responsible for the barricading of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on account of the lack of milk. Milk is the only food that the Ol moran takes in the kraal, and the lack of it is therefore especially grievous.

701 262 264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable

[273] [276] food, honey beer, and tobacco. The meat meals are always held outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these

701 262 264 574 forest meals (ol bul, e bull) mess companies are formed in every warrior kraal, which are designated sirit' ol bul and which consist of five or six members, each of whom is called os sirit ol bul. Such banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called

000 ol gibet and prepares its own camp. Under a shade tree with thick

704 come across livestock, they call the others by long drawn-out ií
[727] shouts, so that they will round up the booty, which consists only of livestock. While the el aroi engage in hand-to-hand combat with the opponent, the latter's troops, joining together, seek to wrest the

726
782

Ill. 39. Prayer before the battle.

726 booty away from the el dimito again. In connection with this fight-
704 ing there are the most wounded and killed. In order to shorten it and take the livestock quickly to safety, the latter are constantly urged on by the el dimito and pushed toward the steppe, out of the hostile area. The fourth troop, the el kigelóni, seeks to keep the way open for them and, from the front, to disperse the enemy pressing upon the herd. The last division is the os sioki, that is, the cowards, who were afraid to go along with the others, but now, when there is no longer any danger, slink around the herd like animals of prey, in order to steal. The el dimito and el kigelóni strike at them with their clubs, and a great row arises until the arrival of the leaders in the camp.
[727] Then the latter separate a number of cattle from the herd, which is still common property, and have them slaughtered, whereupon
727 every warrior receives a portion of meat. The warriors /98/ must
417 lay out a fence of thorns so that the livestock is safely sheltered in it for the night.

#13 grassland species. Fences have further restricted the
182
#233 movements of the migratory species.
• [417]

The impact of recent land use changes on wildlife in Eastern Masailand can be illustrated by the wild ungulates of the Athi-Kapiti Plains. This Themeda grassland lies immediately south of Nairobi, in Kenya's Eastern Masailand. Fifty years ago, in terms of climate, soil, vegetation, elevation, and animal life, this area was virtually identical with Western Masailand, 60 miles airline to the west. Here, as in Western Masailand, the wildebeests are considered the key ungulate species, and they will serve as an example:

#136 Until about 1927 the wildebeest population spent the wet seasons on the Athi-Kapiti Plains and in dry seasons moved north, east, and south (Kenya Game Dept., 1908-1914, 1920-1921, 1925, 1927; Percival, 1928; Simon, 1962). From the above references and discussions with local residents and game authorities, especially the Hon. M.H. Cowie, Director of the Royal National Parks of Kenya, Mr. S.I. Ellis, Warden of Nairobi National Park, and Captain D.R.P. Zaphiro, Game Warden of Kajiado District, the wildebeest populations and movements in Kenya east of the Mara area, prior to the 1920's appears to have been as follows: There probably were two main populations: one centered on the

561 He may marry when he is a senior warrior. When he becomes
593 an elder he may take his mother (if he wants) and her
591 [582] share of the family cattle (for each wife has a given
[422] share of cattle) and move off to join others in a village
[562] (Fosbrooke, 1948).

561 The unmarried girls of the tribe live in the
836 warrior's manyattas and normally each moran has one
[583] favorite girl who becomes his concubine. They told us
that usually that girl became the warrior's first wife.

621 (c) Villages: Villages consist of a group
of families, often about five but sometimes more or
less. The villages are commonly called bomas or
361 (improperly) manyattas. Each boma consists of an outer
*233 circular thorn fence with a series of gates, one for
• [417] each Masai elder. Within the gates there are a series of
huts. Often around the huts are small thorn fences
in which young livestock are kept. The cattle of the
village are normally herded into the space in the center
of the boma each night for protection from two and
four legged predators, and in the morning they are taken
back out to graze.

595 When a Masai marries, his first wife builds
on the right of his gate, his second on the left,

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 riors to the exclusion of other classes above them. Their status is
701 that of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of conscripts it is wrong to say that military activity is solely their privilege.

[621] Residential segregation is generally connected with the military activity of the initiates. MERKER states that the *manyat* were ordinarly situated in the strategic positions of the country.[146]

561 But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are [262] also forbidden to eat meat "seen by women", and because their mothers and girls reside with them in their village, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[147]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-units are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the [421] full possession of any cattle; the share of their mother's cattle to which they have right remains the property of their fathers until [121] they get married. And to the father goes the best part of the booty which they take from a raid.[148] Since cattle are the primary source [593] of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their *piron*-elders.[149]

[146] The statement is confirmed by HINDE's description *l. c.*, p. 91. He [361] says that the *manyat* were always built free from any kind of cover, "if possible on a plateau overlooking a good water supply", and "commanding many miles of plain".

[147] The initates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their *piron*-elders.

[148] MERKER, *l. c.*, p. 30: "Das Verdienst der zu Kriegern herangewachsenen Söhne besteht in erbeuteten Vieh und fliesst in der Hauptsache zur Herde des Vaters".

[149] Other restrictions such as the prohibition against snuffing and drin- [554] king beer, both privileges of the elders, confirm the general status of inferiority of the initiates with relation to the elders.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

is that they receive no benefit from the cattle of their neighbours. "We get neither meat nor milk," they say; "why, therefore, should we fight for the preservation of your cattle?" With a consummate knowledge of the region, the Masai warriors threaded their way by special pathways, passing Taveta, and crossing the Nyika. Nearing the coast, they stowed themselves away in the bush, while a few of the bravest went forward to spy out the land, knowing, however, full well that the very sight of one of their number was quite sufficient to stampede a hundred Wa-nyika or Wa-digo. Sadi, indeed, told me that on one occasion he actually met some of these spies *in the town of Mombasa at midnight*. This is, I think, doubtful, but it shows what they are considered capable of; and there can be no doubt as to the astonishing hardihood of these scouts. Stories are continually heard to that effect, thus rendering the Masai a terror in the land; and it is a fact that they have even reached Bagamoyo, opposite Zanzibar. 726

The raid was, of course, successful, and our savage friends returned in great glee. On reaching their homes, however, matters had to be squared up, and the spoil divided. So many head of the captured cattle were set apart as the portion of the lybon Mbaratien, who had directed them so well, and whose medicines had been so potent. Then followed a sanguinary scene over the apportionment of the remainder. There was no attempt at a fair division. The braver men and bullies of the party, consulting only their own desires, took possession of such cattle as pleased them, and dared the rest to come and seize them. The understood rule was that if any warrior could hold his own in single combat against all comers for three days, the cattle were his. And thus began the real fighting of the expedition, revealing sickening sights of savage ferocity. There were more warriors killed over the division of the spoil than in the original capturing of it. To kill a man in this manner was considered all fair and above board. Blood feuds were unknown, a man not being considered worth avenging who could not hold his own life safe. If, however, a man was murdered treacherously, the criminal had to pay forty-nine bullocks. Our young warrior, as he was only as yet winning his spurs, had to be content with the honour and glory of the raid, and he had the modesty not to pit himself against abler and more ferocious fighters. It must be remembered that the cattle thus captured did not remain 727 [791] 727 578 [628] 727 [421]

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12

727 the property of the successful warriors. A warrior can have no property, and hence they all become his father's.

[421] The spoil being divided, the party were next able to do full honour to the men lost in the raid—those being considered worthy of all praise "who *rush* into the field, and foremost fighting *fall*;" while men who die ignobly at home are only worthy to be despised and thrown to the vultures. Hence the warriors howled and jumped into the air in the dance, till the dead were duly commemorated.

648 In this manner, Moran saw a good deal of fighting, and soon rose to fame in many a campaign to U-kambani, Galla-land, the Coast region, Sûk, Kavirondo, Elgumi, and Nandi. The two latter tribes proved to be the most difficult to deal with, the one from its great numbers, the other from its fighting powers.

669 Civil war next broke out, and he had to proceed to the assistance of his brethren of Naivasha, who were hard pressed by the Wa-kwafi. In these civil wars, the affair was gone about in a very civilized fashion. Sudden and unexpected attacks were not indulged in. A cause of war was first discovered—probably, as in more civilized countries, merely to keep their hands in or as an outlet for internal unrest. Preliminaries were then settled most amicably, and the stakes arranged. A place was next chosen as the field of battle, and to this all the warriors of the two districts came with their cattle and young women. As the fighting would be protracted, a truce was declared, while kraals were built in the opposing camps. A certain number then proceeded from both sides, and like gladiators in the arena, they closed in furious strife, spurred to deeds of daring by the women on both sides. The Wa-kwafi were the conquerors, and the cattle of the Masai fell into their hands; and following up their advantage, they nearly drove their brethren from the entire region. (Of this war I have already spoken.)

522 186 As a mild relief, and a variation from these serious matters, it was the dearest delight of our swaggering young friend Moran to "draw the badger" in the person of the Swahili porters who might be meekly endeavouring to pass through his country. These he would dub "donkeys," in allusion to their being burden-bearers like those interesting quadrupeds. He could keep the kraal in a roar of delight, as he described how he had frightened this one out of his wits, or spitted another on his spear, or smashed the skull 431 of a third into jelly. The senengè and the beads he re-

/212 cont./
593 already been discussed elsewhere (1).

1. Cf. 2nd Part, II, IV, XX.

All disputes arising in this connection are settled by the head of the family without formal procedure.

• 421 The property rights are little developed. There are no provisions with reference to landed property. The pasture land of the district is the common property of all its inhabitants. The plains are so large that there is more than enough pasture for everyone's herds. Property belongs to a single individual, not to the family jointly.
425 A lost article, if the loser lives in the vicinity and is known, will be returned for a reward (for example, for a spear that has been found, a small goat or a piece of meat will be paid as finder's reward). Otherwise the finder keeps it and it is up to him whether or not he ever returns it. If a stolen article is sold, the buyer becomes the owner, while the person stolen from has to look to the thief for compensation. Even up to 30-40 years ago ivory that was found was heedlessly left lying. Then the Masai learned to appreciate its value from the caravans coming from the coast, and it became customary that, of the two tusks of an elephant that was found, one belongs to the finder, the other belongs to the members of his lineage living in the vicinity and known to the finder. The division among
[439] the latter takes place through the exchange of the tusk for livestock
437 with an ivory buyer. Among themselves the /213/ Masai barter
438 only livestock for livestock. A small cow is paid for with a fat ox
[435] for slaughter. In former times, before the rinderpest, when the people still had huge cattle herds but few donkeys, a donkey cost two small cows, whereas now, since the ratio has changed, it is paid for with five goats. A fat goat or a sheep is bought for a male
439 calf two to three months old. In trade with caravans, etc., people regard as trade articles, besides livestock, especially wire of iron, brass, and copper, glass beads, such as have already been mentioned in the enumeration of the ornaments, and, more recently, here and there, also colored cloth, especially the cotton fabrics known by the Suaheli /Swahili/ names schiti, konguru, and gamti. The Masai

Inheritance.

When the father of a family dies, his eldest son inherits all his property[1], and also the herds and flocks belonging to the childless widows, but not those which are the property of widows who have sons. 428

The sons by each wife inherit the cattle belonging to their mother's family.

If a man dies childless, his brothers inherit his cattle and his half-brothers his wives. It is unlawful for a man's own brothers (i. e. brothers by the same mother) to take his wives. [587]

Should a widow have a son by her late husband's half-brother or by another man, the child is given the cattle which he would otherwise have inherited had his mother's former husband been alive, and he is considered to belong to that family. 587 428 851

If a man dies and leaves a son who is a minor, the property which he inherits is taken care of for him until he grows up[2]. 428 429

It is considered unlawful for a man to inherit the property of his maternal uncle. 428 604

[1] The Masai distribute their herds and flocks amongst their wives during their lifetime, each one being given a certain number to look after and milk. The cattle so distributed are said to belong to the wife's family, and are recognized as the property of her sons, who, however, do not assume ownership until after their father's death. [422]

[2] In a case of this kind, the child does not go to the wars, but marries soon after he is circumcised.

231 181 422

Distribution of the Masai in 1902.

In 1902-03, when settlers were first attracted to British East Africa, in considerable numbers, the Masai roamed unmolested on both sides of the Uganda Railway from Molo to Naivasha and on the South side from Nairobi to Kiu. They had, to a large extent, recovered from the effects of the cattle plague of 1890 and 1891 and were fairly wealthy again. It was estimated in 1904 that they possessed, in the Naivasha Province alone, 35,000 cattle and half-a-million sheep and goats. Their total possessions at that time amounted probably to 50,000 cattle and 600,000 sheep and goats.

361

Nomadic disposition.

The Masai are a nomad race, in so far as they change their residence frequently and without hesitation, and usually spend the cold weather in the valleys and the hot weather in the mountains. For their cattle, also, they are continuously seeking fresh pastures, and a grazing area, once left, remains untouched for a considerable period. A small number of kraals, to which the Masai would return annually, did exist, but these villages were few and far between and frequently uninhabited.

+648 361

Applications by Europeans for land in the Rift Valley.

The absence of fixed habitations and the periodical migrations of the Masai led to the belief that a considerable portion of Masai country was masterless. In particular was this the case in respect of the Rift Valley, an area admirably suited to stock-raising and European settlement. Applications for those areas which were not continuously occupied by the Masai were accordingly made by Europeans, and the attention of the Government was drawn to the question of how far the country could, with safety and justice, be opened to white settlement, without thereby encroaching on the native grazing rights. As was natural, the land most sought after was that adjacent to the Railway Line, and the advisability of the policy of allowing Masai residence near the Railway on land suitable for Europeans was questioned. It was felt that European settlers, to whom the Railway was a necessity, would not be content to see the Masai, to whom it could be of no use whatever, excluding them from its vicinity.

Sir Charles Eliot's Memorandum on Native Rights.

Considerable discussion took place on this question and Sir Charles Eliot wrote a memorandum on the subject of Native Rights in the Naivasha Province on the 7th of September, 1903 to the following effect :—

*648
311
166

Majesty the King, and that, if they were permitted to move, they would be allowed to proceed slowly. After this, the treaty was translated and fully explained to them, and the Masai affixed their marks in the presence of the European officers. The treaty was then sent to Rumuruti to ascertain if Masikonli and such of the old men as were too infirm to attend the meeting at Ngong approved of the terms.

The agreement, as drafted, was submitted to the Secretary of State, who approved of its terms, by telegram, on the 29th of May, and by despatch on the 2nd of June, 1911.

The Masai Move of 1911

The Masai were accordingly informed that the Government had agreed to their moving from the Northern Reserve into an extended Southern Reserve. The move was arranged to proceed along four routes throughout June, July and August. No compulsion of any kind was used, and administrative and veterinary officers were detailed to escort the mobs of cattle across the European farms.

Congestion on the Mau.

One of the routes, which proceeded by Lake Naivasha, went straight into the extended Southern Reserve, and those Masai who travelled by this route soon reached the Loita Plains. The other three routes converged on the top of the Mau into "The Promised Land." The first Masai to arrive on the plateau went right through to their destination, but the succeeding parties, finding the grazing good, remained, erected their kraals, and decided not to push forward into the plains below. Unfortunately, no precautions were taken to induce them to leave the plateau, and there was consequently a great congestion at the commencement of the heavy rains, which usually fall on the Mau towards the end of August and in September. The roads became impassable, and the people and stock suffered from cold and discomfort. They accordingly returned to the European farms lying between Njoro and Elmenteita Stations on the Uganda Railway.

Desire to return north.

In consequence of this check, the Secretary for Native Affairs and the Director of Agriculture were sent, on August 21st, to investigate the situation, and they reported that there was nothing to show that the move was other than temporarily checked. It had, however, considerably affected the views of some of the people, and a desire appeared, more particularly on the part of Legalishu, to return to the north.

Masai returned to Laikipia.

As it was impossible for the Masai to remain on European farms near the Railway for any length of time, the Governor issued directions for these to be sent back to the southern part of Laikipia, and to the land belonging to the East Africa Syndicate, adjacent to the former Northern Masai Reserve. The carrying out of the necessary arrangements were entrusted to Mr. John Ainsworth, Provincial Commissioner, Kisumu, who met the Masai representatives at Elmenteita and Nakuru early in September. Mr. J. K. Hill placed 150,000 acres of Syndicate land at the disposal of the natives, and the move eastwards into this land was completed by September 16th.

Character of the Move.

This check was undoubtedly the result of the Masai having proceeded too quickly. They pressed forward even when asked by European farmers (through whose farms they were passing) to hold back, the farmers being desirous of trying to open up a trade with them. No police measures of any kind were adopted, testifying to the voluntary character of the move. It appears that the Masai did not suffer to any extent by the journey, and the losses reported were those which would naturally take place in large movements of stock.

*648
231
311
166
422

Underestimates of Masai stock.

The move had brought to light one matter of importance; previous calculations of the number of stock possessed by the Northern Masai had been greatly underestimated, and the probable figure was computed at 200,000 cattle and 2,000,000 sheep, a large increase over the original estimate, made in 1911, of 80,000 cattle and 1,500,000 sheep. That such an error should have been made is accounted for by the superstitious opposition of the Masai to the counting of any of their stock.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

614 a woman of his own clan. But in certain cases groups of sub-clans within the clan may inter-marry (as shown on the chart), but when this occcurs certain payments called *enganyit* are made.

The true status of the Laitayok is discussed elsewhere (Sect. 1) their clans are shown on the chart separate from the main body of Masai clans.

423 614 628 One of the most important aspect of the clan system lies in the ownership of waters. It appears that in the old days, when a new country was conquered, each moran, so far as he was able, claimed a water on behalf of his clan. Thus all the Naberera and other Central Masai wells are in clan ownership, as also are the springs round Losogonoi, Kibaya, etc. The senior member of the clan resident on the water is in control, and, in consultation with the other local clansmen, determines the order of watering.

The main practical application of this knowledge is that in effect the users of the water form a council for the settlement of disputes, under the 'chairmanship' of the owner. For example at Landanai a dispute arose as follows:—

A migrating Masai may demand, and must be given, water at any well or spring, when actually on the move, drinking in priority to any local cattle. A moran claimed this privilege at Landanai, the elder who was watering his cattle refused, and a fight ensued. The local users of the water reached one decision in the matter in the absence of the 'owner' of the water; when he heard of this he was furious, called another meeting, and the original decision was reversed.

In other words, when waters are in clan ownership, there is a definite system of settling disputes arising from the use thereof; further, as the clansmen frequently meet on the water, other matters — marriage, debt, etc. — come up for settlement before the tribunal.

The value of these tribunals should not be overstressed, since in many cases waters are not in clan ownership; where water is abundant, [184 178] as in a river or furrow, the water is communal, (*engare loongishu*) : in other areas where recent migration has ousted the original owners, the clan system does not apply.

614 In certain areas clan feeling manifests itself in other ways. For instance at Laitokitok in Kenya the Molelian and Laitayok have separate manyattas, and act independently in certain tribal matters. Near Loliondo it was found to be of great political advantage when the Laitayok were given a headman of their own. In the course of this survey, only one other clan concentration was discovered, namely the Laitayok at Engasumet, where this clan forms two-thirds of the total population. Local government can, therefore, be given a strong clan bias in that area, and in other areas which may be found in future to contain large numbers of a single clan.

614 422 The feeling that the clan owns jointly all cattle in possession of the clansmen manifests itself in numerous ways. For instance, members of the Engidong clan are not supposed to contribute to the cattle taken by deputations to the laibon — himself an Engidong — but may add a present of their own. When blood-money is paid, it is less when the

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

and alien children; the latter frequently come to be regarded as tribesmen by this process. 597

First of all a Masai adopts any child born to his wife by anyone other than himself, including those born prior to marriage: in fact a betrothed girl is frequently left in her father's boma until she bears a child. The child of one's own loins is called *olunoto*, that of another *engera oilaitalak*. No distinction is made between the two, and the latter term is generally used playfully. [192]

If a man has one wife with a number of children, and another who is barren, when the former gives birth to another child, there is a ceremony by which the latter may adopt this child. The adopting mother sits on the after-birth, and pays to the true mother a cow and calf called *nongeya*. She takes over the child as her own ,and it is asserted that by stimulation of the breasts and special food, lactation can be artificially induced, even when the foster-mother has never given birth. The fact that a woman has adopted a child in this manner is seldom referred to afterwards — the child is regarded as though she herself had given birth to it.

In the olden days children were frequently captured in war and adopted into the tribe: such a child is referred to as *ol arnoti lembere*. It was, and still is, not uncommon for a Masai to adopt an alien's child; at times this will occur when the Masai marries the alien's daughter and adopts a younger son; or in time of famine amongst aliens, the Masai may find an abandoned child, or be given one to look after; or he may give some cattle to the alien for the privilege of adopting the child. The use of the word 'purchase' has been deliberately avoided, for neither party looks on the transaction in this light. A son acquired in this manner is called *atabarno*. These last two categories of adoptee can inherit the cattle of their foster-mother's house, whilst their children can inherit the 'gate' like any other Masai. 597 727 597

A peculiar custom of adoption exists amongst the Engidong or laibon's clan. Any Masai, child or adult, can attach himself to a member of the clan, and such person must treat him as a son, giving him cattle, and arranging his circumcision and/or marriage. Such a person is called ol *onito*, as also are the numerous Kikuyu received into the clan. The relationship is terminable at will, the adoptee shaving and departing, but leaving behind everything that he has been given. Though theoretically applicable to the whole clan, such adoptions usually only take place in the laibon's immediate family . 597 184

These notes on adoption are by no means full: they may, however, be sufficient to emphasise that it is a mistake to regard the Masai as being racially pure. If they come in time to accept new ideas as readily as they accept new blood, their rapid advancement would be assured. 144

It is important for a number of reasons to know who holds the purse-strings in a Masai family group, but it is a question to which no definite answer can be given. Rules, where they exist, are seldom followed — in such intimate family matters it is personality that counts. 422 593 [183]

The cattle which have been allocated to a woman in trust for her children are nominally in her control. The elder looks after the animal

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

422 593 husbandry side, deciding which beasts shall be castrated, etc. He may also take bullocks and exchange them for heifers, or sell them at auctions and buy heifers. He is however expected to use his own reserve (*ongishu le boo*) for tax payments, and if he uses his wife's bullock he should later replace it with a heifer. When however the son takes over responsibility for his mother, the tax payable on their hut will be met by a bullock from the mother's herd.

When relations come to beg cattle, if they are clansmen of the husband, he should try to find cattle for them out of his own reserve, but may beg on their behalf from his wives. If a relation of one of his wives comes begging, the request should be met from that wife's herd, but the elder may also help from his own cattle. But wife B is not expected to assist the relations of wife A, and would in fact be very insulted if asked.

In the matter of milk and beer, the wife is in control. The husband should not go into the partitioned-off, private bed-chamber of the wife, where such drinks are kept. If the wife says the milk or beer is finished, the husband should accept her word, but if it is obviously untrue, he [578] will at times look for himself. If he finds any, the wife is in the wrong; if he does not, he himself is: so in either case a quarrel starts.

Concerning cash realised by the sale of bullocks, the husband will grudgingly give it out to his wives for purchase of beads, wire, etc., but one sees no great display of generosity at auctions. When a man pays another's tax — the most frequent occasion on which one sees cash changing hands — the matter is always remembered and set off later, even in the case of a son.

Though these notes are only superficial, certain aspects of them must be regarded as important. In some cases the wives doubtless follow the advice of their husbands concerning the sale of stock, but they do possess rights of their own, on which — if strong-minded — they can insist. Thus if, for example, stock limitation were made compulsory, many an elder would be placed in an awkward position; if he refused to cull his stock, he would be prosecuted, if he arbitrarily sold his wives' beasts, he would have to face their wrath.

000 The introduction of economic schemes should, therefore, be preceded by consideration of their social aspects, so that the co-operation of the right person can be enlisted. It has been mentioned for instance that the women have complete control of the distribution of milk; it would appear, therefore, that the women should be consulted and agree to the establishment of any creamery or ghee manufacturing project, and that they should also directly enjoy its profits.

CONCLUSION.

114 In place of the administrative proposals with which this paper originally concluded, perhaps the writer may be permitted to substitute a few general reflections. These are based on 17 years' experience of purely District Administration in country ranging from the most unspoilt to the most heavily eroded, from the thickest of fly bush to the broadest

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

422 428 Women possess no property save their ornaments. Of these the beads and the necklaces become the property of the daughters, but the wire ornaments are thrown away.

915 916 *Spirit Life.*—My informants declared that the Masai had no belief in a spirit life after death, or in spirits of any kind, but I am not satisfied on this point. For some reason (probably a restriction with a heavy penalty attached) they were unwilling to discuss this subject.

754 *Curses.*—The death-bed curse is considered very terrible, as there is no possible way of escaping its evil effects, for a curse can only be removed by the person who uttered it. A man who has been cursed will use every possible means to have the curse withdrawn immediately lest the utterer of the curse should die. (A curse [915] uttered during life is supposed often to remain inactive until the death of the utterer, and this in itself seems to indicate a belief in some sort of spirit activity.)

PART VIII.—CLANS.

614 The following is a list of the clans and sub-clans among the Masai (it is as nearly complete as possible):—

Main Clan Name.	*Sub-clans.*
No. 1. Laiseer	(1) Laiseer (2) Legetoi (3) Letoya (4) Lukumai (5) Lamothere (6) Libartimaru (7) Loiger.
No. 2. Ndarosiru	(1) Ndarosiru (2) Lanaboguaru.
No. 3. Molelian	(1) Molelian (2) Mbarakineti
No. 4. Magesen	(1) Magesen (2) Lesegu.

PART IX.—CATTLE AND SHEEP.

233 As a pastoral people the Masai have many very interesting customs connected with their flocks, but information on this subject is very hard to obtain, as details of the greatest interest to anthropologists are often not given because they are considered too trifling or too well-known to be worth discussion. A few interesting notes were, however, obtained.

361
428

Each man of property has one or more village gates through which his herds enter and leave the village. His first wife builds her hut on the right (looking inwards) of her husband's gate, the second wife on the left. The third wife will build next to and on the right of the first wife, and the fourth wife next to and on the left of the second wife.

The diagram below (Text-fig. 1) shows a village belonging to two elders, A and B, with the positions of their gates and of their wives' huts in relation thereto.

When a man marries his first wife he hands over to her a portion of his stock, perhaps half, to look after. He hands to his second wife a slightly smaller herd and the first wife may add a few from her portion. The third and fourth wife receive their portions from the first and second wife respectively, and the husband may also

422

contibute a few. The fifth and subsequent wives receive a few cattle from each of the previous wives in order to form a herd.

Inheritance (*En-Daloishi*).—When a woman has a husband alive, and at the same time a son who marries, she allots some cattle to this son, and they then become his property. On the death of the head of the family each wife divides her portion among her sons. If a wife is already dead her eldest son divides her portion among her sons.

428
422

The cattle from the portions on the right side of the gate cannot pass as inheritance to the left side unless there are no sons of the wives on the right, and vice versa. If a man dies without male issue his property goes to the nearest male relations in his sub-clan. If the first wife has no sons her portion is inherited by the sons of the other wives on the right of the gate. A man may bequeath

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

428 a small legacy of a few cattle to anyone he likes, but the bulk of his property must be inherited according to the above rules.

422 562 *Women's Property.*—As a general rule a woman cannot own cattle herself, but holds them in trust for her husband. I have twice come across exceptions to this :—

(a) A woman who had plied the profession of a doctor (*i.e.* native herbalist) and had received cattle in payment.

(b) A woman who had amassed wealth outside and independently of the tribe.

Household utensils such as gourds, hides, and donkey saddles belong to the woman of the house.

175 791 648 634 *Laibons* (Masai, *'L-Oibonok*).—Hollis, pp. 324-330, gives the history of the *Laibons* up to the beginning of the present century. I will therefore briefly summarise their more recent history.

Lenana was made paramount chief of the Masai in Kenya Colony by the Government. He died in 1911. Some people thought that his brother Sendeyo had bewitched him, but little credence need be attached to this opinion. He appointed his small son Seggi to succeed him. As Seggi was a minor, Ngavoya, son of Nellua, first cousin to Lenana, was appointed as regent. Between the years 1912 and 1923 it was the Kenya Government's policy to curtail the powers of the *Laibons*. Seggi grew up a weak and lovable person, who has little authority, and is more often drunk than sober. At one time he was deposed from paramount chieftainship for persistent inebriety, but was subsequently re-appointed to be paramount chief of the Kajiado District only.

His brother, Kimurusi, is *Laibon* of the Purko section. He is a weak character, but vainglorious and boastful. He is very untrustworthy owing to his desire to seem more important than his character warrants him to be.

Ngavoya is now a very old man. He is *Laibon* of the Kaloneyuki section. Sendeyo is *Laibon* of the Loita section. He was deported to Meru in 1922, it having been alleged that he was implicated in the rising of the Il Kitoip age-group of the Purko at the end of 1922. He was allowed to return to Loita in 1926 and still lives there, much loved and respected.

Whereas in Kenya the power of the *Laibons* has been much reduced since Lenana's death, and councils of elders have been created to try and take their place in the government of the tribe, in Tanganyika Territory the authority of the *Laibon* has been upheld and he is regarded as the paramount chief. I believe that the system has worked well. Until recently their *Laibon* was Parit, a son of Lenana. Parit is now dead, and a minor, whose name escapes me, has succeeded him.

In Pl. XIII, *Fig.* 4, is seen a photograph of Seggi holding in his hand the bronze club of his grandfather, Mbatian, and the iron club of his father, Lenana (see Hollis, pp. 329 and 330). Mbatian's bronze club is at present in my possession, but should be returned to one of his descendants at some future date.

233 of cattle to a family (*kikowi*) in 1948 was between 100 and 200 head. There
[171] appears to be no such system as the Nandi *kaptir* or Kipsikis *kimanahan*. (See
[233] above, p. 21.) Milking is done by girls and women into gourds; the calf is allowed to suck, and if it dies the skin, sometimes stuffed with grass and called *ol-kate*, is presented to the cow at each milking. The milk yield is about three pints a day. Cattle are bled in the same way as by the Nandi, with a blocked arrow, *ol-poret*, shot into the jugular vein, and the blood is caught in a gourd. Sheep also are bled. Cattle are branded with marks on the rump or flank which indicate the owner's clan or sub-clan, with sometimes a private mark as well; the ears are also clipped for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick,
232 *en-bokol*. The Masai are said to have effective remedies for diseases of cattle, but their efficacy has never been enough to prevent heavy loss during epidemics of rinderpest and pleuro-pneumonia.

Donkeys

492 The Masai keep large numbers of donkeys (*i-sirkew*, sing. *o-sikiria*) which are used for carrying their goods when they move house (*idar*). Donkeys are marked by slitting the ears in different ways.

The Status of Cattle

422 The status of cattle as regards ownership is uncertain. Merker says that warriors may own cattle; Thomson says they may not, and on such a point the statements of a traveller are open to question. Fosbrooke says that they may.[1] But further investigation of cattle as property, and of their status in the light of ritual value is required.

Inheritance of Cattle

403 There does not seem to be any clear account of the rules which control the division of a man's stock among his sons. The guiding principle is that the eldest son of the senior wife gets the largest share, inheriting not only the cattle given in trust to his mother, but also those which his father had kept for his own use. Inheritance is affected also by the "gate" (*kikowi*) arrangement in the kraal: for cattle may not pass from one side to the other. If a wife on the left side dies without sons, her cattle may not go to a man on the right side so long as there are any sons by other wives on the left side. This subject also needs further investigation.

Grazing and Water Rights

423 Land is not owned by individuals, but by the sub-tribe (*ol-oshe*), and grazing rights are acquired by residence. Water rights are controlled by the clan. In the old days, when the Masai occupied new territory, each warrior, according to tradition, claimed a well, spring, or water-hole on behalf of his clan. Individual rights over water are then ruled out by tradition, and the senior member of a clan living at the water decides, after consultation with other clansmen, the order in which people take their cattle to water. But a Masai when actually on the move with cattle may claim, and must be given, priority over local cattle at any well or spring. Where water is plentiful, however, as in a river, possession is communal.

Division of Labour

592 In a purely pastoral society like that of the Masai the expression "economic
593 unit" has little meaning, but so far as it can be said to exist, it is the family. It must be remembered, however, that the normal practice is for families to be divided between the father's kraal, *enk-ang*, and the warriors' kraal, *o-manyata*, and that the

[1] Fosbrooke, personal communication.

595 /27 cont./
[736] see in their position as secondary wife lasting or temporary maintenance. Each wife has her own hut, in which she lives with one or several small children and manages an independent household. The woman married first is the principal wife (en altero eng an) (1)

1. = the first in the kraal.

and remains such until death: then the woman married next after her steps into this position. The principal wife is supported the [422] best, in that the husband surrenders to her a large part of his cattle for the usufruct and treats her with distinction before the other wives by means of gifts of ornaments and clothing, as well as by better service. /28/ Her eldest son has prerogatives in the right of succession. The principal wife exercises supervision over the other wives and keeps them at the work when they neglect it.

422 The domestic community does not have any common property. As property there comes into consideration first cattle, goats, [554] sheep, and donkeys. The size of the herd is the gauge for the social position of its owner, the father of the family. The cattle [428] handed over by him to each of his wives for care and usufruct remain his own, and only when the wife has a son about ten or twelve years old do they pass, with his consent, into the latter's possession, and sometimes into his ownership. /Ill. 9 appears here./ A presupposition for the latter, however, is that the boy is not needed in the tending of the paternal herds. For as soon [591] as he receives the livestock, he must leave his father's kraal, along with his mother, in order to lay out a small new kraal for himself at a distance of several kilometers. This is supposed to prevent the two herds from coming together, an opportunity which otherwise the son would often enough take advantage of to steal from the father. Hats and household implements, both 422 423 only of slight durability and little value, theoretically also belong to the father of the family, but in practice to those of his [462] wives who use these things. The woman builds the hut, whereby the children or other women help her. What is not used in

000

/30 cont./

592 422 [434] The earnings of the sons who are growing up to become warriors consist of captured livestock and in the main passes into the father's herd. Actual separate goods for the individual members of the family are only clothing and ornaments, for the sons also their weapons, and further for boys the livestock given to them by the father, for youths and warriors the share of the captured cattle which they keep for themselves.

592 593 The family head is the father of the family. If an older man of his family also lives with him or in the same or a closely neighboring kraal, the two share in the office of the head in such a manner that in all decisions people listen to and heed the counsel of the elder one. Legally the head can be deposed by his brothers for mismanagement and incompetence, but this seems to take place only very exceptionally. The head makes the decisions in all family matters. A right to kill and penalize the members does not belong to the father of the family; just as he is not responsible for their debts and misdeeds, neither may he sell or pledge them. The fact that during the famine caused by two cattle epidemics that [731] followed each other in a short time around the year 1890 children [567] [illegible] given due mercy of their relatives does not prove anything to the contrary. When the corpses of many thousands of the starved lay in the steppes and there was no food of any kind for the survivors, no escape remained for them other than to give themselves or their relatives as serfs to such people as could feed them.

593 591 613 Individual members may detach themselves on account of bad treatment. One who detaches himself flees to another of his lineage or to the one from which his mother stems and purchases his admission with a few cattle that he has stolen from his father's herd and taken along. If he found acceptance in the latter, he must return to his own as soon as he becomes a father.

If a girl is expelled, she may freely choose her future abode, irrespective of tribe or lineage. Wherever she finds admittance /31/ she usually remains permanently, in that she marries a member of this lineage. That is, the men and girls taken in remain nonmembers of the lineage, despite their admission, so that they can enter into a legal marriage with members of the lineage concerned.

/60 cont./

551 Third names for girls: Eng or = the sweeper, from a-or, to sweep; Leraij, Ol ginje, Ndebel, after like-named trees; Leschau, from eschau or ehau = to rain through into the house; En goitoi = the way; Batate = the one who fell down (a-batat = to fall; a-dabatate = I have fallen); Mboi, after a similar sounding call with which one calls back the goats and sheep that have strayed from the herd in the pasture; Karau = the thick-boned one.

[103] Names that women received after their marriage are: Eng arus' ai, that is, the wife who comes from the Arusa area, as the Masai call the Gross-Aruscha /Great Arusha/ area at Meruberg /Mt. Meru/, where many Masai found refuge in the famine. En gischoro, after a former great warrior named Ol gischoro; similarly formed En gischon from Ol gischon.

VII.

000 Circumcision of the boys. -- Point in time. -- The circumcision years, festivities at the end of them. -- Day of circumcision. -- Operation. -- Feast. -- Behavior of the circumcised until the healing of the wound. -- Circumcision of the girls. -- Point in time. -- Operation. -- Behavior of the circumcised until the healing of the wound.

881 According to the belief of the Masai, circumcision was introduced
[885] by a command of God. After circumcision boys and girls are regarded as adults. The former are supposed to be circumcised as soon as they are strong enough for participation in a war expedition, that is, at the age of 12 to 16. Sometimes it is somewhat earlier, if the boy is particularly well developed, somewhat later if the father, lacking any other labor force, cannot spare him in the tending of the small livestock. Circumcision takes place latest for poor sons of poor people
[422] or for propertyless orphans. Namely, for the meat feasts held by the circumcised youths each one in turn has to provide a head of cattle; he must therefore either own it himself or have a father who will give
[464] it to him. If he lacks both, the boy first tries to acquire a small stock of cattle by tending herds for the well-to-do, and until then he remains uncircumcised. Such boys are called el oischó n gischu. This word means "herdsman," but signifies that it is a matter of someone who tends the livestock of other people for pay, like the Biblical word "hireling."

among the others usually more spade-shaped (c). The first two
[177] shapes, especially the spoon-shaped one, have in more recent times also been imitated by Negro smiths, and, to be sure, as I /130/ was able to determine in several cases, on the express
[184] order of Masai warriors. While the spear shoe is circular above
• [422] and below as a rule, one also finds such, particularly in the Ol bruggo province, among which these parts have a rectangular diameter and one which notches (Fig. 30) are made as ownership marks of various meanings (1).

1. They may mean: district, ol boror, tribe or lineage, etc., of the owner.

/Figs. 30-32 appear here./

411
482 On the march the spear is carried, either on the right or on the left, in three different ways, among which the warrior alternates according to convenience. 1. With outstretched arm hanging down, the hand grasps the spear shaft at the spear's center of gravity. The spear lies horizontally, the tip /131/ directed forward and slightly outward. 2. The spear is carried in the arm, similar to the position of the "gun in the arm." With thumb, index finger, and middle finger the spear shoe is grasped in the middle, as one

(the G [= Government] on the hind leg is not part of it, but would have been branded on the animal when it came to the fiscal herd.)

233 capturer of the first head of cattle on a war expedition receives as
552 a reward is called Aherí. Other names for cows are: Narok-gonjék, blackeye, En dobiá, brown one, Mge, cream-colored one, Erok-logunja, blackhead, Na-njugi, red one. A male calf dropped by the cow Súdjaro is called Le-Súdjaro, while a female calf is simply given its mother's name.

231 /168/ Cattle, donkeys, and small livestock bear ownership
233 marks. These consist of cuts or brand lines on one or both ears
422 and of lines and curves burned on the left side of the body. The
[613] marks ([Plates 3 and 4] ol mehere, el meheren, if put on the body; ol bonóto, el bonot, if on the ears) on the cattle and donkeys

/168 cont./

231 show to what lineage or sublineage the owner belongs; those on the
233 small livestock the owner chooses for himself. Probably every lineage
• 422 has several distinct marks. A glance at history will explain this.
[613] In the immigration of the Masai people, accomplished little by little,
[17] each of the many bands originally formed a closed whole, which each lineage represented in it adopted a particular mark in order to make its property known. So it was natural that later on different ownership marks existed in connection with one and the same lineage, each according to the affiliation with this or that band. Besides this some that belong only to individual -- very wealthy and widely ramified -- families are also known, and then they are applied in place of the others, not together with them. The marks on the cattle are the same as those on the donkeys, although the latter bear the ear marks almost exclusively, only very rarely also those on the body. If a
[613] head of breeding cattle passes to an owner belonging to another lineage, it is usually given a new mark, and, to be sure, this one
233 then on the right side of the body. Besides the
531 ownership marks, cattle often have still other signs burned in as adornment, especially
[232] circles or a sentry-box type of design. A
[412] circle around the root of the tail and, on
→ either side of it, one or two concentric rings on the hind legs are found especially
233 frequently among bulls. In addition to these
232 cut and brand scars, which are therefore supposed to serve in part for identification, in part for beautification purposes, there is also a third type, which arises from operations that are performed with a red-hot iron (Fig. 75) for the curing of swellings on joints and tendons. These lines, usually lattice-shaped, are also found among goats and sheep. On female calves the horn attachments are often cauterized, so that they can not butt later on. This operation further brings about, in the view of the Masai, an enlargement of the belly, desirable for leather production.

561 He may marry when he is a senior warrior. When he becomes
593 an elder he may take his mother (if he wants) and her
591 share of the family cattle (for each wife has a given
[582] share of cattle) and move off to join others in a village
[422]
[562] (Fosbrooke, 1948).

561 The unmarried girls of the tribe live in the
836 warrior's manyattas and normally each moran has one
[583] favorite girl who becomes his concubine. They told us
that usually that girl became the warrior's first wife.

621 (c) Villages: Villages consist of a group
of families, often about five but sometimes more or
less. The villages are commonly called bomas or
361 (improperly) manyattas. Each boma consists of an outer
#233 circular thorn fence with a series of gates, one for
[417] each Masai elder. Within the gates there are a series of
huts. Often around the huts are small thorn fences
in which young livestock are kept. The cattle of the
village are normally herded into the space in the center
of the boma each night for protection from two and
four legged predators, and in the morning they are taken
back out to graze.

595 When a Masai marries, his first wife builds
on the right of his gate, his second on the left,

2: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

cattle" and "red bulls". HOLLIS,[44] recorded two subdivisions of the Uasin Gishu, "the black striped cattle", and "the red striped cattle", which were, very probably, no other thing than the moieties. 614 634

The Masai *clans*, *ol gilata*, pl. *il gilata* or *en giskomi*, pl. *in giskomi*, are patrilineal and exogamous. Generally, they do not seem to be totemic. However, HOBLEY,[45] and the author of *MS.* No. 48 have recorded the names of a few clan totem. FOX,[46] refers also to the association of snakes with some clans. 614

The true exogamic unit of the Masai seems to be any individed unit, either clan or branch of the clan. A Masai may be adopted into another clan then his original one. The same provision applies even to an alien (Kikuyu, Dorobo). The adoptee, however, never attains the same social status as a full member of the clan. He is free to leave at any time, provided he returns whatever he was presented by his patrons, such as cattle or any other valuable. 614 597 [554]

The relationship between clans and their territorial distribution is not very clear. Analysis would suggest that in the past, clans were territorially separated. At present, there is still a tendency for members of the same clan to live close by to one another and occupy neighbouring encampments. Some sections are almost made up by members of a single clan. Thus, the *Moielian* clan is predominant in Kapiti section; the *Ataysk* clan is predominant in Dalalakotok section. Such facts, however, seem to be the exception. Usually clans are represented at a time in many different sections "There is no rule", writes HOBLEY,[47] "governing the distribution of the various *gilat* (clans); often members of as many as three *gilat* will be found in one *morn engang* (elders' village) or a *moran manyat* (warriors' village)". 614 361

Water and cattle are generally clan possession. When new water sources are discovered, they are claimed on behalf of the clan. All clan members who live in the neighbourhood are entitled to make use of them. A foreigner may also be allowed to water his cattle there. If disputes arise, they are settled by the council of clan-members on the spot. As a matter of fact, these water sources are the centre of ordinary social life, as FOSBROOKE[48] writes: "The 614 623 312 423

614 623 312 423 clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[*] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 677 685 The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[*] LEAKEY, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[*] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 3-fifth to the murdered's father", and the rest is distributed among the other elders of the clan.[*] This is also confirmed by the notes of MAGUIRE on the penal code of the Masai.[*]

614 One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 649 175 The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one laibon was recognised as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

614 a woman of his own clan. But in certain cases groups of sub-clans within the clan may inter-marry (as shown on the chart), but when this occurs certain payments called *engwapit* are made.

The true status of the Laitayok is discussed elsewhere (Sect. 1) their clans are shown on the chart separate from the main body of Masai clans.

●423 One of the most important aspect of the clan system lies in the ownership of waters. It appears that in the old days, when a new country
614 was conquered, each moran, so far as he was able, claimed a water on
628 behalf of his clan. Thus all the Naberera and other Central Masai wells are in clan ownership, as also are the springs round Longonot, Kibaya, etc. The senior member of the clan resident on the water is in control, and, in consultation with the other local clansmen, determines the order of watering.

The main practical application of this knowledge is that in effect the users of the water form a council for the settlement of disputes, under the 'chairmanship' of the owner. For example at Landanai a dispute arose as follows:—

A migrating Masai may demand, and must be given, water at any well or spring, when actually on the move, drinking in priority to any local cattle. A moran claimed this privilege at Landanai, the elder who was watering his cattle refused, and a fight ensued. The local users of the water reached one decision in the matter in the absence of the 'owner' of the water; when he heard of this he was furious, called another meeting, and the original decision was reversed.

In other words, when waters are in clan ownership, there is a definite system of settling disputes arising from the use thereof; further, as the clansmen frequently meet on the water, other matters — marriage, debt, etc. — come up for settlement before the tribunal.

The value of these tribunals should not be overstressed, since in
[134 178] many cases waters are not in clan ownership; where water is abundant, as in a *river or furrow*, the water is communal, (*engare loongishu*): in other areas where recent migration has ousted the original owners, the clan system does not apply.

614 In certain areas clan feeling manifests itself in other ways. For instance at Loitokitok in Kenya the Moleliau and Laitayok have separate manyattas, and act independently in certain tribal matters. Near Loliondo it was found to be of great political advantage when the Laitayok were given a headman of their own. In the course of this survey, only one other clan concentration was discovered, namely the Laitayok at Engaumet, where this clan forms two-thirds of the total population. Local government can, therefore, be given a strong clan bias in that area, and in other areas which may be found in future to contain large numbers of a single clan.

614 The feeling that the clan owns jointly all cattle in possession of the
420 clansmen manifests itself in numerous ways. For instance, members of the Engidong clan are not supposed to contribute to the cattle taken by deputations to the laibon — himself an Engidong — but may add a
copy present of their own. When blood-money is paid, it is less when the

233 of cattle to a family (*kishomi*) in 1948 was between 100 and 200 head. There
[171] appears to be no such system as the Nandi *kaptic* or Kipsikis *kimwatakos*. (See
above, p. 21.) Milking is done by girls and women into gourds; the calf is allowed
[234] to suck, and if it dies the skin, sometimes stuffed with grass and called *el-kata*, is
presented to the cow at each milking. The milk yield is about three pints a day.
Cattle are bled in the same way as by the Nandi, with a blocked arrow, *el-gwed*,
shot into the jugular vein, and the blood is caught in a gourd. Sheep also are bled.
Cattle are branded with marks on the rump or flank which indicate the owner's
clan or sub-clan, with sometimes a private mark as well; the ears are also clipped
for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick,
232 *en-bolisi*. The Masai are said to have effective remedies for diseases of cattle, but
their efficacy has never been enough to prevent heavy loss during epidemics of
rinderpest and pleuro-pneumonia.

Donkeys

422 The Masai keep large numbers of donkeys (*i-ankaw*, sing. *o-ankiwa*) which are
used for carrying their goods when they move home (*ildar*). Donkeys are marked by
slitting the ears in different ways.

The Status of Cattle

422 The status of cattle as regards ownership is uncertain. Merker says that warriors
may own cattle; Thomson says they may not, and on such a point the statements
of a traveller are open to question. Fosbrooke says that they may.* But further
investigation of cattle as property, and of their status in the light of ritual value is
required.

Inheritance of Cattle

428 There does not seem to be any clear account of the rules which control the
division of a man's stock among his sons. The guiding principle is that the eldest
son of the senior wife gets the largest share, inheriting not only the cattle given
in trust to his mother, but also those which his father had kept for his own use.
Inheritance is affected also by the "gate" (*kishomi*) arrangement in the kraal: for
cattle may not pass from one side to the other. If a wife on the left side dies with-
out sons, her cattle may not go to a man on the right side so long as there are
any sons by other wives on the left side. This subject also needs further investigation.

Grazing and Water Rights

423 Land is not owned by individuals, but by the sub-tribe (*el-oshe*), and grazing
rights are acquired by residence. Water rights are controlled by the clan. In the
old days, when the Masai occupied new territory, each warrior, according to tradition,
claimed a well, spring, or water-hole on behalf of his clan. Individual rights over
water are thus ruled out by tradition, and the senior member of a clan living at
the water decides, after consultation with other clansmen, the order in which people
take their cattle to water. But a Masai when actually on the move with cattle may
claim, and must be given, priority over local cattle at any well or spring. Where
water is plentiful, however, as in a river, possession is communal.

Division of Labour

592 In a purely pastoral society like that of the Masai the expression "economic
593 unit" has little meaning, but so far as it can be said to exist, it is the family. It
must be remembered, however, that the normal practice is for families to be divided
between the father's kraal, *enk-ay*, and the warriors' kraal, *e-manyata*, and that the

595 /27 cont./
[734] on in their position as secondary wife lasting or temporary maintenance. Each wife has her own hut, in which she lives with one or several small children and manages an independent household. The woman married first is the principal wife (en alkem eng ai) (1)

1. = the first in the kraal.

and remains such until death; then the woman married next after
[822] her steps into this position. The principal wife is supported the best, in that the husband surrenders to her a large part of his cattle for the usufruct and treats her with distinction before the other wives by means of gifts of ornaments and clothing, as well as by better service. /28/ Her eldest son has prerogatives in the right of succession. The principal wife exercises supervision over the other wives and keeps them at the work when they neglect it.

422 The domestic community does not have any common property.
As property there comes into consideration first cattle, goats,
[554] sheep, and donkeys. The size of the herd is the gauge for the social position of its owner, the father of the family. The cattle
[428] handed over by him to each of his wives for care and usufruct remain his own, and only when the wife has a son about ten or twelve years old do they pass, with his consent, into the latter's possession, and sometimes into his ownership. /III. 9 appears here./ A presupposition for the latter, however, is that the boy is not needed in the tending of the paternal herds. For as soon
[591] as he receives the livestock, he must leave his father's kraal, along with his mother, in order to lay out a small new kraal for himself at a distance of several kilometers. This is supposed to prevent the two herds from coming together, an opportunity which otherwise the son would often enough take advantage of
422 to steal from the father. Hats and household implements, both
• 423 only of slight durability and little value, theoretically also belong to the father of the family, but in practice to those of his
[462] wives who use these things. The woman builds the hut, whereby the children or other women help her. What is not used in

[Warrior Kraal]

/83 cont./

XI.

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organization: the speaker, his badge and tasks; leaders; benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- Warr permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

621 701 [361] [634] In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ol manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a [342] large sleeping place for a warrior, and usually, at the other end of the [513] hut, a small one for one of the mothers. The huts of those who are [423] staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

621 701 462 [351] [356] The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as *ol-apu*, *ol-le-'ng-apu*, etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property. A boy or man can go to his father's or paternal uncle's kraal and take or demand a goat or milk, and in all probability nothing would be said, but if it were done repeatedly the father or uncle would express dissatisfaction or refuse altogether. A man may also go to his sister's husband or wife's brother (*ol-aputani*) and take anything, but an account is kept and the debt has to be returned. If a man is poor it is customary for him to live with one of his brothers-in-law (*ol-aputani*) and help to look after the stock. He is fed for his trouble, and as payment receives one out of every pair of twin goats born.

First cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is no nearer than *ol-le-'sitwa* (or *en-e-'sitwa*). Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always contingent on the two parties not belonging to the same sub-clan.[1] The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. No warrior may select as his

[1] The Masai are divided into five clans: *Il-Aiser*, *Il-Molgwana*, *Il-Molesen*, *Il-Molelyan*, and *Il-Tarturu*. Each clan is again divided into sub-clans, *e.g.*, the *Il-Aiser* contain amongst others the following: *Ia-gidelgi* and *Il-Parkeneti*. No man belonging to the *Ia-gidelgi* sub-clan may take as wife the daughter of a man of the same sub-clan, but he may marry the daughter of the *Il-Parkeneti* or he may marry a daughter of the *Il-Molgwana*, *Il-Molesen*, *Il-Molelyan*, or *Il-Tarturu* clans. Members of the various sub-clans are usually to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same lawful marital relations in all the sub-districts as he has in his own home sub-district.

In his recent book, *The Ethnology of the A-Kamba and other East African Tribes* (Cambridge, 1910), Hobley states (p. 121) that the restrictions governing marriage amongst the Masai are far from simple, and he gives a number of complicated instances. As a matter of fact the rules are quite simple if one remembers (i) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (ii) that no man may marry a nearer relation than a third cousin, and then only if the terms of address used are *ol-le-'sitwa* and *en-e-'sitwa*.

/212 cont./

593 already been discussed elsewhere (1).

1. Cf. 2nd Part, II, IV, XX.

All disputes arising in this connection are settled by the head of the family without formal procedure.

421 The property rights are little developed. There are no provisions with reference to landed property. The pasture land of the district is the common property of all its inhabitants. The plains are so large that there is more than enough pasture for everyone's herds. Property belongs to a single individual, not to the family jointly.

• 425 A lost article, if the loser lives in the vicinity and is known, will be returned for a reward (for example, for a spear that has been found, a small goat or a piece of meat will be paid as finder's reward). Otherwise the finder keeps it and it is up to him whether or not he ever returns it. If a stolen article is sold, the buyer becomes the owner, while the person stolen from has to look to the thief for compensation. Even up to 30-40 years ago ivory that was found was heedlessly left lying. Then the Masai learned to appreciate its value from the caravans coming from the coast, and it became customary that, of the two tusks of an elephant that was found, one belongs to the finder, the other belongs to the members of his lineage living in the vicinity and known to the finder. The division among

[439] the latter takes place through the exchange of the tusk for livestock

437 with an ivory buyer. Among themselves the /213/ Masai barter

438 only livestock for livestock. A small cow is paid for with a fat ox

[435] for slaughter. In former times, before the rinderpest, when the people still had huge cattle herds but few donkeys, a donkey cost two small cows, whereas now, since the ratio has changed, it is paid for with five goats. A fat goat or a sheep is bought for a male

439 calf two to three months old. In trade with caravans, etc., people regard as trade articles, besides livestock, especially wire of iron, brass, and copper, glass beads, such as have already been mentioned in the enumeration of the ornaments, and, more recently, here and there, also colored cloth, especially the cotton fabrics known by the Suaheli /Swahili/ names schiti, konguru, and gamti. The Masai

/213 cont./

439 designate the first one as en aŋga en djore, i.e., war cloth, because the warriors like to dress up in it; the konguru they call en aŋga bos, i.e., colored cloth, and the gamti, ol garascha.

43 The demand for the individual trade articles varies a great deal. At times the need for one kind is so well supplied that it is either not taken at all or far below its value. Correspondingly, the value of another kind often rises disproportionately high through the heightened demand. A lengthy discussion back and forth precedes every exchange or purchase transaction. As a sign of a settlement, the seller spits [452] on the object. The exchange follows at once; only trustworthy acquaintances are granted credit. The risk in the matter, for cattle, does not pass to the buyer until the day after purchase, otherwise immediately.

426 686 The creditor proceeds against a nonpaying debtor first by complaint, and if this remains without effect, he helps himself to his property by force, provided that the debtor can comfortably pay, but for some reason, usually one that has nothing to do with the debt, does not want to pay: a road that is also often taken as the only one. Only upon his impoverishment will the creditor become earnestly pressing. [672] Then, if the debtor is incapable of paying, his brothers and half brothers, or if such are not present or are unavailable, his paternal cousins must pay. Whether the former or the latter pay, the repayment of the debt is always arranged so that no great economic hardship arises for the one paying. The creditor, if he does not voluntarily [626] enter upon the arrangement, is forced into it by the public opinion, which is often expressed in violence. An inconsiderate collection of an outstanding debt actually never occurs; rather, the creditor almost always displays an extraordinary kind-heartedness and forbearance about it and often lets himself be put off for years or waits patiently until the debtor or his heir is in such a good position that the repayment of the debt will be easy for them. It may also happen that the [581] creditor takes a daughter of the debtor and, after she has reached marriageable age in the service of one of his wives, marries her. [583] Since the creditor, even in this case, /214/ pays his father-in-law the bride price, the debt remains standing in full and the kinship [672] bond only makes its repayment more certain. The heir is liable for

/214 cont./

426 the full debts, not only up to the amount of the inherited property.
686 If a warrantor is liable for the debt, he must satisfy the creditor if
[672] the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a stool with the legs upward, or he wraps the legs of the stool or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries.
[784] The ol momai is a divine judgment. A person who does not grant the request expressed in the ol momai sign will soon be punished by 'Ng ai through death or illness. A person who did not grant the
[783] request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men whom he entertains with a head of cattle and honey beer. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

675 Loans or contracts are unknown. The creditor does not have
426 a right to the corpse of the debtor; neither debts nor misdeeds or
764 crimes committed by the deceased have an influence on the nature of his burial.

628 No distinction is made between murder and manslaughter, but
682 there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge
[593] carried out by boys and warriors or only by warriors. Any brother
[672] of the one murdered is first of all entitled to carry out the blood revenge and, further, any man belonging to the family. Blood

Inheritance.

When the father of a family dies, his eldest son inherits all his property[1], and also the herds and flocks belonging to the childless widows, but not those which are the property of widows who have sons. 428

The sons by each wife inherit the cattle belonging to their mother's family.

If a man dies childless, his brothers inherit his cattle and his half-brothers his wives. It is unlawful for a man's own brothers (i. e. brothers by the same mother) to take his wives. [587]

Should a widow have a son by her late husband's half-brother or by another man, the child is given the cattle which he would otherwise have inherited had his mother's former husband been alive, and he is considered to belong to that family. 587 428 851

If a man dies and leaves a son who is a minor, the property which he inherits is taken care of for him until he grows up[2]. 428 429

It is considered unlawful for a man to inherit the property of his maternal uncle. 428 604

[1] The Masai distribute their herds and flocks amongst their wives during their lifetime, each one being given a certain number to look after and milk. The cattle so distributed are said to belong to the wife's family, and are recognized as the property of her sons, who, however, do not assume ownership until after their father's death. [422]

[2] In a case of this kind, the child does not go to the wars, but marries soon after he is circumcised.

The villages, *eng ang*, pl. *ing angite*, is the minimal territorial unit. Villages are distributed within the minor sections. JOHNSTON,[15] had already noted that "they generally range within certain districts". A village is the residence of one or more elders with his or their wives and cattle. A man after his marriage does not live in the same village as his father, unless the latter has become senile and unable to cater for himself. 621 [591] [888]

The internal structure of the village is based on the gatesystem. This consists in a proper arrangement of the house on the sides of the village's gates. The village consists of a large yard enclosed by a thorny fence with gates opening at opposite sides. The house are built on the right and left sides of each gate, every gate with its houses belonging to a single elder. The usual arrangement is as follows: the first house on the gate's right is the dwelling of the owner's first wife; the first house on the left side is that of his second wife; the second house on the right side is that of his third wife; and the same alternating order is followed if marries more wives. The central yard is reserved for cattle. The elder's cattle are allotted to each of his wives according to her rank in the house. Cattle in possession of one side of the gate cannot be inherited by the other side. When inheritance takes place it is with great care that one tries to avoid cattle interchange.[16] The gate system, observes FOSBROOKE,[17] is an ideal, and "a symmetrically arranged gate is seldom found in practice". When people move in search of better grassland, the village is not destroyed, but simply evacuated. During the owner's absence the houses may be occupied by other temporary tenants. At the reverse migration the owner comes back to his old village if this is not irreparably decayed, and it is agreed by custom that any foreigner who might have found shelter in the house must vacate the place to the original owner. 621 361 [428] [166]

Another type of Masai village should be mentioned here. It is 621

687 remain before the gates, every ox, cow and calf of the murderer is forfeit.

(*d*) If the deceased has very few relatives, they sometimes try to surprise the murderer's cattle when out grazing. They hastily run them to their own kraal and brand one or two with their own brand.[1] If they succeed in branding a few before the relatives of the murderer arrive, the latter may only remove the bell-oxen and herd-leaders. All the remainder are forfeit.

Until the matter of the murder [illegible]n settled in any of
[582] the above ways, or by the ki[illegible] the murderer without trial, no man from the murderer's kraal may be married to a girl from the kraal of the deceased and vice versa. This applies to all Masai, irrespective of clans or families. Donkeys, sheep and goats are never included in the property forfeited except by mutual agreement.

En-gooki: Parricide or Fratricide

[428] If a son kills his father, or a brother his brother, he forfeits all rights to inheritance. The property goes to his brothers, their wives or (if he is an only son) to his uncles. If married, he forfeits his wife and children. If unmarried, he will never be given a Masai woman to wed. He is generally hunted from his kraal, and with his mother (to whom the blame for his crime also attaches) becomes an outcast.

Murder by unusual means—such as poisoning—is a very rare offence. The penalty would be the same as in murder by any ordinary method. Should the poisoned individual
[683] recover, the penalty would be the same as in the case of a serious injury. In some of the very few cases of murder by poisoning that have occurred in the past the culprit has been executed by the Masai.

Homicide is dealt with according to the gravity of the matter, the degree of provocation caused and the element of chance or accident existing. It is generally settled by the payment of twenty cattle and nine cattle, or forty cattle and nine cattle.

[1] For a comprehensive illustrated list of Masai cattle-brands, see *Die Masai* by M. Merker. (Berlin, 1910. Dietrich Reimer.)

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ceived from the traders, he, of course, did not keep himself, but divided among his sweethearts of the kraal. 431

And so with war and women, life passed in happy fashion. His demeanour was serious, and his expression ferocious, though he acquired an aristocratic *hauteur* truly striking. He showed curiosity in a dignified manner. He rarely indulged in vulgar laughter, and smiling was hardly possible on a face which could only be called fiendish. 157

He passed some twenty years in this manner. At last his father was found to be on the point of death, and he was sent for. Shortly after his arrival, the old man succumbed. 764 885

[301] [304] [593]

BAB GEBANKEPUS, MARRIED WOMAN.

It was not thought necessary to recognize this common-place occurrence in any way whatever, and therefore Moran lost no time in picking up the corpse and throwing it outside the kraal. Next morning, he smiled grimly as on going out, he kicked aside some freshly-picked bones, and glanced at some disgusting hyenas slinking away, in company with mendacious storks, while vultures flapped greedily overhead.

He was now sole heir of his father's herds, for his younger brothers did not receive a single head of cattle, though they had captured in their raids considerable numbers of them. Any they might secure now, however, would be their own property. Moran decidedly preferred the free and easy life of the warrior's kraal, but, alas! he discovered, not that he was 428 815 885

B. Junior Warriorhood. — circumcision — subdivisions of age — formation of Maayaitas — relations between junior and senior warriors — promotion (Unoto).

881 As in the case of other ceremonies, it is not the details but the wider
304 significance of the operation which claims our attention. The first most
561 important point is that circumcision is the visible sign of admittance to full membership of the tribe, and that anyone desirous of becoming a "Masai" must be operated upon. After admittance there are many ceremonies of promotion but it is not essential that every member of the tribe should attend; it is essential, however, that he should be circumcised. Prior to circumcision no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to. Further, the moran, whose perquisite the mature girls are, deny the youths' access to their girls. Consequently circumcision and its attendant ceremonies admit the youths to a full sex life.

881 Hollis states that circumcision usually takes place between the ages
304 of 13 and 17, though orphans and the children of poor parents frequently
● 428 wait until they are twenty. My own observations would indicate that
561 16 or 17 is the lower limit, except in the case of youths whose fathers have died, who want to be in a position to inherit. The existence of this latter custom, circumcision to permit inheritance, is a good example of the meaning of the ceremony. If it has not been performed, the youth whose father dies cannot inherit; the cattle, wives, etc., must all be taken over by a paternal uncle as guardian pending the circumcision of the eldest male child. But if permission can be obtained for his circumcision a youth of ten or twelve can assume control of a boma, to the exclusion of all other relatives. In other words, as stated above, circumcision is the mark of full membership of the tribe.

561 When the initiation of a new age has been sanctioned circumcision takes place singly or in groups of two or three in the father's boma. The ceremony is usually performed during or at the end of the rains, a time of plenty amongst the Masai, and is suspended during the dry season. Four successive years are taken up with the circumcision of an age, and it is natural that those circumcised in one season possess a marked feeling of affinity towards one another. This shows itself in the possession of a group name for each batch, the same names being employed from generation to generation. They are, for the first batch, il *Changen opirr* or il *Kiperen*, followed by il *Paringotuolong*, il *Kirimbot* and finally il *Tareto*. The above refers to a right hand age; a left hand age, being fewer in number, possesses only the three last-mentioned divisions.

561 When all of one age have been circumcised they divide themselves
621 into companies (isirit) each of which forms a warrior village or barracks (*emuyetta*). In Tanganyika the maayaitas are usually formed on a territorial or sectional basis, e.g. Engasumet, Olnolog, Mferegi (areas) or Selei, Purku, etc. (sections), though Whitehouse describes a ceremony whereby the warriors, presumably [illegible] one area, divide themselves up, frequently on a clan basis.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

When blood-money is paid, it is less when the

payment is between clansmen. The logical extension of this principle is that when cattle are due from one member of the clan they may be taken from any of his clansmen. This is in fact the rule for payment of compensation amongst the Masai, though the offender and his near relatives naturally pay more. In the one case of blood money in which details were obtained, members of sub-clans other than that of the murderer contributed, and it is, therefore, safe to calculate that clan responsibility and cohesion applies to the whole clan in greater degree than it does to the sub-clans. 614 672 681

B. **Family matters — the boma system — the 'gates' — polygamy — marriage statistics — number of cattle to each gate — relations in law — travelling — adoption — economic.**

Briefly, the Masai live in groups of families, usually three, four or five together, in a village comprising a ring of huts, built immediately inside a circular fence, which thus forms an enclosure for the cattle. Such villages are usually built some two or three miles, frequently more, from the water which the cattle use, so that it is unusual to find more than two or three bomas in close proximity. Frequently a boma is a mile or more from its nearest neighbour. In the village each family possesses a separate gate, *enguhome*, round which its members are grouped. 361 621

It is difficult to define a typical family or 'gate' unit. The ideal of a Masai elder is to possess half a dozen wives with many children, ranged on either side of his gate. As he marries he places the first on the right of the gate, and the second on the left; when a third wife comes in she builds her hut immediately to the right of the gate, and the fourth immediately to the left, the earlier wives moving round accordingly. Each wife on arrival is given a number of cattle, which are hers to hold in trust for her children. She is also given, for tending, some of the unallocated cattle which the elder holds in reserve for future marriages; such cattle are termed *enginhu e boo*. Those living to the right and the left of the gate form two distinct groups, *indaloishin*, and for the purpose of inheritance, should a wife on the left die without male issue, her cattle will be inherited by the senior male on the left of the gate; they may in no circumstances be taken by an heir on the right so long as there is a son on the left to inherit. 592 595 [428]

When the sons are circumcised, they nominally take over the guardianship of their mother, and of the cattle allocated to her. In the old days they would move off with her to the manyatta, warriors' village, but this is less frequent now. As they approach elderhood, however, in polygamous families the sons at times claim their patrimony and move off with their mothers, to form a separate gate in some other boma. More frequently they show little desire for this responsibility, and spend the greater part of their period of warriorhood wandering round the countryside, or living in meat-camps in the bush (*ol pul*). Once they become elders it is exceptional for a son to continue to live with his father, except when the latter has reached senility. 591 592 [36]

This is the theory of the gate system, but in practice it varies very considerably from the ideal. Polygamy (see below) is limited by the 595

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

death taking place within the village. This means that as soon as a young or middle-aged person shows any signs of approaching death, he (or she) is hastily carried out into the bush outside the village and left to die there. 763

Should the death of a young or middle-aged person occur within the village the body must be carried out and thrown into the bush. The proper person to perform this last service is a son of the deceased, but if no son is available the body must be moved by a stranger (usually a member of the Wandorobo tribe, who is always willing to perform this work), and the fee for doing so is a heifer. The village must be moved as soon as possible after such an occurrence, but otherwise there is no purification ceremony. 764 [243]

Burial of Old People.—Only an old man, or a woman past child-bearing, is allowed to die peacefully in a hut in the village, and the body is then buried in the following way:—As soon as death occurs a ram or bullock is slaughtered and the fat used to anoint the body and clothes (sewn skins) of the individual. All ornaments are removed, and the burying-place is then prepared as follows: A spot in the bush not far from the village is selected and cleared and a hollow square of rough logs is then built up. This structure is usually about four feet square and three feet high. On the ground inside the structure the deceased's sleeping-skin is placed, and on it the body is laid (with the knees sufficiently bent to fit the space). Men are placed lying on their right sides, women on their left. The body is then covered by the various skin dresses owned by the deceased and left, no attempt being made to cover over the top of the structure with wood or earth in order to protect the body from scavenging animals. 766

About a month after the burial has taken place the village must be moved, with the exception of the hut in which the death took place. The hut is left to fall into ruin. Meanwhile, until the move takes place, any other occupants of the hut continue to live in it as before. 768

Ceremony at the Burial-place.—On the day that the village is finally abandoned every member of the village must file past the burial-place and the older people stop and drink beer and slaughter an ox there. My informants, however, insist that this is not a sacrifice to the departed spirit as among some other tribes, and as proof pointed out that they did not pour out any beer at the grave or leave any offering of meat. 769

Inheritance.—A man's possessions all pass to his male children, but if they are too young to take charge of them themselves the deceased's own brother, who acts *in loco parentis* (see Widowhood) looks after the property for them. In return for this he is allowed to retain a very small percentage of the stock. 428

A man's personal ornaments are put on his various children about two months after his death, with a certain amount of ceremonial and much beer-drinking. His weapons are kept for his sons until such time as they shall require them.

11: Leakey E-5 (no date) 1930 FL.12 Masai FL.12
Kenya

422 Women possess no property save their ornaments. Of these the beads and the 423 necklaces become the property of the daughters, but the wire ornaments are thrown away.

915 *Spirit Life.*—My informants declared that the Masai had no belief in a spirit life 916 after death, or in spirits of any kind, but I am not satisfied on this point. For some reason (probably a restriction with a heavy penalty attached) they were unwilling to discuss this subject.

754 *Curses.*—The death-bed curse is considered very terrible, as there is no possible way of escaping its evil effects, for a curse can only be removed by the person who uttered it. A man who has been cursed will use every possible means to have the curse withdrawn immediately lest the utterer of the curse should die. (A curse 815 uttered during life is supposed often to remain inactive until the death of the utterer, and this in itself seems to indicate a belief in some sort of spirit activity.)

PART VIII.—CLANS.

614 The following is a list of the clans and sub-clans among the Masai (it is as nearly complete as possible):—

Main Clan Name.	*Sub-clans.*
No. 1. Laimer	(1) Laimer (2) Legatei (3) Letoya (4) Lekumai (5) Lemathare (6) Libartimaru (7) Leigut.
No. 2. Ndarwiru	(1) Ndarwiru (2) Lasalogwaru.
No. 3. Molelian	(1) Molelian (2) Mbarekimati
No. 4. Magawa	(1) Magawa (2) Lawaya.

PART IX.—CATTLE AND SHEEP.

933 As a pastoral people the Masai have many very interesting customs connected with their flocks, but information on this subject is very hard to obtain, as details of the greatest interest to anthropologists are often not given because they are considered too trifling or too well known to be worth discussing. A few interesting notes were, however, obtained.

614 The name of the main group 'Lorobo nongi' is very liable to be confused with that of the sub-class 'Lorobo 'Kidoi; however the former means "the blood-red bullocks and the latter the blood-red cattle."

It is further difficult, if not impossible, to know whether to treat some of the divisions as clans or sub-clans.

The two words used by the Masai are *Ol piron* (the clan) and *Bohidomi* (the sub-clan). But these words are not much help to the enquirer, because the Masai use each to some extent interchangeably.

Hollis, p. 300, speaks of a group of Masai called 'L-Oikop or Il-Lorobon. I have been unable to discover these people. The tribe called Lorobon, which lives to the west of the Masai area, is quite different in language and customs from the Masai, being similar to the Nandi.

[101]

Some clans are associated with certain colours as under :—

'L Aiser of Oosuma Orok (the black colour ?), 'Loighoroni of Amoni Rongai Orok (the thin black snake), Il Dorowere of Amoni Sero (the brown snake), Il Kidolian all snakes.

597 *Adoption.*—The Masai like to adopt children, and even grown men, of other clans and other tribes, who may help them to herd their cattle. Of recent years they have also shown a tendency to adopt Kikuyu cultivators to plant maize for them in the more fertile areas Naivasi Kapsoe and Il Molili, west of the Rift valley.

[56] [58]

An adopted person is called O-Ilaiyo. Having been adopted he is regarded as being a member of the family and clan of his adoption and has nothing to do with his former clan. He may even marry a woman of the sub-clan of his natural father, provided that it is not also the sub-clan of his adoption. But he may not marry or have sexual intercourse with a woman of the sub-clan of his adoption. Accordingly, an adopted Kikuyu may call himself a Masai, and even though he may be unable to speak the Masai language he is not telling a lie according to Masai ideas.

When a man or boy is adopted as a herdsman he is treated by the head of the family as one of his own sons. He is given his herd of cattle and is helped to marry a wife. But if or when he elects to leave his adopted family he must go empty handed as he came, leaving behind him each cattle, wives and children as he may have acquired under adoption.

[554] An adopted man takes an inferior position socially to a well-born Masai. He would not in practice hold any important position in the tribe nor be able to marry a well-born Masai woman.

561 928 *Inheritance. Arrangements of Wives' Huts.*—Before dealing with inheritance it is necessary to explain briefly the arrangement of huts in a village in order that the terms "*right of the gate*" and "*left of the gate*" may be understood.

361
428

Each man of property has one or more village gates through which his herds enter and leave the village. His first wife builds her hut on the right (looking towards) of her husband's gate, the second wife on the left. The third wife will build next to and on the right of the first wife, and the fourth wife next to and on the left of the second wife.

The diagram below (Text-fig. 1) shows a village belonging to two elders, A and B, with the positions of their gates and of their wives' huts in relations thereto.

422
575
428

When a man marries his first wife he hands over to her a portion of his stock, perhaps half, to look after. He hands to his second wife a slightly smaller herd and the first wife may add a few from her portion. The third and fourth wife receive their portions from the first and second wife respectively, and the husband may also

361
428

FIG. 1.

422
575
428

contribute a few. The fifth and subsequent wives receive a few cattle from each of the previous wives in order to form a herd.

428
422

Inheritance (Ele-Dabidik).—When a woman has a husband alive, and at the same time a son who marries, she allots some cattle to this son, and they then become his property. On the death of the head of the family each wife divides her portion among her sons. If a wife is already dead her eldest son divides her portion among her sons.

The cattle from the portions on the right side of the gate cannot pass as inheritance to the left side unless there are no sons of the wives on the right, and vice versa. If a man dies without male issue his property goes to the nearest male relations in his sub-clan. If the first wife has no sons her portion is inherited by the sons of the other wives on the right of the gate. A man may bequeath

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

428 a small legacy of a few cattle to anyone he likes, but the bulk of his property must be inherited according to the above rules.

422 562 *Women's Property.*—As a general rule a woman cannot own cattle herself, but holds them in trust for her husband. I have twice come across exceptions to this :—

(*a*) A woman who had plied the profession of a doctor (*i.e.* native herbalist) and had received cattle in payment.

(*b*) A woman who had amassed wealth outside and independently of the tribe.

Household utensils such as gourds, hides, and donkey saddles belong to the woman of the house.

175 791 648 634 *Laibons* (Masai, *'L-Oibonak*).—Hollis, pp. 324-330, gives the history of the *Laibons* up to the beginning of the present century. I will therefore briefly summarize their more recent history.

Lenana was made paramount chief of the Masai in Kenya Colony by the Government. He died in 1911. Some people thought that his brother Sendeyo had bewitched him, but little credence need be attached to this opinion. He appointed his small son Seggi to succeed him. As Seggi was a minor, Ngaroya, son of Nellian, first cousin to Lenana, was appointed as regent. Between the years 1912 and 1923 it was the Kenya Government's policy to curtail the powers of the *Laibons*. Seggi grew up a weak and lovable person, who has little authority, and is more often drunk than sober. At one time he was deposed from paramount chieftainship for persistent inebriety, but was subsequently re-appointed to be paramount chief of the Kajiado District only.

His brother, Kimurusi, is *Laibon* of the Purko section. He is a weak character, but vainglorious and boastful. He is very untrustworthy owing to his desire to seem more important than his character warrants him to be.

Ngaroya is now a very old man. He is *Laibon* of the Kakonyuki section. Sendeyo is *Laibon* of the Leita section. He was deported to Meru in 1923, it having been alleged that he was implicated in the rising of the Il Kitoip age-group of the Purko at the end of 1922. He was allowed to return to Leita in 1926 and still lives there, much loved and respected.

Whereas in Kenya the power of the *Laibons* has been much reduced since Lenana's death, and councils of elders have been created to try and take their place in the government of the tribe, in Tanganyika Territory the authority of the *Laibon* has been upheld and he is regarded as the paramount chief. I believe that the system has worked well. Until recently their *Laibon* was Parit, a son of Lenana. Parit is now dead, and a minor, whose name escapes me, has succeeded him.

In Pl. XIII. Fig. 1, is [illegible] photographs of illegal [illegible] club of his grandfather, Mbatian, and the iron club of his father, Lenana (see Hollis, pp. 329 and 330). Mbatian's bronze club is at present in my possession, but should be returned to one of his descendants at some future date.

231 of cattle to a family (*kishomi*) in 1948 was between 100 and 200 head. There
[71] appears to be no such system as the Nandi *kapkiy* or Kipsiki *kimasakat*. (See
[231] above, p. 21.) Milking is done by girls and women into gourds; the calf is allowed
to suck, and if it dies the skin, sometimes stuffed with grass and called *el-kata*, is
presented to the cow at each milking. The milk yield is about three pints a day.
Cattle are bled in the same way as by the Nandi, with a blocked arrow, *el-gwet*,
shot into the jugular vein, and the blood is caught in a gourd. Sheep also are bled.
Cattle are branded with marks on the rump or flank which indicate the owner's
clan or sub-clan, with sometimes a private mark as well; the ears are also clipped
for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick,
232 *em-bolosi*. The Masai are said to have effective remedies for diseases of cattle, but
their efficacy has never been enough to prevent heavy loss during epidemics of
rinderpest and pleuro-pneumonia.

Donkeys

232 The Masai keep large numbers of donkeys (*i-sirkon*, sing. *o-sirkiai*) which are
used for carrying their goods when they move home (*ildar*). Donkeys are marked by
slitting the ears in different ways.

The Status of Cattle

233 The status of cattle as regards ownership is uncertain. Merker says that warriors
may own cattle; Thomson says they may not, and on such a point the statements
of a traveller are open to question. Fosbrooke says that they may.* But further
investigation of cattle as property, and of their status in the light of ritual value is
required.

Inheritance of Cattle

234 There does not seem to be any clear account of the rules which control the
division of a man's stock among his sons. The guiding principle is that the eldest
son of the senior wife gets the largest share, inheriting not only the cattle given
in trust to his mother, but also those which his father had kept for his own use.
Inheritance is affected also by the "gate" (*kishomi*) arrangement in the kraal: the
cattle may not pass from one side to the other. If a wife on the left side dies with-
out sons, her cattle may not go to a man on the right side so long as there are
any sons by other wives on the left side. This subject also needs further investigation.

Grazing and Water Rights

235 Land is not owned by individuals, but by the sub-tribe (*el-oshe*), and grazing
rights are acquired by residence. Water rights are controlled by the clan. In the
old days, when the Masai occupied new territory, each warrior, according to tradition,
claimed a well, spring, or water-hole on behalf of his clan. Individual rights over
water are then ruled out by tradition, and the senior member of a clan living at
the water decides, after consultation with other elements, the order in which people
take their cattle to water. But a Masai when actually on the move with cattle may
claim, and must be given, priority over local cattle at any well or spring. Where
water is plentiful, however, as in a river, possession is communal.

Division of Labour

236 In a purely pastoral society like that of the Masai the expression "economic
237 unit" has little meaning, but so far as it can be said to exist, it is the family. It
must be remembered, however, that the normal service is for herdsmen to be divided

* Fosbrooke, personal communication.

[See details of the (Kishomi) arrangement in [illegible] p. 109. — Ashton]

595 /27 cont./
[736] ses in their position as secondary wife lasting or temporary maintenance. Each wife has her own hut, in which she lives with one or several small children and manages an independent household. The woman married first is the principal wife (en ałtero eng ai) (1)

1. = the first in the kraal.

and remains such until death; then the woman married next after her steps into this position. The principal wife is supported the
[422] best, in that the husband surrenders to her a large part of his cattle for the usufruct and treats her with distinction before the other wives by means of gifts of ornaments and clothing, as well as by better service. /28/ Her eldest son has prerogatives in the right of succession. The principal wife exercises supervision over the other wives and keeps them at the work when they neglect it.

The domestic community does not have any common property.
422 As property there comes into consideration first cattle, goats,
[554] sheep, and donkeys. The size of the herd is the gauge for the social position of its owner, the father of the family. The cattle
[428] handed over by him to each of his wives for care and usufruct remain his own, and only when the wife has a son about ten or twelve years old do they pass, with his consent, into the latter's possession, and sometimes into his ownership. /Ill. 9 appears here./ A presupposition for the latter, however, is that the boy
[591] is not needed in the tending of the paternal herds. For as soon as he receives the livestock, he must leave his father's kraal, along with his mother, in order to lay out a small new kraal for himself at a distance of several kilometers. This is supposed to prevent the two heads from coming together, an opportunity which otherwise the son would often enough take advantage of
422 to steal from the father. Huts and household implements, both
423 only of slight durability and little value, theoretically also belong to the father of the family, but in practice to those of his
[462] wives who use these things. The woman builds the hut, whereby the children or other women help her. What is not used in

000

/200/

XX.

000 Death. -- Interment. -- Hereditary succession. -- Last wishes of the dying. -- Sacrifice to ward off impending death. -- Treatment and interment of the corpse. -- Funeral banquet. -- Mourning. -- Burial. -- Burial of Chief Mbatyan. -- Distribution of the inheritance.

763 When a family father feels death approaching, he calls his people, his wives and children, to him, in order to tell them his last wishes. These apply principally to the division of the inheritance and saying [428] further -- probably always without exception -- that the eldest son of the principal wife is to be the successor in the paternal kraal. Following this, the old man, with the words wõu, maitujuko, or õu, maitanaba, i.e., roughly: "come, I want to bless you," turns to the chief heir and gives him advice about keeping the members of the family together and supporting them in case of possible impoverishment, about care for the brothers who are still minors, as well as for the surviving wives and daughters. He admonishes him further to be friendly and gentle toward the members of the family, of the lineage, of the tribe, and toward all Masai in general. He tell him that he is to celebrate the supplication feasts and to pray, and should also hold the relatives to this. He advises him to be thrifty, but warns against miserliness, and finally he presents him with one of his ornaments, as a rule, an armband, in memory of this hour.

The husband squats at the deathbed of a wife in order to hear her last wishes, which consist in her entrusting her children -- likewise present -- to his care.

[782] In the hope of warding off death, the dying one has a black bull slaughtered as an offering to God. His eldest son leads the sacrificial animal out of the kraal, slaughters it by killing it with a stab in the neck, then removes the skin, cuts up the animal as usual, and leaves the heaped-up meat lying as a sacrifice. No prayer is spoken.

764 First of all the ornaments are taken off the deceased individual; sandals and leather apron remain on him. If the deceased is a family father, his sons quickly slaughter a black ox and boil out the fat.

/203 cont./

428
768
[595]

Upon the death of the father, his sons inherit the herd left behind, and, to be sure, each inherits from it the livestock that his mother had had the care and use of up to then. Since the man provides best for his principal wife and gives more livestock to her than to the other wives, her sons naturally inherit more than those of the other wives. The relatively largest part of the livestock is inherited by her eldest son, the principal heir. The livestock that a sonless woman has in her care is divided among the sons whose mothers live on the same side of the kraal, the center line of which is formed by the two entrances, as she does. The custom that the father distributes a not inconsiderable part of his livestock among his sons in boyhood is peculiar. It remains in the herd, however; it is only when the son moves into the warrior kraal that the father gives him a number of cows from it in order for him to be able to cover his needs in milk, and furthermore from time to time a head of cattle to slaughter. Thus the father actually reserves the right of disposal over the livestock, even though the sons designate it as belonging to them, and it is part of the legacy in the inheritance. The wives of the deceased actually pass into the possession of his elder brother, but as a rule continue to live with their sons. The other wives, who have no sons, nowadays not infrequently go back to their paternal home. The eldest son of the deceased takes the father's place for the surviving daughters, which in practice is expressed only in that he confers the consent for their marriage and the bride price will be paid to him. Upon the death of the mother, the daughters inherit her ornaments, and the household equipment used by the former up to now also passes to them. From the estate of a warrior, his brothers, preferably the older ones, receive his weapons and half of his livestock, while the other half goes to his father.

Inheritance.

When the father of a family dies, his eldest son inherits all his property[1], and also the herds and flocks belonging to the childless widows, but not those which are the property of widows who have sons. 428

The sons by each wife inherit the cattle belonging to their mother's family.

If a man dies childless, his brothers inherit his cattle and his half-brothers his wives. It is unlawful for a man's own brothers (i.e. brothers by the same mother) to take his wives. [587]

Should a widow have a son by her late husband's half-brother or by another man, the child is given the cattle which he would otherwise have inherited had his mother's former husband been alive, and he is considered to belong to that family. 587 428 851

If a man dies and leaves a son who is a minor, the property which he inherits is taken care of for him until he grows up[2]. 428 429

It is considered unlawful for a man to inherit the property of his maternal uncle. 428 604

[1] The Masai distribute their herds and flocks amongst their wives during their lifetime, each one being given a certain number to look after and milk. The cattle so distributed are said to belong to the wife's family, and are recognized as the property of her sons, who, however, do not assume ownership until after their father's death. [422]

[2] In a case of this kind, the child does not go to the wars, but marries soon after he is circumcised.

inform Mr. Collyer, the District Commissioner, of their decision. They said that, as their Laibon wished them to move, they were ready to go if the Governor ordered them to do so, but that they did not wish to leave Laikipia. As this was their determination, no attempt was made to influence them, no pressure was put upon them, and the subject was not again broached to them. 648* 311 166

On March 7th, 1911, Lenana died. He had been suffering from dysentery for a month, but was getting better, when he suddenly collapsed. The Assistant District Commissioner in charge of the Southern Masai Reserve, Mr. Crewe-Read, was with him a few hours before his death, and discussed various minor questions with him. Lenana did not nominate his successor, as is the custom with the Masai Laibons, for he only realised a short time before he died, that his last hour had come, but, when he felt he was dying, he made the following speech in the presence of numerous witnesses:— The death of Lenana. 648* 311 166 791

"Tell the Government to look after my children and to give them the money which I should have earned if I had been alive. Tell my people to obey the Government as they have done during my life. Tell the Laikipia Masai to move with their cattle to the Loita Plains."

April 2nd was fixed upon as the date for a meeting with the Masai representatives of both the Northern and Southern Reserves in order to select a successor to Lenana. Masikondi, the senior elder of the Northern Masai, was too unwell to proceed to Ngong, but he delegated his powers to two of the members of his clan. Legalishu, with the other heads of the clans and the spokesmen, of the various age-grades from the Northern and Southern Reserves, were present, and the proceedings were watched on behalf of the Government by Mr. Lane, Provincial Commissioner of Naivasha, Mr. Hollis, Secretary for Native Affairs, and Mr. Crewe-Read. Seggi, Lenana's eldest surviving son, a youth of thirteen years of age, was unanimously chosen as Laibon. Owing to his youth, it was decided to appoint two Regents to assist him in governing his people, one for the Southern and one for the Northern Reserve. Ngaroya, a cousin of Lenana, was selected as Regent for the south, and Legalishu for the north. When these ceremonies were completed, Legalishu stated, on behalf of the Northern Masai, that he wished to ask that they might be permitted to move to the extended Southern Reserve. This change of opinion was undoubtedly due partly to the dying wishes of Lenana and partly to a fear of disruption between the two sections of the tribe. On the other representative expressing a like request, the Masai were informed by their Provincial Commissioner that they would have to proceed to Nairobi and approach the Governor personally on the matter. [429]

Sir Percy Girouard held a meeting with the Masai representatives on April 3rd, 1911, in Nairobi. Legalishu, as spokesman of the Northern Masai, again stated that it was their wish to move to the extended Southern Reserve. The Governor repeated that, if the move were to take place, it must be a voluntary one, that the Masai were completely free to accept or reject the proposed arrangement, and that, if they did reject it, the pledges made to them by the Government in 1904, would be scrupulously adhered to. They thereupon replied that it was their own wish that they might be allowed to move. A formal treaty was drafted, and another meeting was held on April 4th. The members of the Executive Council and the Provincial Commissioners were summoned, and, in the presence of all, the Governor asked the Masai whether or not they wished to move to the extended Southern Reserve. The reply was again in the affirmative. Several minor points were then discussed, Legalishu acting as spokesman. The principal matter was the water question. The Masai stated that, if the Government would help to improve the water supply, they themselves would contribute towards the work by the payment of bullocks. They requested that all Europeans should be removed from the area, and that as much as possible of the area known as "The Promised Land," which had been applied for by Mr. Percy Cobb, should be given to them. Protection from possible hostile raids was asked for and granted. Finally, the Masai begged to be allowed to start the move as soon as there was sufficient grass along the routes, and asked that they might not be hurried. They were informed in reply, that the move was contingent on the approval of His The Agreement of 1911 648* 311 166

• 43 The demand for the individual trade articles varies a great deal. At times the need for one kind is so well supplied that it is either not taken at all or far below its value. Correspondingly, the value of another kind often rises disproportionately high through the heightened demand. A lengthy discussion back and forth precedes every exchange or purchase transaction. As a sign of a settlement, the seller spits [452] on the object. The exchange follows at once; only trustworthy acquaintances are granted credit. The risk in the matter, for cattle, does not pass to the buyer until the day after purchase, otherwise immediately.

426 686 The creditor proceeds against a nonpaying debtor first by complaint, and if this remains without effect, he helps himself to his property by force, provided that the debtor can comfortably pay, but for some reason, usually one that has nothing to do with the debt, does not want to pay: a road that is also often taken as the only one. Only upon his impoverishment will the creditor become earnestly pressing. [672] Then, if the debtor is incapable of paying, his brothers and half brothers, or if such are not present or are unavailable, his paternal cousins must pay. Whether the former or the latter pay, the repayment of the debt is always arranged so that no great economic hardship arises for the one paying. The creditor, if he does not voluntarily [626] enter upon the arrangement, is forced into it by the public opinion, which is often expressed in violence. An inconsiderate collection of an outstanding debt actually never occurs; rather, the creditor almost always displays an extraordinary kind-heartedness and forbearance about it and often lets himself be put off for years or waits patiently until the debtor or his heir is in such a good position that the repayment of the debt will be easy for them. It may also happen that the [581] creditor takes a daughter of the debtor and, after she has reached marriageable age in the service of one of his wives, marries her. [583] Since the creditor, even in this case, /214/ pays his father-in-law the bride price, the debt remains standing in full and the kinship [672] bond only makes its repayment more certain. The heir is liable for

The refuge[1].

If the Masai men beat their wives, some go and seek refuge elsewhere, whilst others suffer and stop at home.

Should a husband beat his wife, but not badly, she will seek refuge in the house of a member of her husband's age.

When the man with whom she has taken refuge returns her to her owner, the latter does not beat her again, for he fears that he will be cursed by the members of his age.

If a woman commits a serious crime, and knows that she will be beaten in consequence, she goes to her father's kraal, and is given an ox, which she takes to her husband and begs forgiveness.

Death.

On the death of a child, or a warrior, or a woman amongst the Masai, the body is thrown away[2], and the person's name is buried, i.e. it is never again mentioned by the family.

Should there be anything which is called by that name, it is given another name which is not like that of the deceased.

For instance, if an unimportant person called Ol-onana (he who is soft, or weak, or gentle) were to die.

[526] [1] Divorce appears to be unknown amongst the Masai.

[2] The body is always taken to the west of the kraal, towards the setting sun. It is laid on the left side with the head towards the north, so that the face looks towards the east. The legs are drawn up to the chest, the left hand supports the head, and the right arm is folded across the breast.

[523]

881 561 tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

881 521 203 The messengers (*ol asai* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). *

Only two of the deputation will be introduced to the class-leader (*oipuenan*) by some of the elders. The message is delivered on behalf [431] of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

881 561 It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engikata*) in full array * followed by a prayer to God (*Ngai Narok* – the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. "In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron*" (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *oipuenani*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say – *Ol piron lang ele, kiro nale*. "This is our fire stick, we are one", which probably means that a new firestick is used to produce

* It is not lear whether the number of boy messengers is fixed. LEAKEY states that the *asai* boys number from six to twelve, DOWSON 24, FOSBROOKE 8. Probably no significance is attached to the actual figure.

* These rows are formed, each distinguished by proper decoration, the first wears ostrich feathers, the second wears lion-mane head-dresses, and all the members of the third have their bodies decorated with white stripes.

[585]

When listening to Masai talking to one another it would often appear as if many of the terms of relationship used were the same as those of cattle, sheep, goats, and donkeys, etc. This is chiefly due to the fact that whenever a woman is brought into the family by marriage it is customary for her husband's relatives and their wives to give her an animal to show that she is recognized as a member of the family. The giver and the recipients ever afterwards call one another after the animal which has been given, to which the particle *pu-* is prefixed.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

601
431

Thus, a man gives his brother's wife or his paternal uncle's wife, or his paternal uncle's son's wife a cow, a calf, or a lamb, and the terms of address used by the two, instead of being *pa-ninkoi* or *papa*, as the case may be, are *pa-lirdip*, *pa-ruka*, or *pa-ungwa*; a father-in-law gives his daughter-in-law a calf, and the two call one another *pa-ruka*; and a paternal uncle gives his nephew's wife a she-goat and calls her *pa-kiwi*. Similarly a man's first wife usually presents each successive wife with a calf on her marriage, and instead of using the term *nenkai* when speaking to one another the two women say *pa-ruka*; a woman gives her husband's brother's wife a donkey as a wedding present, and the two women call one another *pa-nipkirie*; and a mother-in-law selects a cow for her daughter-in-law some months after marriage, when she has learnt to keep house for her husband, and the form of address is *pa-lirdip*. This method of address is carried even further, and is used between men of the same family. A father, for instance, usually gives his son a bull when the boy is eight or nine years of age, and the two call one another *pa-ninkoi* instead of *papa* and *ilnapkai*; a paternal uncle makes a similar present to his nephew, and the same form of address is used; an elder brother gives his younger brother a heifer, and the two call one another *pa'n-dawe*; and paternal cousins often use the terms *pa-ruka* or *pa-nenkai* when talking to each other.

[595]

The following terms are found: *pa-lirdip*, the bullock or the cow; *pa-nenkai*, the bullock; *pa-lirdir*, the cows; *pa-ninkoi*, the bull; *pa'n-dawe*, the heifer; *pa-lirkpei*, the bull calf; *pa-ruka*, the calf; *pa-kiwi*, *pa-ua*, or *pa-nilwa*, the he-goat; *pa-kiwa*, the she-goat; *pa-kidula*, the kid; *pa-dawe*, the ewe; *pa-nenkai*, the ram; *pa-nipkirie*, the donkey; *pa-ungwa*, the ewe lamb; *pa-ua*, the twin kids.

With one exception, a present of this nature is not made, nor are these terms of address used, outside the father's family. Thus, a brother cannot give his sister a heifer so that the two might call one another *pa'n-dawe*, because if the sister marries she will leave the family; a maternal uncle cannot give his nephew a bull and call him *pa-ninkoi*, and maternal cousins may not always use another by the terms *pa-ua*, etc. The exception to this rule is made when a man marries. He then presents his father-in-law with a bullock and his mother-in-law with an ewe, and the terms of address are *pa-lirdip* and *pa-dawe*. These presents have nothing to do with the cattle paid for the bride.

727 the property of the successful warrior. A warrior can
[421] have no property, and hence they all become his father's.

The spoil being divided, the party were next able to do full honour to the men lost in the raid—these being considered worthy of all praise "who rush into the field, and foremost fighting *fall*;" while men who die ignobly at home are only worthy to be despised and thrown to the vultures. Hence the warriors howled and jumped into the air in the dance, till the dead were duly commemorated.

698 In this manner, Moran saw a good deal of fighting, and soon rose to fame in many a campaign to U-kambani, Galla-land, the Coast region, Sôk, Kavirondo, Elgumi, and Nandi. The two latter tribes proved to be the most difficult to deal with, the one from its great numbers, the other from its fighting powers.

669 Civil war next broke out, and he had to proceed to the assistance of his brethren of Naivasha, who were hard pressed by the Wa-kwafi. In these civil wars, the affair was gone about in a very civilised fashion: Sudden and unexpected attacks were not indulged in. A cause of war was first discovered—probably, as in more civilised countries, merely to keep their hands in or as an outlet for internal unrest. Preliminaries were then settled most amicably, and the stakes arranged. A place was next chosen as the field of battle, and to this all the warriors of the two districts came with their cattle and young women. As the fighting would be protracted, a truce was declared, while kraals were built in the opposing camps. A certain number then proceeded from both sides, and like gladiators in the arena, they closed in furious strife, spurred to deeds of daring by the women on both sides. The Wa-kwafi were the conquerors, and the cattle of the Masai fell into their hands; and following up their advantage, they nearly drove their brethren from the entire region. (Of this war I have already spoken.)

522 As a mild relief, and a variation from these serious matters,
186 it was the dearest delight of our swaggering young friend Moran to "draw the badger" in the person of the Swahili porters who might be meekly endeavouring to pass through his country. These he would dub "donkeys," in allusion to their being burden-bearers like those interesting quadrupeds. He could keep the kraal in a roar of delight, as he described how he had frightened this one out of his wits, or spitted another on his spear, or smashed the skull
431 of a third into jelly. The sausage and the beads he re-

6:Thomson K.3 (1883-1884)1887
FL12 Maori FL12

ceived from the traders, he, of course, did not keep 423
himself, but divided among his sweethearts of the kraal.

And so with war and women, life passed in happy fashion. 157
His demeanour was serious, and his expression haughtyish, though he acquired an aristocratic humour truly striking. He showed curiosity in a dignified manner. He rarely indulged in vulgar laughter, and smiling was hardly possible on a face which could only be called fiendish.

He passed some twenty years in this manner. At last his 769
father was found to be on the point of death, and he was 885
sent for. Shortly after his arrival, the old man succumbed.

301
309

HAU-HAUPUTA, MARRIED WOMAN.

It was not thought necessary to recognize this occasion-place ceremonies in any way whatever, and therefore Moran lost no time in picking up the corpse and throwing it outside the kraal. Next morning, he smiled grimly as we going out, he kicked aside some freshly-picked bones, and glanced at some disgusting human shinbones lying, in company with mouldered steaks, while vultures flapped gravely overhead.

He was now sole heir of his father's lands, for his younger 428
brothers did not receive a single head of cattle, though they 885
had captured in their raids considerable numbers of them. Any they might secure now, however, would be their own property. Moran decidedly preferred the free and easy life of 895
the warrior's kraal, but, alas! he discovered, not that he was

is called an *ol-ewal*. The boys may carry knives for defence but not spears, for it is said that a spear is a sign of force, and their quest is a peaceful one. Each boy must carry a bow, for the bow is a token of peace. Furthermore it ensures that any reasonable request the boys may make during the *ol-ewal* will be granted. No Maasai may refuse the request of one who carries a bow in his hand. The boys take no arrows with them. They visit all the principal villages and in dance and song they announce the object of their visit. They then seek out all the bigger boys of the village and add them to their number. If they wish to spend a night at a village they beg an ox for food from the elder of their sponsor's age-group. Elders of other age-groups present them with milk to drink. In this way the news is spread far and wide and finally the boys, now of considerable numbers, return to the elders who dressed them, taking as a gift a large quantity of honey. Then a special village is erected in which only the boys' sponsors and their families may live. The boys borrow ostrich feathers and lion mane head-dresses from the warriors and on the appointed day they collect at the elders' village.

The ceremony commences with a dance called *enjikata*; for this the boys form three lines, one wearing ostrich feather head-dresses, the second wearing lion mane head-dresses, and a third, of boys who have decorated their bodies with broad stripes of white earth to resemble zebras.

The latter must be quite nude; those who wish may wear tight-belts. They may not carry weapons of any sort, but each carries a thin wand, the length of a spear. After much dancing, the boys form a procession and walk round inside the circle of lines following two leaders, one of whom blows a Kudu horn from time to time. The procession then halts and the leader prays aloud to *Engai Narok*—the Black God, to shower his blessings on the boys. This prayer has been taught them beforehand by the elders, some of whom stand by and prompt when necessary. When the prayers are over, the elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return is then made to the village and the elders bring a fire-stick, the one called *ol-piron*, also a male circumcision knife and a small dead bird. This bird may be of any kind other than a dove. The elders block the fire-stick before the assembled boys. They then place a curse upon the circumcision knife and taking the dead bird they break one of its legs and pierce one of its eyes—presumably as an indication of the ill which will befall any boy who dares to be circumcised before the curse is taken off the knife.

In this way, the elders formally lay claim to the sponsorship of a new age-group. From that time the boys refer to their sponsors as *Il-piron*, whilst the elders refer to the boys as *Il-piron*.

shown reluctance, as he may—for many clan chiefs to the office—he is seized by the boys and held until he agrees. Other boys set off to relate the news to his family. When the family has been informed the new *ingiyarani* is presented with his badge of office called *ol kowa* *enk*—the black club. This club is made of olive wood. It must be quite straight and unlikely to break easily. It need not necessarily be black in colour. The club is blessed by the *il-piron* elders who spit heavy wine over it; it is then blessed by the *ingopior* boys in similar fashion and handed to the *l'ingiyarani*. He too is spat upon in blessing and prayers are offered that he may have strength, wisdom, and long life. Later the boys present their *l'ingiyarani* with a heifer and a goat.

If at any time the boys go against his wishes, the *l'ingiyarani* may resign by throwing his club to the ground before a meeting of the boys. Should they be dissatisfied with him they may make him resign by taking away his club. They may even take away the heifer if his offence is severe.

When the boys have elected their *l'ingiyarani* the *il-piron* elders take him, together with a few boys to visit the medicine man. The medicine man always accepts the spokesmen presented to him, and prepares for him a special medicine called *el-ungwenyeki*—the red bull. This the spokesmen is made to drink; it is said to preserve him from whitehairs of the medicine man. In addition, the spokesmen is given various charms for the benefit of the tribe. Possibly one is to prevent cinderpest in cattle, another to cause the cows to calve freely, another to prevent malaria. Usually the charms are sewn in leather bags and are always accompanied by very intricate instructions as to their use. All these charms must be paid for by those who expect to benefit. An instance was related to me of a ceremony held at Lotukuk in 1930 for which a famous medicine man Samburu supplied the charm. Its purpose was to prevent the old men of the tribe from dying until they reached a great age. Samburu received 40 heifers and bullocks in payment. The medicine man does not state his price but it is usual to pay generously for his services as he is a dangerous person to offend.

Obtaining charms from a medicine man is not a matter to be undertaken lightly. Those who accompany the spokesmen are always people of proved intelligence and good memory. Charms are always given with much complicated directions as to their use. If any one of the instructions are overlooked the charm may be rendered useless or may even work evil against its users. The Masai sometimes find that their purchases do not have the effect they desire and report the matter to the medicine man; the latter never fails to point out where an error in the method of its use occurred—and probably affects

[§3] and also provided they avoid such young girls as are attached to men in the warrior
[§3] classes. That these young uninitiated lads even try to have intercourse with married
[§4] women is certain, as there is a special penalty provided for women who so debase
[§5] themselves. (See Marriage.)

[§1] *Preparation for Initiation.*—No boy is allowed to think about preparing for
[§6] initiation until he can show a growth of facial hair indicating puberty. Boys are always very anxious to be initiated as soon as possible, and as soon as they consider that they can make a reasonable claim that they are old enough, they form themselves into groups of anything from six to a dozen, dress themselves in new calf-skins, and, taking with them bows and arrows, go out on a tour of all the villages of the district announcing that they are candidates for initiation and demanding presents. These groups are called *olomal*, and by long custom they must be given anything they ask for which is within reason.

Custom dictates that they shall ask especially for honey and kyrax-skin karosses,
[§31] and these they take and present to senior and influential elders belonging to various circumcision groups, at the same time requesting them to bring up the question of their initiation at the councils, and to make all the necessary arrangements. There is often a delay of anything from six months to a year before the consent of the councils is obtained and arrangements are set on foot. In the meantime the groups of boys continue on their visiting tours collecting more presents as further persuasion to the elders to do as requested, and fresh groups of boys are formed and add themselves to the number of the candidates for initiation.

During the whole time that these *olomal* groups are wandering about from village
[§34] to village they may sleep with any of the uninitiated girls in the villages which they visit (even those who are attached to young warriors), provided that they observe the normal restrictions of the warrior classes.

Ceremony of Seizing the Ox by the Horns.—When at length the elders have consented to proceed with the initiation ceremonies, those elders to whom the presents of honey and kyrax-skins were given make the necessary arrangements for the ceremony of seizing the horns of the black ox. These elders select a village of some elder of the
[§14] Lukumai sub-clan (the ox must always be supplied by a member of this sub-clan), and demand a black ox without any defect and without any trace of other colour on any part of its body. Should the owner of the selected village not possess such an ox he must obtain one from another member of the Lukumai sub-clan, and if he cannot do so he must obtain it from another clan by purchase or exchange, and present it to the elders. This ox is called *enpatong*.

When the ox has been procured, a special village is built near where the ox was obtained, and a day is fixed for the horn-seizing ceremony. Only those of the candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place.

francolin. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *laibartos* and are free to go anywhere "like women," and, in fact, may even visit the *manyattas* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *osinpolos*, which are danced by the novices alone. [535]

981
561
302

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior. [531] [411] [014]

The new warriors now form themselves into groups, and organise the building of villages, which will be their headquarters. These villages are the *manyattas* of the warrior groups (see below). 56 10 36

PART III.—WARRIORHOOD.

The Age-Group System.—The general word denoting an age-group is *ariaiori*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single ex-eizing ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *janjiendobor* and *maraigedienge*. [56]

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *janjiendobor* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *janjiendobor* and a *maraigedienge*, must move out together, leaving the next *janjiendobor* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *maraigedienge*, and in due course yet a third group will be initiated and enter the age-group as *janjiendobor*, after which no further transfer of a novice group can take

11: Leakey E-5 (no date) 1930 FL12 Masai FL12

585 837 *Married Sex Life.*—Among the Masai (as already stated) a married woman's first duty to her husband is to bear him children, and husbands do not mind if their wives have intercourse with other men, provided that they do not do so actually at a time when their husbands want them themselves. Even in such a case—apart [584] from private measures which a husband might take—there is no recognized punishment for the woman, or any legal claim against the man, provided, of course, he is a married man of a sub-clan other than the woman's own.

838 *Sex Restrictions.*—There are, of course, certain definite regulations which must be observed, the chief of which are :—

(1) No woman may have intercourse while she is with child (not even with her husband).
(2) No woman may have intercourse during the actual period of menstruation.
(3) No married woman may have intercourse with an uninitiated boy.
(4) No man in the warrior class may have intercourse with a married woman.
(5) No married man may have intercourse with an uninitiated girl.
(6) No woman may have intercourse with a man who is the son of any member of her husband's own age-group ("They are as his own sons, whatever their clan may be").
(7) As already mentioned, the rule of sub-clan exogamy applies as much to general sex life as it does to marriage and, therefore, a woman must avoid all men of her own sub-clan.

684 PUNISHMENT FOR BREACHES OF THE ABOVE REGULATIONS.

Breach of No. 1.—There is no fixed punishment for a breach of this regulation, but the man would be accused of causing damage to the child, and should abortion take place later, or the child be born with any deformity, he would be held responsible.

Breach of No. 2.—There is no punishment for a breach of this regulation, but it is simply "Not done."

Breach of No. 3.—A woman who is found infringing this rule is severely punished in the following way. She is tied up and severely beaten by her husband, so that her whole skin is bruised, and then sheep' urine is poured over the abrasions. This will cause very severe pain for many hours. The boy is not punished, as the fault is held to be entirely that of the woman, who should know better. In actual practice the boy is expected to bring the husband a present of honey beer in order to placate him, and so avoid being caned with a very potent cane. [683] [684]

Breach of No. 4.—There is no punishment for the woman who is found to have broken this rule, nor is there actual punishment for the man, save that if his sin is discovered he is dishonoured at once by his fellow age-group members, and even if not found out at once, his dishonourable conduct will be found out at the *Enoito* ceremony (see p. 191), when his turn comes to enter the dispire.

11: Leakey E-5 (no date) 1930 FL.12 Masai FL.12
Kenya

Breach of No. 5.—A married man who breaks this regulation and is found out is very severely punished, the punishment being left to the women of the village, who have the right to beaten and seize all his cattle.

Breach of No. 6.—The punishment for this is as for a breach of No. 5 as far as the women is concerned, and likewise the man must take beer to the aggrieved husband to avoid a curse.

Breach of No. 7.—A man who breaks this regulation is held to be solely responsible, no guilt whatever attaching to the woman. As this offence (intercourse with a member of one's own sub-class) is the worst possible, the penalty is very severe indeed. Every animal the man possesses—cattle and sheep alike—is beaten strong and otherwise maimed and left to die, and if the man can be caught he is so severely beaten and maltreated that he is almost certain to die too.

The Marriage Transaction.—The usual number of animals transferred as marriage settlement are :—

1 Heifer.
1 Ox.
1 Ewe yearling.
1 Ram.
Also honey beer in large quantities.

Of these, the ram is slaughtered by the mother of the bride, who is assisted with its fat.

When a girl who has conceived before initiation is being married by a man other than the lover who was responsible for her condition, only one heifer is given (instead of the three mentioned above) at the time of the marriage, but the other two heifers must be handed over at such time as the first of her children is initiated.

PART VI.—FAMILY LIFE.

The Relation of Parents to Children.—As already indicated, a man's legal children among the Masai are—as often as not—only his by virtue of his being the husband of their mother, and quite irrespective of physical parentage. Nevertheless, fathers are very proud of their children, and take considerable interest in their welfare. They must always be present at the initiation of a son or daughter, and feel very hurt if for any reason they are prevented from doing so. When a son grows up and eventually forms a village of his own, his father and the other men of the village who belong to his father's generation may not come and feed at the new village until one of them has been presented with a heifer called *ashoo* by the young man.

913 931 601 *Gifts to Certain Relatives.*—A somewhat similar custom is that which ordains that a grown-up son must give certain presents to all children born to his father, as follows:—

(1) To a young girl-child, either a heifer or else a young cow or young she-goat which has not yet had young. If the former present is given the child in future calls its brother (or half-brother) *bunki*, and if either of the two latter animals is given the appropriate name is *bebre*.

(2) To a boy-child, either a heifer or a young ram or else a young cow or she-goat which has not yet had young. The following are the appropriate names by which the boy henceforward calls the man: *Ikulee* if the gift was a young cow, *ingini* if the gift was a young she-goat, *ndome* if the gift was a heifer, *ekiboro* if the gift was a young ram.

A grown-up son must also give a present to any new wife married by his father, the animal given and the name thenceforward used by the woman to the man being exactly as in the case of girl-children above.

604 *Mother's Brother.*—Among the Masai I can find no trace of any special functions of the mother's brother, and he has no special position in relation to his sister or her children.

597 *Widowhood.*—There is no idea of uncleanness attaching to widowhood, and therefore there is no ceremonial purification ceremony before normal life can be indulged in by a widow. When a woman is left a widow she builds herself a hut [607] with one of her husband's own brothers (i.e. brothers by the same mother), and he becomes responsible for her welfare and acts in loco parentis to her children so far as making arrangements for initiation and marriage, etc., are concerned. In no circumstances, however, may this brother or any other of her husband's own [610] brothers have sexual intercourse with the woman. If she is still of child-bearing [612] age she is expected to go on having children (who will rank as her late husband's), and to this end she may have sexual relations with:—

597 [614] (1) *Any* man of her late husband's age-group, who are not excluded by other restrictions (see above).

(2) *Any* of her late husband's half-brothers (i.e. brothers by a different mother).

(3) *Any* other men not otherwise excluded.

597 *Sickness.*—My informant was unwilling or unable to give me any detailed information about the treatment of sick people, save that medicines were made from the barks and seeds of various trees and from the stomach juices of slaughtered animals.

PART VII.—DEATH AND BURIAL.

% *Death.*—Death is looked upon with fear and, therefore—except in the case of very old men and women past child-bearing—every precaution is taken to avoid a

Kenya

Protecting Lost Cattle and Sheep.—If during the day cattle or sheep stray and cannot be found before nightfall, the following interesting ceremony is performed. There are certain men and women (they are not necessarily anything to do with medicine men or witch doctors), who have the power to protect straying cattle, and so soon as a herdsman discovers that some of his animals are lost and cannot be found before dark, he sends with all haste to one of these individuals. If possible the messenger should be a small boy, and he takes with him the staff that the herdsman of the lost cattle was carrying at the time. This staff is handed over to the person who is to perform the protecting ceremony, which is as follows:—The staff is taken and tied up with a leather thong removed from the "Protector's" waist, and is then placed at the head of the "Protector's" bed until the following morning. As an alternative, if there is no staff available, a cinder is taken from the fire and is placed in a cooking pot, the mouth of which is then covered with a skin dress belonging to the "Protector," and the skin dress tied down with the leather thong. In either case, while the tying is being done certain fixed formulæ are uttered by the "Protector." These may be translated as follows: "I tie the lyons's mouth," "I tie the lion's mouth," "I tie the leopard's mouth," "I blind the thief's eyes," etc. Once this ceremony is performed the lost animals are considered safe from all dangerous animals and from thieves. In fact, even the owner would pass right by them and not notice them, for they have become invisible.

Next morning the animals are "released" by the "Protector" and the owner can go out and find them at once. There is no fee paid to the "Protector" for performing this ceremony, but he (or she) should be given a little meat.

Driving Out Disease.—In the case of a serious outbreak of disease, one of the more "Protectors" is sent for to perform a "driving out" ceremony. All the cattle and sheep of the infected village are brought together into the cattle enclosure and a ceremony called "Chuse nooonyiaka" is performed. The "Protector" selects a young bull and a young heifer of about the same size and of the same colour (these two animals must be of a single colour and not piebald or spotted in any way). He also chooses a small boy and a small girl. He then instructs these two children to drive the two animals slowly right round the outside of the enclosure and back through the entrance to the cattle again. This "going round" ceremony is accompanied by appropriate sentences by the "Protector" bidding the disease depart, and the ceremony ends. The "Protector" is given beer as a fee. After such a ceremony any cattle disease is supposed to die out quickly.

Preventing Mating.—Among the Masai it is a common custom to put a special shield on to bulls to prevent indiscriminate mating. This shield consists of a square flap of leather which is fastened just behind the animals' hindage by thongs which come up over the ribs and are tied in the region of the animal's back. This practice is especially common when cattle from several villages are being herded together during the day. Then when the cattle return in the evening to their respective

/42 cont./

60 As soon as the man marries another woman, each of his chil-
• 48 dren present her with a head of small livestock and call her ac-
95 cordingly, ba-ger, ba-gine, ba-ndare, ba-ndem, or ba-isin. The term of address for father-in-law is always ba-geneh, for mother-in-law, ba-ger.

Brother and sister call the sister and half sister en ethe. Brother and sister call the brother and half brother ndijo. The form of address for the father's brother, baba; the mother's brother, abula; the sister of the father and of the mother, bibi. The brother of another wife of the father is addressed as baba, if he is old; by his name if he is younger. The sister of another wife of the father is called bibi if she is old; en abinik if she is younger. The latter (pl. 'n abinwa) is also the term of address on the part of /42/ unmarried men for a woman in general. The uncle calls the nephew abula, the niece 'n gabulija. The aunt calls both en gewi ai : my child.

60 For the terms of address of those relatives whom we designate
60 as male and female cousins in the narrower and broader sense I was able to construct the following rules from a very large number of examples:

1. If the relationship is derived from the mother's father or from the husband of the father's sister through consanguinity or relationship by marriage, the boy calls his male cousin abula, boy and girl call the female cousin en gijo before her circumcision and 'n gabulija afterwards. The same designations are customary for (friendly) members of the lineage of the mother and of the husband of the father's sister.

2. If the relationship is based on consanguinity through the father's brothers or on membership in the same lineage, the male cousin will be called ayahi by a boy, the female cousin 'n ethe by boy and girl, both before and after her circumcision.

The girl calls any boy standing in a cousin relationship to her, according to one of the two rules, ni ainiky 'Ng ai : the one given (me) by God.

/43 cont./

601 605 [431] The designations ábula, en gíjo, arahé, and 'o ghe are used only as long as the above-mentioned terms of address are not affected by gifts of livestock. This explains why they are used only among children. This does not apply to the address of alachá ng ai, because the girl is not in a position to make the necessary gift of livestock.

601 The son and daughter of the brother or of the sister are addressed, as long as they remain in childhood, with ng gerai ai = my child. The address for the grandfather runs ng aleja, for the grandmother laiko. The grandfather calls the grandson ng alej'ai; [431] the grandmother, laiko ai. Brother-in-law and sister-in-law are [651] called by name or the terms of address derived from livestock designations.

IV.

600 Conjugal relations. -- Betrothal. -- State of being betrothed. -- Bride price. -- Evasion of the bride price. -- Obstacles to marriage. -- Wedding. -- Beginning of the marriage. -- Dissolution of the marriage.

531 The conjugal relationships are very loose, and in some views about them the Masai stand in unfavorable contrast to their sedentary 595 Negro neighbors. As among the latter -- and, to be sure, with- [171] out exception (1) --

> 1. The so-called monogamy of the Wambugwe is in practice the boldest polygyny.

polygyny prevails among the Masai. The number of wives of a man is limited neither by law nor custom, but depends only on his means. If a man has but one wife, poverty is always the reason. 531 There are no temporary or trial marriages; rather, marriage is a [513] more stable relationship. The woman through the marriage passes [618] into the family of her /ad/ husband, but not into his lineage; rather she retains membership in her own lineage.

/44 cont./

582 for the contemplative idleness of the married man. But before the
583 marriage takes place the bride price is to be paid first.

As bride price (an dagkin : the things, each part of them, an dagi : the thing) he first pays the bride's father five pots of honey from which beer will be brewed, furthermore three cows and so on. The bride's mother receives a male and a female sheep. The ox and the male sheep will be eaten at the feast taking place on the
[601] wedding day. Around that day, more often afterwards than before,
[561] the /45/ bridegroom further brings the father-in-law a cow and the mother-in-law a female sheep that has not yet had young, whereupon the former call each other be-gasé (1).

1. Cf. Second Part, III, terms of address for relatives.

while the bridegroom and the mother-in-law call each other be-gar
585 from now on. Every wife married later receives at the wedding
[595] from the principal wife of her husband a year-old heifer, whereupon
[481] the two call each other b'-ambe, from the eldest child of her hus-
[551] band two goats or sheep, hence the address be-ainan, and from the
[601] smaller children of four to six years old and upward a goat or a sheep each, through which the address be-gine, be-ainan, or be-
583 lele is brought about. During the period immediately after the wedding, the mother-in-law receives from the son-in-law several more pots of honey, skins for clothing, and iron wire for making
[791] leg and arm ornaments. In the family of Chief Zendeo he receives, as he told me, only a cow as bride price for one of his daughters, while the mother of the girl gets two donkeys, a bull and a cow with calf. Since the last ceremony it has happened not infrequently that a man is not in a position to pay the customary bride price. He then gives the father-in-law only one cow and leads her to him on a rope twisted out of grass. Whenever the bridegroom or young married man delivers the gifts of livestock himself, he always sends the honey by a woman. She is either a wife married previously, his mother, his elder sister, or a wife of his brother. Only when the distance is very great does he deliver the honey himself,

/61 cont./

[5]
[5b]
father-in-law must return the bride price if he grants his daughter admission. If the woman who has run away has had children, her husband keeps them; in this case the woman's parents do not pay back anything.

[131]
[6]
[6b]
On the day the parents-in-law receive the bride price, the bridegroom gives the eldest brother of the bride a year-old heifer, each of her other brothers and each sister of the bride a male head of cattle. This is only a gift of friendship and has nothing to do with the bride price. Exchange of wives occurs, but does not result in a valid marriage, any more than does wife stealing. On the other hand, it is not infrequent that the girl flees from her maternal hut as soon as she reaches marriageable age and runs to her lover. It often happens then that the girl's father sends a band of boys armed with sticks after her so that through the beating she will be induced to return. Since the boys act at the command of the old man, neither the bridegroom nor anyone else may hinder them. In order to protect the girl from such violence, only one course remains to the bridegroom, to leave the kraal with her immediately and move into the forest for a few days. With this he makes it understood that he will oppose with weapons anyone who might will venture to take his bride from him and at the same time he deprives the girl's father of any further right to object. As soon as the couple in the forest have consumed a cow, they return to the kraal, where, without further ceremony,
[6b]
they are recognized as married. Only the girls of the Il ungumi and Il ilmelle do not have this possibility of self-help, for both lineages believe that a girl who goes to her lover in order to remain with him as his wife without her father's consent will die in only a few days after the flight.

[7]
[7b]
[7b]
[8]
In olden times the bride was not supposed to belong to the tribe of her bridegroom. The livestock epidemics of the last 30 years, however, which resulted in the death of many thousands of Masai, have modified this law somewhat. Accordingly, /62/ a man may marry a woman who belongs to his tribe, but not to his lineage, whereby in individual districts there is the further prerequisite that the girl came to him of her own free will and, after being sent back

/71 cont./

561 576 *ne tina* to *ni mówne* *ishi*,
ne ohligin to *ni mówne* *ishi*, or *ni mówne*. If the lover is almost the same age as her husband,
hoko to *ni mówne* *ni mówne*.

[572] Friends often address each other with *ni tiwe hi* or *ni honi* = my friend.

Instead of the address term *'a ohink*, as *ni hoami* or as *ni mwéki* says to an *ne ohligin* whom he has known from childhood *'ohligin* or *ne ohligin*, whereas *ni mówne* in the same case uses the address term *mówne*. The terms of address "*'a ohink*" for an *ne ohligin* is more polite than "*ohligin*," the latter used toward a strange *ne ohligin* would be downright impertinent and rude (1).

1. In places the term *ne ohligin* also has the meaning "married woman"; thus, at different times I heard a young woman call out coldly to one not entitled to use this designation when he used it: "I am not your *ne ohligin*."

The obsolete term address *ne ingin*, used for *'a ohink*, is often regarded nowadays as effectively polite.

[561] [576] [574] The terms of address required by kinship or livemark-gift take precedence over the above.

/To cont./

After he has counted off the little stones of his oracle game for a while, he decides that M., the son of M., is to become ol-oononi. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol-oononi who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol-loolo members there and, with them, again set out for the ol-ilkoni. Then a very large hut (ol-ilgiro enyang) is built there. When it is finished, the speakers take a number of women into their confidence and tell them who has been named ol-oononi. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon as this has been accomplished, a few of those standing around him push him down onto the stool, others place a string of blue ring-beads (ol-gondiga) around his neck, tie the spiral ear ornament made of copper wire (o-nyolio), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (o-mugiri) of the warrior, and in its place drape around him the long one of the married (the ol-gula i ol-oononi). Finally all those present cheer the new ol-oononi and cry out Ingwed ie ilfo ol-gielon, that is, remain poor, bring no luck. The Masai in general maintain that every ol-oononi has remained poor: if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain denied him. But he does not need it, for every man under him is obliged to give to the ol-oononi visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by reason of the gifts that fall to their husband, an excess of foodstuffs always prevails.

After the ol-oononi festival is over, the other ol-loolo members remember back home not celebrate a long meat feast (ol-bull), whereupon they /the/ usually set out on a war expedition, while the ol-oononi himself goes back to his kraal and remains there.

/77 cont./

561 of all the age-fellows is first convened, so that they /78/ may choose
791 a delegation from their midst. To it belongs in the first rank the
speaker, then a rather large number of the youngest and handsomest
ol barnot. All are provided with rich adornment, as well as beauti-
ful weapons. Each ol barnot has brought along a fine herd of
• [431] cattle. The large herd formed by this is taken along by the dele-
gates as a gift for the ol oibonj. When they have thus presented
their request to the mighty one, he directs them to come the next
day, when he imparts the answer by giving them, for example, the
name ol piakua. The ones circumcised during the period from 1896
to 1901 were given this one. It is supposed to mean: the generation
after these weakened and impoverished by the rinderpest. After the

561 delegation has been dismissed by the ol oibonj, they return to their
791 native kraals. At a gathering again held there, all learn the new
[714] name and then consult about the choice of a shield ceremony.

[Warrior Kraal]

/91 cont./

701 Fighting, large leg bells (ol dwiliu kiwu), the tinkling of which in
654 the latter instance serves to prevent a going astray by the individual
[714] warriors and a scattering of the troops. Where the bell sounds is a rallying
[334] point.

A special position is also occupied by the ñ gilwiniri a benefac-
[554] tor. They are warriors who, themselves gaunous, also have a gau-
nous, well-to-do father. From him they often receive cows for
slaughtering and then distribute the meat among their comrades and
all strangers, without distinction as to age and sex. If such a bene-
factor is wounded in battle or if he suffers an injury elsewhere on the
march or at home, the others are concerned about him and cooperate
with one another to help him to the best of their ability.

701 Accordingly, miserliness is sharply condemned, and a miserly
703 warrior or one who has miserly parents is treated badly and, in case
977 of illness or wounding on the way, is not infrequently left to his
helplessness.

701 Speaker and leader live like other warriors and are not surrounded
678 by any special ceremonial. Off duty they are treated with respect,
[554] which is shown especially by the fact that people avoid coming too
close to their girls or lightly seizing an excuse for a quarrel with
them. Among the other warriors these two things almost daily lead
to serious disputes and often enough to duelling, in which the op-
ponents go after each other with sword and club, but only very rarely
[481] wound each other seriously. If this should happen sometimes, in a
few districts the wounded one receives from the victor a fine con-
• [934] sisting of livestock; in other districts, only if a bone is broken. In
general immediately after the duel /92/ sometimes only after the
healing of the wound, reconciliation follows, the formality of which
consists of the mutual exchange of sandal thongs and sometimes also
701 the exchange of the skin caps (o mwiñi). The matter becomes more
578 serious if one is killed in a duel. Then the father of the victor is then
682 condemned to pay a larger number of cattle. If he hands them over,
the affair is settled. If he refuses them, however, the friends of the man
killed attack his kraal and rob him of his entire herd. But they have
scarcely brought them home before the friends of the one killed also
try to recover them again. This goes on until they have because tired

/[illegible]/

Ill. 77. Gerson camp on the war march.

the time for the attack. /[illegible]/ The leader of the section is one of the above-mentioned beneficiaries, recognizable by an ornament called *si dengdu* or *si gawdu*, which consists of strings of iron or glass beads and is worn around the right lower-arm, a gift of those who have benefited by his generosity.

Accompanying the warriors are one or more surgeons *tai ziddu*, *si ziddu*, whose duty is the immediate treatment of the wounded. They choose their "dressing station" approximately half an hour from the battlefield on an elevation made known and easy to find.

Toward midnight the spies *tai siandaiwu*, *si siandaiwu* set out to go to Kaka. On the way they adapt their ornaments in clothing and ornaments as much as possible to that of the Wakaba and take /Ill. 78 appears here/ shield and spear along the way. With enviable inoffensiveness they move about among the foreign populous, trading to their amulets. With a little fresh cattle dung and a few tail hairs plucked from the Kaka cattle, as proof that they have actually seen cattle, they return to the warriors in great haste.

[illegible]

yellow long-tailed monkey (*Cercopithecus cynosuros*, *et alibidis*), the black long-tailed monkey (*C. albigularis*, *et albus*), the heavy badger (*Melliverus capensis*, *et badis*), and a few other smaller animals.

Around the right wrist, often covering almost the entire lower arm, these women who are gamesome and benevolent, the *I gamesis* wear a cuff (Fig. 50) that consists of rows of iron beads (*et hemiglis* or *et gabanus*) put close together, in whose place to more recent times appear ordinary small -- especially blue -- glass beads. The iron beads are made by pounding flat small wire rings and then putting them, strung on this strips of deep leather, around the lower arm and knotted on the inner side of the arm. These people who constantly enjoy the kindness of the *I gamesis* express their gratitude from time to time by giving a string of such beads, as they, as we said, the ornament often extends almost to the elbow. Most rarely then among women, the ornament is also found on one or another of the young girls living in the women kraal. If a girl has no brother belonging to the warrior sending, but does have a wealthy father, the receiver took the large bath which cover and as ornament

Fig. 47. Arm and leg ornaments of the women.

301 /full name/

piece of doughnut-shaped bamboo. The men generally distribute milk and meat and thus acquire the position of headsmen.

The arms and legs of a beauty, except for the thighs, are each into a more or less complete array of tubes of iron wire, which often leave only the knee and elbow free, while among poorer women this adornment dwindle to a few coils. These tubes are called as *mapalgal* - iron wire, and are differentiated according to their location as as *mapalgal* of bracelet for the upper arm, as *mapalgal* of anklet for the lower arm, as *mapalgal* of armlet - what is worn on the lower leg (below the knee). This ornament, like the neck spiral (as *mapalgal* a *sum*), /*lab*/ is wound directly onto the body part in question and can therefore not be taken off, but only unwound again, which usually does not occur until death. The weight of the ornamentation seriously impairs the mobility of the women and not infrequently gives them a waddling gait.

Women in dance ornamentation wear around their hips a leather strap embroidered with small beads (*alg gas ca*) *bilki alg gas* is any strap, not beads - the hips. Little girls also wear a like-worked strap; it does bear a row of small chains in front or a fig leaf and is called as *dad* (pl. *as dadis*). Older girls and women wear around their hips as neck-wide belt likewise stitched with beads (Fig. 97), which holds the leather apron together. Boys and younger men often wear below the knee and above the calf a ring made out of white goat's hide, with an end five centimeters long and one centimeter wide hanging down in front and in back (Fig. 98), and around each ankle a small bell (*as dadi*, *ab* /Figs. 97-8/ appear here/ *dadibi* (Fig. 99)) cast on with a little strap, which, by its widely audible rattle in the silent steppe, is supposed to frighten off predatory animals lying in the grass. Finally with the war and dance ornamentation belong the long-haired black and white strips of skin (*a mangas*, *a mangas*) that the warriors tie around their ankles and that are made out of the skin of the white-tailed colobus (*Colobus vaudeuti*).

/314 cont./

the full debt, not only up to the amount of the inherited property. If a warrantor is liable for the debt, he must satisfy the creditor if the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the *ai mauwai* = divine judgment. The blood is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the head to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a maul with the legs upward, or he wraps the legs of the maul or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries. The *ai mauwai* is a divine judgment. A person who does not grant the request expressed in the *ai mauwai* sign will soon be punished by Ng at through death or illness. A person who did not grant the request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men where he serenades with a head of cattle and heavy bow. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

Leases or contracts are unknown. The creditor does not have a right to the corpse of the debtor; neither debts nor misdeeds or crimes committed by the deceased have an influence on the nature of his burial.

No distinction is made between murder and manslaughter, but there is one between these and negligent homicide. If murder was committed by a boy or warrior, it is expiated by blood revenge carried out by boys and warriors or only by warriors. Any brother of the one murdered is first of all entitled to carry out the blood revenge and, further, any man belonging to the family. Blood

629 [a] Sections: A section is defined by
630 Pedersen (1948:7) as "a coordinated unit of the Masai, the members of which regard themselves as owners of the waters and grazing grounds, to the exclusion of other sections. Such a unit is called *ol ashe* pl. *il ashe*. Since as in groups the sections function as units in war, in allegiance to a particular laibon, and in the performance of certain tribal ceremonies. In general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers."

[b] Most of the Masai in Western Kenyland
629 in Kenya are of the Purko section. The Laitu section
630 live on the Laitu Plateau. These small sections, the Matiatio, Kaabi Siabu, and Siale, live above the Siale
• [c] Escarpment. The first two are at least partly cultivators. In Tanganyika, the Kaangat section occupies the Kaangati Plain (which are named for them), and the Kisal section lives in the area between the Kaangati Plain and the Rift, including the Ngorongoro Highlands and the
629 southern Laitu Plateau. There are a number of sub-
630 sections and divisions of these main sections. The original section organization has been much altered. Gray (1954) describes in detail these alterations for Tanganyika.

/140 cont./

had been seen with the bleaching skulls of those who had starved and
131 out of the sickness scenario. Any of the women and girls who had not
died of hunger sought and found refuge among Negroes practicing
[5-4] agriculture, who always like to buy or kidnap female individuals.
A mother would sell her child for a handful of maize and would sell
herself a day later for a similar price. In order to avoid starvation,
Negroes and caravans /140/ took possession of the still-free ones, in
order to resell them as slaves. Many have since come back, in part
through flight, in part through redemption by their relatives, but
more are still found in strange hands. The latter, even though their
blood lives on beneficially in the new mixture with Negroes, are
132 permanently lost to the blood people. So greatly has the uniformed,
to which an opposite effect is so often attributed, broken up the
24 former organization, the free unity, that, soon after the end of the
epidemics, the unhappy quarrel between the brothers Lenana-Zendee
about the undivided rule over the blood could begin. With its con-
tinuing civil wars it acts powerfully toward the completion of the
destructive work of the epidemics. The Negroes, with whom alone
[5-4] the blood formerly waged war, except for smaller undertakings
[5-5] among themselves, which have more the character of provocations
than of serious battles, were opponents inferior to them. Now equal
parties stand opposite each other, which makes the war bloodier,
more destructive.

Through increasing impoverishment as a result of these epidemics
and civil wars, there is now going on among the blood -- as formerly
among the Wakuafi -- a change from nomadism to sedentarism.
• [5-3] Agriculture is taking the place of animal husbandry. The men
[5-4] detecting the "people" in this manner are founding settlements, in
part self-sufficient, in part supported by Negro tribes, somewhat
removed from the dry steppes, there where the watering is adequate
for the laying out of plantings. No one expects them to prove to be
particularly skilful at this but Nature, which good so far to meet
her children in the tropics, helps here too. A moderate watering
suffices to make the bulbs down stuck in the virgin soil grow and
produce tubers. Maize for the most part appears just as easily
satisfied as sd-sorghum. These then are the principal useful plants

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oibani," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 324-330, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify.

The Medicine-men

The Laibon

The power displayed by the pastoral Masai "Morans" in raids on surrounding tribes combined with their ceaseless activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1906, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the mobs which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 200,000 head were counted. By March 1914, all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 600,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. R. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,600 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains untenanted on that account, no attempt having been made to utilize veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 42,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilized tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock.

The Masai

[28]

[31]

[16]

[26]

641*

In his reply, dated the 3rd of December, 1913, the Secretary of State observed that in his opinion the time had not yet arrived when it was either necessary or desirable to impose a cattle tax on the Maori which might be thought by them to be the object of a consequence of the Maori wars. The Secretary of State, 3rd December, 1913.

In a despatch to the Secretary of State, dated the 8th of March, 1914, the Governor remarked that a review of the general system of native taxation would no doubt be necessary in the near future, but he considered that this was not a matter of urgency and might profitably be held over until the amalgamation of native administration had been effected. The Secretary of State agreed that the question might well be deferred. Sir Henry Rolleston, 8th March, 1914.

On the 29th of July, 1914, Sir Henry Rolleston wrote that he considered the time had come when a tax should be imposed on the cattle belonging to the pastoral tribes on the ground that the precautions taken by Government to prevent the spread of disease had resulted there in largely increase the number of their herds. He desired that the incidence of taxation should be such as to encourage agricultural industry and discourage pastoral speculation. He therefore appointed a Committee, consisting of Messrs. Ainsworth (Chairman), McCallum, E. T. Rennell and Tuckwell, to consider the subject. Owing, however, to the outbreak of war, the sittings of this Committee were delayed and were in fact never held. Sir Henry Rolleston, 29th July, 1914.

Mr. Ainsworth considered the question in December, 1914, and the first three months of 1915, and submitted a report on the general question of native taxation on the 29th of April, 1915. In that part of his report which dealt with the Maori Reserve, he considered that the Maori in the Maori Reserve generally, as regards occupancy and taxation, a totally different problem from that encountered in considering the case among agricultural tribes in the Protectorate. The Maori were pastoralists, whose mode of life, customs and requirements differed from those of agricultural natives. They required much more land than agriculturists, and had many fewer inhabitants to the square mile. Mr. Ainsworth, 29th April, 1915.

Statistics of the Maori Reserve estimated the population at 10,000 souls, the number of horned stock at 300,000 head, and of sheep and goats at 2,000,000 head, while the area of the reserve was approximately 4,000,000 acres. The annual taxes paid by the Maori amounted to Rs. 30,000 only. Mr. Ainsworth quoted, by comparison, the case of three agricultural districts, whose total area was 2,100,000 acres, whose population was 600,000 souls, and which paid Rs. 600,000 in hut and poll tax. [161] [131] [251] [131]

The capitalised value of Maori stock was so large as to make the natives worth about Rs. 600 per man, woman and child, and, supposing that the capital account turned over but 5 per cent. per annum, the annual exchange of the tribe would be worth Rs. 47 per head. The total personal wants were very small, while they paid less than one rupee each in annual taxes. It was therefore evident that the Maori did not contribute their fair share to the Protectorate revenue, and that some readjustment was necessary in their case. [154]

In regard to the manner in which the Maori should be taxed, Mr. Ainsworth observed that their nomadic habits and mode of building huts rendered the method of collecting revenue under a hut assessment a far more difficult matter than it was in the case of agricultural tribes. He also considered that any system of poll tax on able-bodied males would be equally unsatisfactory. He therefore proposed a scheme which had been put forward by Mr. Rennell and which he outlined as follows:—

In order to find out the approximate taxable value of the Maori, the tax should be worked out on a percentage, based on the annual unimproved value of the land. The amount due would be collected in the form of a cattle tax (ignoring sheep and goats). The acreage of the reserve being nine million acres, the unimproved value being assessed to be Rs. 3 per acre, a tax of 1 per cent. on the unimproved value would produce a revenue of Rs. 270,000. This amount would be divided amongst the total number of cattle estimated, and would amount to 24 cents, per head on half a million head of cattle. Mr. Ainsworth considered that there would be considerable difficulty in counting the cattle, and suggested

/[illegible]/

The earnings of the men who are growing up to become workers consist of captured livestock and in the main passes into the father's hand. Actual separate goods for the individual members of the family are only clothing and ornaments, for the men also their weapons, and further for boys the livestock given to them by the father, for youths and women the dues of the captured cattle which they keep for themselves.

The family head is the father of the family. If an older man of his family also lives with him or in the same or a closely neighboring kraal, the two share in the office of the head in such a manner that in all decisions people listen to and heed the counsel of the older man. Legally the head can be deposed by his brethren for mismanagement and incompetence, but this seems to take place only very exceptionally. The head makes the decisions in all family matters. A right to kill and punishe the members does not belong to the father of the family; just as he is not responsible for their debts and misdeeds, neither may he sell or pledge them. The fact that during the famine caused by two cattle epidemics that followed each other in a short time around the year 1890 children and women were given into slavery by their relatives does not prove anything to the contrary. When the corpses of many thousands of the starved lay in the veldt and there was no food of any kind for the survivors, an escape remained for them other than to give themselves or their relatives as serfs to such people as could feed them.

Individual members may detach themselves on account of bad treatment. One who detaches himself flees to another of his lineage or to the one from which his mother stems and purchases his admission with a few cattle that he has stolen from his father's herd and taken along. If he found acceptance in the latter, he must return to his own as soon as he becomes a father.

If a girl is expelled, she may freely choose her future abode, irrespective of tribe or lineage. Wherever she finds admittance /[illegible]/ she usually remains permanently, in that she marries a member of this lineage. That is, the men and girls taken in remain memmbers of the lineage, despite their admission, so that they can enter into a legal marriage with members of the lineage concerned.

other leaves, for example, from the banana, and then left to ferment for several days. These they are hung up to dry in the shade or in the hut, and, as soon as they are sufficiently dry, they are packed together in the above-mentioned packets. To make the ball tobacco, on the other hand, /[illegible]/ one tightly pounds in a mortar the fermented and dried leaves, after they have been sprinkled with water, without, however, thoroughly breaking up the leaves. The very moist mass is then shaped into balls, which are left to dry in the sun. The Miami pay a guarantee for two packets of about half a pound each or for ten balls. Only the old people use tobacco. The men smoke, sniff, and chew it, while the women content themselves with chewing and sniffing. The tobacco intended for smoking is coarsely cut. The tobacco pipes (Fig. 5) consist of a thin wooden tube about a foot long (or more) and a centrically shaped clay or wooden bowl (of which). The latter is carved by the Miami themselves, whereas they buy the clay bowls. For chewing one uses

Fig. 5 (1)

Fig. 5 (2)

the same tobacco and chews it with a little pea-sized piece of cotton salt (a magic). To prepare the tobacco for snuff, the smoking tobacco is first cut as fine as possible and then ground to powder with a round stone in a piece of gourd shell. To this one

326 as an iron screw points, a part metic for the other things he is paid
(476) with milk. If the orderer furnished the iron wire, only half of the price named is given as payment for the labor.

From thick brass and copper wire (ne mikh, ne mikh ebes, brass wire; ne mikh pal, copper wire) the blacksmiths draw this wire. For this they use an iron the ol gnim and the ol gnmdh. The former is an iron approximately a foot long (Fig. 394), which is so both thick in the middle and on both sides often tapers to points. In the center it has a few conical holes of different widths through which the wire is drawn. But subsequently the ol gnim also consists only of a piece of strong down iron that /116/ is not pointed on the ends. The ol gnmdh (Fig. 395) serves as tongs and has the shape of sugar-tongs whose grasping arms are squeezed together by an iron spiral drawn around them. The drawing of small pieces of wire is done by hand, whereby one uses grasp the ol gnim, the other the tongs. For larger work the former with its two points is wedged into a forked

326

Fig. 394.

wooden block, while the wire already drawn through is fastened to a roller resting on two forked brackets. By a slow turning of it the wire drawing then proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The

/Text cont./

[illegible] already been discussed elsewhere (5).

1. Cf. Sal Pan, 5, 19, 23.

All disputes arising in this connection are settled by the head of the family without formal procedure.

421 The property rights are little developed. There are no problems with reference to landed property. The pattern land of the district is the common property of all its inhabitants. The plots are so large that there is more than enough pasture for everyone's herds. Property belongs to a single individual, not to the family jointly.

425 A lost article, if the loser lives in the vicinity and is known, will be returned for a reward (for example, for a spear that has been found, a small goat or a piece of meat will be paid as finder's reward). Otherwise the finder keeps it and it is up to him whether or not he ever returns it. If a stolen article is sold, the buyer becomes the owner, while the person stolen from has to look to the thief for compensation. Even up to 30-40 years ago ivory that was found was heedlessly left lying. Then the Masai learned to appreciate its value from the caravans coming from the coast, and it became customary that, of the two tusks of an elephant that was found, one belongs to the finder, the other belongs to the members of his lineage living in the vicinity and known to the finder. The division among the latter takes place through the exchange of the tusk for livestock with an ivory buyer. Among themselves the /[illegible]/ Masai barter only livestock for livestock. A small cow is paid for with a fat ox for slaughter. In former times, before the rinderpest, when the people still had huge cattle herds but few donkeys, a donkey cost two small cows, whereas now, since the caste has changed, it is paid for with five goats. A fat goat or a sheep is bought for a male calf two to three months old. In trade with caravans, etc., people regard as trade articles, besides livestock, especially wire of iron, brass, and copper, glass beads, such as have already been mentioned in the enumeration of the ornaments, and, more recently, here and there, also colored cloth, especially the cotton fabrics known by the Swahili /Swahili/ names *[illegible]*, *kangas*, and *guani*. The Masai

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

Some old men and women chew tobacco mixed with salt and Guinea maize, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and less grain.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not cave for their calves. These and old or lean goats and sheep are the only animals they part with.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-mare and Ke-jei.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[1] This custom is also common among the Bari (Kuchamen, Ashkarempt, p. 190).

[2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-dunat lor-'ag-nyok, the eye medicine.

[3] The Masai obtain their honey by following the Cuculus indicator bird.

Ill. 5. Small pen on the hut.

What is not used in her own household in the way of milk, cream, and cheese /Nos. 10 and 11 appear here/ /10/ is her housekeeping money, with which she buys vegetable foods and such household objects as she does not make herself. She is not supervised in this in any way by her husband. It is beneath his dignity to interfere in these affairs.

Approximately every three to six days caravans of old women, accompanied by a few old men and laden with maize, bananas, beans, etc., arrive in the inner kraals. These there begins an hours-long haggling and bargaining with the customary market-woman shouting. Each one tries to sell her goods as advantageously as possible, that is, exchange them for just the articles that she needs. Often the caravans come from a distance of four to five days' march and then remain in the kraal for a couple of days before they set out for home.

[illegible]
[illegible]
[illegible]

L. S. B. Leakey.—Some Notes on the Meru of Kenya Colony.

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is often drunk fresh or is curdled by mixing with blood, or is curdled sour by leaving for two or three days.

Building.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another sub-class in order to repay a murder (see Murder), all captured blood, and otherwise damaged cattle are returned immediately afterwards, for to keep them would certainly bring bad luck on the raiders.

Part II.—Miscellaneous Items.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a live fire made borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks.

Murder.—Should a man kill a member of his own sub-class there is no punishment. "What would be the use of taking a fine from man's own sub-class?" If, however, a man of another sub-class is killed, then the sub-class of the murderer and the murderer's sub-class and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-class is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blood and raised cows are returned next morning (see Raiding, above).

Smiths.—Among the Meru smiths are considered "bad." There are smiths in each class, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary warriors or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Meru if he so chooses, but never a smith.

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). Smiths may only marry with smiths' families. No Meru would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Meru, but not vice versa), nor can a smith marry an ordinary Meru girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Meru buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock.

/[illegible]/
so that it was taken as a tribal name, and people spoke of el ulad-Maasai and el ulad-Wakuafi. El ulad (sing. el uladuai) means fellow, rough, brutal persons, and is an invective with which the Wandorobo, Wakuafi, and the Maasai Maa-speaking (el kamasai) designate their opponents, the Maasai. Fischer mistakenly translates the word as "owners of the land": this, however, would be called el ngiti i el gik.

The Wakuafi live in their colonies as more or less peaceful, sedentary cultivators. Wherever they found peaceful neighbors after their defeats, they too became calm. On the other hand, where they remained in close contact with the Maasai and were exposed to their constant raids, the old bellicosity revealed in them. An example of this is the population of Nandeng /Nd. Maasai/ in the Great Ngorongoro /Kraka/ and Maru areas. In spite of a very considerable mixture with Wadabaggo from nearby Kilimandscharo, they have completely kept their original character traits. Their superiorness, capacity, and cunning equal that of the Maasai in revenge, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakuafi and Maasai is in general not bad. The latter regard the former as fellow tribesmen, even though as inferior ones, because they work the soil and own only a little livestock. They are foes one minute and friends the next! And both must always reconcile themselves to each other, for the Maasai cannot do without them as suppliers of vegetable foods, after the rinderpest at the end of the eighties again raged so destructively among their herds.

While among the Wakuafi one can still clearly recognize their one-time power and greatness, this is no longer the case at all among the Aai. Most of them, just like the El ulad, timidly and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they kill with poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild berries, roots, and herbs. Where they dwell in the vicinity of the Maasai, they live in a certain

/Kik cont./
393 already been discussed elsewhere (5).

1. Cf. Bad Part. II. IV. XX.

All disputes arising in this connection are settled by the head of the family without formal procedure.

421 The property rights are little developed. There are no provisions with reference to landed property. The pasture land of the district is the common property of all its inhabitants. The plains are so large that there is more than enough pasture for everyone's herds. Property belongs to a single individual, not to the family jointly.

425 A lost article, if the loser lives in the vicinity and is known, will be returned for a reward (for example, for a spear that has been found, a small goat or a piece of meat will be paid as finder's reward). Otherwise the finder keeps it and it is up to him whether or not he ever returns it. The smiths [1].

All Masai do not know how to make spears and swords; this is the work of the smiths. It is they who make the weapons, and the others purchase from them.

The smiths use in the forge a stone, a hammer, pincers, and bellows, and they make needles, bracelets, axes, anklets, weapons, and other things.

The iron which they work with they purchase from the Swahili, or they smelt the ore which they find in the bed of the Matapato river.

Every clan has its smiths; but there is one clan, the Kipuyoni, to which most men of this class belong.

The other Masai do not marry the daughters of the smiths, for it

564 [1] The Kunono and Dorobo seem to hold much the same position among
171 the Masai as the Tumalods (smiths) and Ramis (hunters) among the Somali. No free Somali enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumalods are spread over the whole of Somaliland as the Kunono over Masailand, and no instance is known of them giving up the trade. Still more debased and poorer are the Ramis, who, like the Dorobo, live by hunting game. Cp. Ratzel, *The History of Mankind*, vol. ii, p. 494.

is not considered correct. The smiths marry amongst themselves. 326 564

If a Masai takes in his hand a spear or sword or other thing which a smith has held, he first of all oils his hand for it is considered improper for him to take it in his bare hand. [576]

The smiths are not rich in cattle like other Masai. They have no luck with cattle. If you find one possessing forty head, it is a very large number. [233]

The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of them can speak this language: it is only a certain number of them who know it. [198]

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savages. 323 [439]

Gourds are also bought, or they are collected in the deserted kraals. [415]

One pot can be purchased for a goat. [435]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles[1] by which they can be picked up.

When warriors go to the woods to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles[2]. [482] [237]

January, 1918, when it was decided that the introduction of the tax should be postponed and Mr. Bowring recorded his opinion that it would not be convenient again to consider the matter until after the war, or, at least, until it became possible considerably to increase the number of administrative officers in the Masai Reserve. 648*

SECTION 9.- TRADE.

The Growth of the Cattle Trade Trade in Imported Goods Somali Cattle Trade in the Southern Masai Reserve.- Report by Mr. Bowring, Mr. McMillan and Lord Delamere, December, 1912 --Restrictions on the entry of Cattle into the Masai Reserve Itinerant Native Traders in the Masai Reserve Temporary Occupation, Licences Mr. Hemsted's views: Establishment of Trading Centres: April, 1914- Mr. Steely's views Establishment of Trading Centres: July, 1914 Cost of erection of dips Mr. Hemsted's proposals approved Military requirements The closing of the Masai Reserve to trade -Military restrictions removed- "Gazette" Native or trading centres in the Masai Reserve Plot holders permitted to sell cattle for cash in the Masai Reserve--Itinerant trading Mr. Hemsted's views Mr. Ainsworth's suggestions Mr. Hemsted's comments Further trade centres granted No modifications made Mr. Hemsted's suggestions for granting townships Further trading centres granted. COO

As might be expected in the case of a pastoral and conservative tribe, such as the Masai, the years following the establishment of an administration sufficiently powerful to prevent recourse being had to raids as a successful means of augmenting their flocks and herds were employed in cattle trading on a large scale in both the Northern and Southern Reserves allotted to them. Cattle trade in the Southern Reserve was mainly in the hands of individual Somalis in small numbers, but the Northern Reserve formed one of the main markets in the Protectorate for all classes of Somalis who, bringing Somali and Boran cattle from the north, visited that territory on their way south and generally succeeded in advantageously disposing of all they took with them. The growth of the cattle trade 648* 439

European and Indian traders do not appear to have made any efforts to establish a trade on Laikipia, but a number of shops were opened by such traders in the Southern Reserve, on the Uaso Nyiro and at Ngong, during 1900 and the following years, and by the end of 1911 a flourishing but somewhat loosely controlled trade had sprung up, the Masai showing an increasing tendency to purchase imported articles and farinaceous foodstuffs. Trade in imported goods

In the extended Southern Masai Reserve a check occurred in the increase of trade during the course of the Masai move in 1912, and it was decided that no more permits to erect shops in that area should be issued until the move had been completed.

The advisability of allowing Somalis to carry on an unrestricted cattle trade in the Masai Reserves first engaged the attention of the Government early in the year 1912, when it was pointed out by the Provincial Commissioner, Naivasha, that by the importation of new stock, the already well-stocked grazing grounds were tending to become inadequate for the needs of the tribe, and also that by the provision of facilities for the exchange of sheep for breeding cattle, the encouragement that was being given to the Masai to sell their surplus stock was largely discounted. It was reported that from the Kitui and Machakos districts alone some 3,000 breeding cows had been exported to the Southern Reserve in the last quarter of 1911. As against these figures Mr. Hollis mentioned that, whereas one head of cattle consumed as much grazing as seven sheep, the Masai were willing to exchange thirty sheep for one heifer and that, in consequence, there was a considerable saving in grazing ground on such an exchange. This trade also was largely instrumental in ensuring a regular supply of mutton in the Protectorate and it was therefore decided in March, 1912, that no restrictions should be placed on cattle trading in the Southern Masai Reserve. Three months later this decision was temporarily modified by forbidding the issue of permits to trade in livestock in the Masai Reserves near the routes by which the Masai were travelling, while the move was in progress, but no restrictions were placed on the trade in the Ngong district. On the 1st of September, 1912, the Northern Masai Reserve was closed Somali cattle trade in the Southern Masai Reserve.

*648
439

to cattle trading on account of outbreaks of rinderpest and pleuro-pneumonia and it was decided that this trade should not be reopened until after the Masai had settled down in the Southern Reserve.

In November, 1912, Sir Henry Belfield raised the question for further consideration, it having been represented to him that the unrestricted touring of native reserves by itinerant Somali cattle dealers and the bartering by them of female stock for oxen was likely to be detrimental to the future of the tribes, more particularly the Masai, as tending to encourage their already too prevalent inclinations to increase the numbers of their herds and thereby placing a serious obstacle in the way of efforts to induce them to engage in trade and agriculture. It was his impression that it would be good policy to prohibit these traders from entering the reserves and to compel them to effect sales of stock, as opposed to barter, only at recognised trading centres. It would be impolitic to prevent the members of a tribe from purchasing in such markets, but they would not be encouraged to do so and there would be less inclination on their part to buy than was the case when the cattle were brought to their doors.

Report by Mr. Bowring, Mr McClellan, and Lord Delamere, December, 1912.

The Chief Secretary discussed the matter with the Provincial Commissioner, Naivasha, and later with Lord Delamere, and a joint report was submitted on the 23rd of December, 1912. The argument put forward was that the procedure of allowing Somalis and other traders to enter the reserve with cattle for trading purposes would hasten the day when the reserve would no longer be able to accommodate the cattle, and that this procedure kept up the price of cattle to such a figure that it was unremunerative for European farmers to purchase them. Even if no more cattle were allowed to enter the reserve, it would not be long before it became over-crowded, but it was desirable for political reasons to postpone that day as long as possible. In their report they recommended that the Masai should be encouraged to purchase cattle and sheep for cash, but added that there seemed to be no objection to livestock being obtained from the tribe in exchange for trade goods. They were opposed to livestock being allowed to enter the reserve for trade purposes and recommended prohibition of such importation. They saw no reason why the Masai residing within the reserve should be allowed to leave the reserve for the purpose of acquiring more livestock and they considered that any Masai who left his reserve to work and who expended his earnings in purchasing cattle or sheep should be allowed to take them back to the reserve with him. The desire to possess livestock being the only incentive for the members of this tribe to work for wages, they feared that unless the workers were allowed to spend their wages in the purchase of livestock, they would not go out of the reserves, with the result that there would be a dearth of reliable herds. In addition, they suggested that the Masai could well afford to pay a tax on their livestock and considered that such tax should be collected in cash, thus necessitating the sale of stock in order to obtain rupees. The Masai Reserve would thus become a source of supply for the settled areas of the Protectorate.

In short, they recommended that cattle and sheep should be allowed to leave the reserve freely (subject to any veterinary regulations) but that none should be allowed to enter the reserve except on certificate from an European employer to the effect that the individual importing them had earned the wages with which he purchased them.

Restrictions on the entry of cattle into the Masai Reserve.

Sir Henry Belfield expressed himself generally as in agreement with these views, but decided to postpone consideration of the proposals for the imposition of a cattle tax until the Masai had settled down. After consideration in Executive Council, he directed that passes to leave the reserve should only be issued to those whose intention it was to look for work, and that the certificate recommended as a condition under which cattle and sheep could be taken into the reserve should not be insisted on. Rules were accordingly issued under the Outlying Districts Ordinance, 1902, to the effect that no licence would be granted to any persons to enter the Masai Reserve, except subject to the condition that the licensee would not take or allow to be taken into the reserve any cattle or sheep and that such condition should be endorsed upon every licence granted in respect of the Masai reserve.

This notice was subsequently cancelled (*vide* p. 95).

648*
439

In May, 1913, it was decided to enforce the stipulation that no Masai be permitted to take stock into the reserve unless that stock had been purchased with wages earned and that no permit be issued in respect of such stock unless the stock were the property of the applicant.

Itinerant Native traders in the Masai Reserve.

In October, 1912, certain European plot-holders in the Masai Reserve complained of the itinerant trade carried on by the Kikuyu with the Masai. Four isolated shops, three European* and one Indian, existed in the South Masai Reserve, but these catered only to a limited extent and in certain limited areas for the wants of the Masai, and there was therefore scope for the itinerant native trader who would supply the goods required by the Masai at a less exorbitant price in exchange for sheep and skins. As it was part of the general policy to encourage the demand for trade goods on the part of the Masai, the Provincial Commissioner recommended that itinerant trading of cash or trade goods against sheep or cattle be permitted without restriction but that no cattle be allowed to enter the reserve for trade purposes. After a trial extending over a period of five months, he found himself unable to recommend the continuance of the system, which was creating a lazy type of Kikuyu who would buy sheep in large numbers in exchange for tobacco. In September, 1913, Mr. Hemsted represented that such trade supplied a much-felt want by enabling the Kikuyu to purchase sheep from the Masai and tending to make the former more industrious. Further, under the terms of the agreement of 1911 between the Masai and the Government, the latter had undertaken not to permit any person other than a member of the tribe to occupy land within the reserve, except with the consent of the Masai and as the "Masai case" was then before the Courts, Mr. Hemsted found it impossible to open trade centres as Legalishu, contending that this agreement was invalid, refused to sign any document in respect of the leasing of areas in the reserve, fearing that such a step might be construed as an acknowledgment of the existence of the treaty and might jeopardise his claim to Laikipia.

Under these circumstances, therefore, the Governor saw no reason to suppose that this trading was likely to be productive of anything but benefit to both parties. At the same time, he asked the Officer-in-Charge what was the extent of the legitimate requirements of the Masai and whether it would not be advisable to limit the number of trading licences in proportion to those requirements. To this Mr. Hemsted replied that there was no limit to the amount of the flour, tobacco and trade goods which the Masai could absorb, and as the established merchants at the time were incapable of coping with the demand, he proposed to place no restrictions on the number of natives entering the reserve for the purpose of such trade. These proposals were approved in October, 1913.

Temporary occupation licences.

In that month, owing to the refusal of certain Masai to attach their signature to agreements in respect of trading plots, the temporary occupation licences of two of the plot-holders had to be cancelled at three months' notice. The Masai were somewhat nervous that the conditions of the treaty would not be strictly adhered to and feared that they might be deprived of certain grazing lands. The action of one of the plot-holders in utilising a considerable area of land round his store as grazing ground for his own herds did not tend to lessen their anxiety in this connection.

With the Masai adopting this attitude, the Governor thought that it would be unwise to recognise any agreement with the chiefs until the litigation in respect of Laikipia had been concluded. While, therefore, he considered that the business carried on by these traders was advantageous to the Masai and should not be disturbed without strong reason, he was of the opinion that no document of any description should be given them in respect of their temporary occupation, but that they should be permitted to occupy such small areas as might be necessary for their trade, on the understanding that they had no rights in those areas and were liable to removal at any time.

* Messrs. Judd, Aggett, and Van de Weyer on temporary occupation licences.

*648
439

In May, 1914, Mr. Hemsted represented that the practice of allowing traders to squat at various places in the Reserve or to travel at will therein was far from satisfactory. It rendered the enforcement of veterinary regulations difficult and was deprecated by the better class traders themselves as rendering the erection of permanent stores and dwelling houses an unprofitable proceeding. The Masai, he said, could never be developed on civilised lines if a measure adopted for their own good fell through owing to their inability to understand the nature of an agreement or because of their intense conservatism. He therefore asked for permission to gazette certain trading centres without having a formal agreement in writing, except as regards the Ngong District. His proposals were, however, regarded as premature pending the conclusion of the litigation.

Mr. Hemsted's views—Establishment of trading centres—April, 1914.

On the 10th of April, 1914, Mr. Hemsted advocated the adoption of a far greater measure of control over stock trading in the reserve. The arrangement of allowing itinerant traders rendered difficult the enforcement of veterinary regulations and several cases had recently occurred in the neighbourhood of Naivasha where the farmers' flocks had been infected with scab caught from sheep passing from the Masai Reserve. It was impossible thoroughly to inspect the tens of thousands of sheep that passed out. The Chief Veterinary Officer had advocated the erection of dips at the main trade exits, where all stock destined for other parts of the Protectorate might undergo a period of dipping, but Mr. Hemsted considered that the consequent delay, the necessity for providing superintending veterinary officers, difficulties in obtaining food, the erection of accommodation and the hindrance to trade caused by limiting the number of exits would make the system so inconvenient as to stifle business.

In place of this system he suggested the entire prohibition of itinerant trading, both white and black, the establishment of trading stations at various parts of the reserve, the erection of a dip at each trading station and the compulsory dipping of all animals intended for removal outside the reserve. Owners of plots were to have the monopoly of exporting stock. The advantages of this system were that trade would be restricted to well-known and probably substantial merchants who would be unwilling to run the risk of evading the regulations. They would be able to carry out the necessary dipping with a minimum of inconvenience in the vicinity of their own stores and the sheep would be in a better condition for the market. Resident storekeepers would be able to remove their stock by any route open to them without risk of carrying infection, and the dips would also be available for the Masai if they cared to use them or if dipping were made compulsory. The sheep trade with the Masai was, he said, capable of great expansion.

Mr. Stanly's views, June, 1914.

The Chief Veterinary Officer discussed the matter with certain administrative officers at Naivasha and his views were embodied in a letter dated the 11th of June, 1914. The regulation published in February, 1913, forbidding trade in livestock in the Masai Reserve and restricting the entry of cattle was open to abuse and was, in itself, a dead letter, as it was not possible to prevent such trading and the surreptitious movement of stock. The regulations had been of an administrative nature, as no veterinary objections existed to the trade and there were considerable differences of opinion regarding the best policy to pursue in the matter. Apart from the question of the development of the Masai, the interests of European cattle owners and sheepmasters were involved. The former would urge that if trading of cattle in the Masai Reserve were allowed it was impossible for them to obtain stock, as cattle in the open market would rise to a prohibitive figure, it being a more remunerative business to exchange cattle for sheep and goats with the Masai. On the other hand, the sheepmaster had need of native ewes, of which the Masai possessed some two millions and the supply of which was cut off if the Masai Reserve were closed to the entry of cattle, as it was only by such barter of stock that the Masai could be induced to part with their sheep in any numbers. Further, such sheep had proved to possess valuable qualities as resisters of both external and internal parasites and to be a cheap and accessible foundation for sheep flocks of both woolled and mutton types. Mr. Stanly pointed out that cattle were required by the great majority of farmers, whereas the settled areas suitable for sheep were practically confined to the Rift Valley

Reserve to ensure supplies of beef and mutton for the troops, arrangements were made in September, 1914, for trustworthy Somalis to exchange, on permit, cows and heifers for sheep and bullocks in the reserve, subject to restrictions limiting the number of cows imported to thirty-five head per journey and regulations necessitating the sale to Government of the stock so obtained at Ngong station. The price for sale to the Military Authorities was fixed at Rs. 4–5 per sheep and Rs. 30–50 per bullock for a beast of about 350 lbs. killing weight.

The Closing of the Masai Reserve to trade.

In August, 1915, instructions emanated from the Secretariat prohibiting until further orders the issue of permits to enter the Masai Reserve, while all Somalis then in the reserve were to be removed before the end of September. Such a step was necessitated by the military situation and the food requirements of the troops were met by authority to commandeer stock from the Masai for cash.

In October, 1915, it became necessary for the General Staff to order the closing down of all trading centres situated within twenty miles of the Anglo-German border, while at the same time all traders were prohibited from entering that area. In January, 1916, further restrictions were enforced and traders were excluded from the district east of the Mara River which had not previously been closed. This order was subsequently modified to permit trading in established centres north of the Kijabe-Mara cart road, but with a total prohibition on itinerant trading.

Military restrictions removed.

The trading centres which were thus closed to Indians, Somalis and Swahilis comprised Mara Bridge, Sianna, Narosura, Endasegera, Gelegele, Mogor, Bardamat and Ol-Orokuti, all of which were within forty miles of the boundary, but in response to Mr. Hemsted's representations, the Military Authorities permitted the opening of these stations in July, 1916, on the understanding that no undesirable person should obtain a plot and that the prohibition on itinerant trading should remain in force.

"Gazette" notice re trading centres in the Masai Reserve.

On the 8th of December, 1915, a schedule of trading centres was published in the "Official Gazette." The Notice read as follows :—

"The Government of the East Africa Protectorate with the consent of Segi, Engaroya, Saburi, Marmori, Langiri, Agali, Ole Yeli, Ole Naigina, Ole Gesheyan, Ole Matipe, Ole Nakola, Ole Kotikosh, Ole Batiet, Ole Turere, Ole Masikonti, Ole Gelishu, Ole Malit, Ole Tanyai, on behalf of the Paramount Chief and the representatives of the Masai tribe is prepared to grant occupation rights within the outlying district known as the Masai Reserve in centres the names situation and areas whereof are specified in the Schedule annexed hereto on the terms and conditions following :—

"1. Plots of 2 acres approximately.

"2. Rental per plot per mensem Rs. 12.

"3. Separate plots for Europeans, Asiatics and Natives.

"4. Plots will be let under annual occupation licences.

Plot holders permitted to sell cattle for cash in the Masai Reserve.

648*
439
366

In view of the fact that cattle were being commandeered from the Masai and bought for cash, the question of the advisability of permitting the Masai to purchase stock with cash so obtained was brought forward by Mr. Hemsted in February, 1916. He represented that new blood would be beneficial and that the small numbers of cattle so purchased would not materially affect the situation and therefore he recommended that established traders be permitted to bring cattle to their stores for sale to the Masai for cash. The Governor approved this measure but considered that it would be a good thing if it could be arranged that the opportunities given to the Masai for purchase should be limited to higher grade cattle to the exclusion of native stock. The Rule under the Outlying Districts Ordinance, dated the 4th of February, 1913 (*vide* p. 91), was therefore cancelled by Rule in the "Official Gazette" of the 1st of March, 1916.

Itinerant trading. Mr. Hemsted's views.

In October, 1916, Mr. Hemsted submitted a comprehensive memorandum on the policy which should be pursued in regard to itinerant trade in the Masai Reserve. He deprecated any policy of throwing open the reserve to unrestricted itinerant trading. A large business had been built up by the better class of merchant at the trading centres, by which the requirements of the Masai had been greatly augmented and had to a very considerable extent been met. Itinerant trading would force these men to adopt similar methods and would lead to the discontinuation of trade centres. The Masai would be content if articles were brought to their doors and would never visit the centres, thus losing touch with outside influences and with the benefits accruing from competition between merchants. The question also affected the labour market, as thousands of Kikuyu would prefer making a livelihood by barter with the Masai to working for wages. The system of trading centres had proved both beneficial and acceptable to the Masai who appreciated the cheaper rate at which they could obtain goods, while they had found from experience that the system of itinerant trading led to many cases of theft or alleged theft.

The result of the establishment of trading centres and of the exclusion of the itinerant trader had been the establishment of shops by more than one hundred and twenty merchants in the Narok and Mara districts alone and the Masai had asked for eight more centres in these districts. Trade had been almost at a standstill in the Ngong districts, where there were only three trade centres, but the opening of

*648
439
366

twelve more had recently been asked for and Mr. Hemsted anticipated that there would shortly be from 250–300 plot-holders in the reserve if the present system was adhered to. Masai funds would therefore benefit to the extent of two or three thousand pounds a year from rent of plots.

Mr. Ainsworth's suggestions.

Mr. Ainsworth, to whom the memorandum was referred, considered that a system of monopoly would not achieve progress and that the confinement of trade to plot-holders was undoubtedly such a system. The conservative ideas of the Masai would, he thought, be more rapidly changed by encouraging the greater freedom of trade. Plot-holders would benefit by any increase in the cattle trade on a cash basis, particularly if the itinerant cattle trader was confined to making purchases for cash. Mr. Ainsworth accordingly suggested, for adoption as Government policy, the commencement as soon as possible of a property tax on the Masai, the prohibition of barter of stock except as between Masai and Masai, the encouragement of the erection of permanent houses by the chiefs and principal elders, restrictions on the importation of cattle into the reserve, the establishment of stock markets at trade centres at which cash sales should be enforced and the confining of itinerant traders to the various markets. Itinerant traders should only be permitted to enter the reserve on passes from District Commissioners and natives of other tribes should only be allowed in the Masai Reserve for limited periods unless properly employed by non-natives. Finally, he recommended that a schedule be drawn up of improvements necessary or desirable in the interests of the Masai and that the Masai be invited to associate themselves with such improvements and make an annual contribution towards their being undertaken.

Mr. Hemsted's comments.

Mr. Hemsted, in commenting on Mr. Ainsworth's suggestions, remarked that it appeared improbable that the Masai would ever develop into porters or agricultural labourers and that the only feasible policy appeared to be to develop them as stock breeders, in which capacity they would be a far greater asset to the country. Their ideas were already changing. About 20,000 bullocks and 180,000 sheep had been provided for the military authorities and forty-four trading centres had been set apart, wherein some two hundred plots had been leased on temporary occupation licences. Trade in the Masai Reserve was greater in proportion to population than in any other part of the Protectorate. He recommended that the introduction of cattle into the reserve should be unrestricted. The natural increase of the Masai herds approximated 90,000 per annum and the number introduced from outside would be negligible in comparison. Moreover, new blood was beneficial and the Masai stock was deteriorating owing to in-breeding. The necessity for supervision would render difficult and expensive any system whereby itinerant traders, as opposed to plot-holders, were permitted to sell in open market even at trade centres, and he hardly thought the policy of compelling traders to sell for cash to be practicable.

Further trade centres gazetted.

Two notices published in the "Official Gazette" of November 22nd, 1916, indicated the opening of twenty more trade centres in the Masai Reserve. The Notices read as follows:—

"The Government of the East Africa Protectorate with the consent of Segi, Engaroya and Ole Galishu, on behalf of the Paramount Chief and the representatives of the Masai tribe is prepared to grant occupation rights within the outlying district known as the Masai Reserve in centres the names, situation and areas whereof are specified in the Schedule annexed hereto on the terms and conditions following:

"1. Plots of two acres approximately.

"2. Rental per plot per mensem, Rs. 12.

No modifications made. February, 1917.

The question of the advisability of once more allowing free entry of cattle into the reserve was discussed in Executive Council, on the 28th of February, 1917, when it was decided that no interference with, or modification of, the existing arrangements was desirable.

Mr. Hemsted's suggestions for gazetting townships.

In October, 1917, Mr. Hemsted made proposals with a view to the regulation of trade in the reserve, and to the granting of facilities to persons, other than the licensed plot-holders. He suggested that all trade centres be declared townships, with markets declared therein and rules applied, and he proposed that no trading should be permitted except at the gazetted trade centres. He contended that the bringing of the Masai into touch with outside influences, the benefits of competition, the encouragement induced to place trade on a cash basis, and the assistance which would thereby be given to the native labour supply, were advantages which might be claimed for this system, while it would also be more practicable to enforce the veterinary regulations. The Masai, as well as all traders, except some Somalis, were in favour of confining trade to the trade centres. No fees would be charged to persons buying in the centres for cash only, but a schedule of fees for licences and of market fees was suggested.

The question was considered in Executive Council, of the 12th of January, 1918, when the consensus of opinion was that matters should remain as they were. The Officer-in-Charge, who was present during the discussion, did not wish to press his recommendations.

Further trading centres gazetted.

Five additional trading centres were opened by notice in the "Official Gazette," of January 30th, 1918. The notice read as follows:—

"The Government of the East Africa Protectorate, with the consent of the Paramount Chief, and the representatives of the Masai tribe, is prepared to grant occupation rights within the outlying district known as the Masai Reserve, in centres, the names, situations and areas whereof are specified in the Schedule annexed hereto, on the terms and conditions following:—

"NAIROBI,

"Dated this 25th day of January, 1918."

*648 439 103 366

SCHEDULE.

	Name of Trade Centre.	Situation.
1.	Kajiado	Within one mile North of Kajiado Railway Station, on the Magadi Railway.
2.	Nenki	Within one mile North of Nenki Station, on the Magadi Railway.
3.	Namanga	On Namanga water course on Kajiado-Longido road.
4.	Meto	On Meto water course in the Ombogo le Meto.
5.	Ngurumen	At the North-West foot of Ol Doinyo Shombole, on the East Bank of the Gusso Njiro River, shortly before it enters Lake Natron.

NOTE.—The approximate extent of each of the above trading centres is "160 acres within a circle with a beacon as centre."

abandoned, and, though meat and milk were still the main 885
items of his eating, he could now vary it with vegetable food, [262]
obtained by his wife from neighbouring agricultural tribes.
Luxuries, also, he *might now indulge in*. He sported a [276]
fancy snuff-box and tobacco-box of ivory or rhinoceros' horn,
and delighted to rap up its contents as he handed it to a
friend. He chewed tobacco (mixed always with natron),
though he never smoked. Then, as often as convenient, he [273]
liked to foregather with his friends, and have a jolly carouse
over beer or mead.

It is pleasant to know that with this change in his mode 157
of life there was a corresponding alteration (very much for 574
the better) in his views of things. He delighted to talk with 439
the traders whom before he had gloried in killing or annoy- 885
ing, and would in token of good-will cordially exchange the
courtesies of life by spitting upon them and being spat upon.
In his conversation he showed an intelligence far superior to
any specimen of the Bantu tribes. He had no suspicions,
and was communicative about his affairs and beliefs. He
would even at times exercise a friendly guardianship of
passing traders, and was able to ward off many a disaster by
judicious warning. He was not stinted in his presents, and
generally gave far more than he got. He has been known
even to protect strayed porters, and tend sick men left behind

The softening down of his ferocity reacted upon his face. 885
The habitual scowl gradually died away, and was replaced by 771
a more pleasing and genial expression. His thoughts turned 787
more to the strange mystery of life. He, alas! had little
that was cheering to look forward to. He believed in the
existence of a Supreme Being, and yet had not the faintest
conception of an after-life. Unlike the men of the Bantu
races, he did not believe in ghosts or spirits. He had no
theory of dreams, and did not imagine like the negro that
when he dreamed he was really experiencing all that was
passing through his brain, and that his soul or spirit was
actually knocking around somewhere, having a good time of
it, unclogged by his body. Moran believed nothing of that;
indeed, whether he had any idea on the subject, I have not 885
been able to determine. When the man died, he was 761
finished utterly, except so far as he might go piecemeal to
build up the body of a hyena, a vulture, or a marabout stork.
The Masai believe in annihilation. To bury a corpse would, [764]
they think, be to poison the soil: it must be thrown to the
wild beasts without ceremony.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

latter is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uncircumcised boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples. 592 593 462

The only specialists in the economic sphere are the smiths, *il-kunono*, sing. *ol-kunoni*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who oil their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Matapato river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[6] 326 [263] [564]

Though according to Hollis a few Masai women made pottery, the Masai as a rule buy their pots from the Bantu. 323 439

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *ol-esowuan*, and eland, *o-siwa*, which they considered to be related to cattle, and therefore fit to eat.[7] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *ol-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai. 262 [241] [343] [264]

Trade

Since the Masai are not self-supporting, they have to trade with the Bantu agriculturists, *il-meek*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs, 439 [186]

[6] Leakey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 209); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[7] The Galla also consider the buffalo to be the equivalent of the ox. Bahrey, *Historia Gentis Galla*, chap. XX, Guidi.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

439 whose warlike qualities appeal to the Masai. Honey, honey-wine, and ivory are got from the Dorobo. Ivory was used in the old days for trading with the Swahili caravans for cloth, beads, wire, and so forth. Trade outside Masailand is conducted [126] mostly by the women, for by mutual arrangement they were allowed to pass unharmed from tribe to tribe even during the progress of a war.

Hunting

224 Though the Masai do not hunt habitually, and despise those who do, they used occasionally to kill wild animals—elephants for their tusks, buffalo and eland for the meat and hides, ostriches for their feathers, and lion and leopard to protect their cattle.

Labour

46 Although deprived of their only real occupation, fighting, the Masai have not yet as a people accepted any substitute for it, being, as Sandford noted, "too proud to work," i.e., for wages. A small number have accepted employment as herdsmen on farms, and some have done good service in the Police and K.A.R., though even in a military capacity most of them are still unwilling to submit to a form of discipline that is not their own. Though a few have taken to cultivation, the majority have not yet consented to stoop to what they consider labour unworthy of a Masai.

THE AGRICULTURAL MASAI

101 The agricultural Masai, the I-Lumpua (Lumbwa) and Il-Oikop of former days, 175 are people of Masai stock who, having lost their cattle through disease or defeat, were forced to take up agriculture in order to survive, and by so doing earned the [178] lasting contempt of the pastoral Masai. It is in most cases uncertain how long the various groups of Il-Oikop have been agriculturalists; some of the southern Masai, for example, were defeated by the Gogo early in the 19th century and took to agriculture. Fischer in 1882 reported groups of "Wakuavi," as he called them, living on the southern edge of the Mau; at Ndaseriani (Ndare serian), 15 miles south-west of Narosura; in the region known as Nguruman (*in-kurman*, "the farms") for about 30 miles north of Lake Natron; at the southern foot of Mt. Meru; and at Kahe.[8] Von Höhnel adds Ndasekera, 20 miles north-west of Lake Natron.[9] Another group is named by Thomson and von Höhnel[10] at Taveta; while the map in Hollis's *The Masai* shows them as extending for about 100 miles south-south-east of Lake Manyara. The best known, however, are the northern group called Il-Tiamus or En-jemusi (Njemps) near Lake Baringo, concerning whom we have (such as it is) the fullest information.

184 With the exception of the Taveta group, the agricultural Masai in general resemble the pastoral Masai in appearance, dress, and general culture, and though 22 they cultivate the ground, still have the acquisition of cattle as their chief ambition. Those of Taveta have mingled with the Taveta,[11] and have become the most successful cultivators among the Masai; the rest of the agricultural Masai in the days of Thomson and Teleki grew mainly eleusine and millet, while the Il-Tiamus grew also pumpkins, and tried unsuccessfully to grow maize. Most of the agricultural Masai supplemented their diet by hunting, bee-keeping, and, where possible, by fishing.

/6 cont./

174 original homeland, which is to be sought in the northern part of the Arabian Peninsula. Only at the equator did the march to the south stop. Here the Masai found not only steppe regions such as they required for their herds, but also tribes of people such as they needed, as victims of their war expeditions, for their own survival.

000 The agriculturalist finds his sustenance in the soil; the one who carries on agriculture and stock raising finds in the former an adequate livelihood, even during periods that are unfavorable for stock raising, and he can, through the more stable trade relations that he owes to his sedentariness, acquire the new breeding animals that are needed to prevent too extensive an inbreeding of the livestock. On the other hand, a culture-poor nomadic people that lives solely and only from the livestock is in a much more unfavorable position. Merely to protect the herds from degeneration, a constant supply of breeding animals on a large scale is an urgent necessity. Moreover, because of the rinderpest, periodically appearing and in Africa, unfortunately, almost never dying out, and other epidemics, ruin very often threatens the stockbreeder, if in such cases he has no opportunity to replace his losses as quickly as possible and to obtain vegetable food in the meantime. Steppe peoples are aggressive, and for culture-poor peoples in [101] general might always comes before right. There now live in the mountain lands lying on the borders of the steppes, and in the ones enclosed by them, Negro tribes who, in relation to the Masai, held together by firm organization and a high degree of tribal arrogance, and exceedingly mobile, are very immobile, for one thing, but then also are bound together within their own tribes only by a greater or lesser degree of herdlike obedience. They [439] are accustomed to seeing, even in their sedentary neighbors, their born enemies; they live constantly at war among themselves, even in a small space, since often each village is independent, and thus must have been desirable neighbors for the Masai, from whom the latter could at any time obtain both vegetables and, what was of special value, livestock.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandoróbo, who presumably learned the potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[158] healthy people uncooked, as fresh (eṅ gule) or sour (eṅ gule naoto); boiled milk is food for the sick and as such is usually mixed with pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted
[158] state. Milk mixed with fresh or /33/ cooked blood (en jiwōt) is greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[153] (1),
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

/34 cont./

262 Masai only most reluctantly and infrequently sell cow's milk, for
272 the buyer indeed could in the above-mentioned manner make their cows sick with it. The Masai scorn any kind of game meat, as
[136] well as birds and even fish, of the latter of which species of Barbus, Chromis, Clarias, and the sheatfish-like Synodontis occur almost everywhere in larger brooks.

252 The preparation of the principal vegetables is the following:
262 batatas (ol muruṅgu, el muruṅguni -- Ipomoea batatas) are cooked
263 in water with a little steppe salt (e munján), then drained, mashed with a whisk (ol gibere, el giberen), and stirred with fresh milk. The finished dish is called el muruṅguni. Unripe bananas (ol marigôi, el marigo -- Musa paradisiaca) are peeled, cut up, and cooked in water with salt. After they have been drained, a little butter (eṅ gorno) is added. Unripe dried bananas (ol kitâuo, el kitâuón) are cooked in water, drained, and then stirred with milk and butter. Maize kernels (ol baîegi, el baîeg) are cooked in water without the addition of salt. Beans are cooked with salt. One distinguishes ol bombôl -- el bombo (Dolichos lablab), eṅ giú --eṅ giûn (with which both Cajanus indicus and Vigna sinensis are designated), furthermore os sigoriôl -- es sigorio (Phaseolus vulgaris), ol gámuri -- el gámuri (Phaseolus radiatus). Eleusine coracana (en dabá -- 'n dabán, or en drigá -- 'n drigán or also called eṅ guruma -- 'n guruman) and Sorghum vulgare (ol birirí -- el biririn) are cooked to a thick porridge and lightly salted. Dioscorea abessynica (ol geré -- el gerén) and Colocasia antiquorum (which the Masai on Kilimandscharo designate with the Dschagga /Chagga/ word maduma) are cooked in salted water.

Honey (en aischo -- 'n aischi) is eaten unmixed and is also used as an addition to various medicaments. They buy tobacco
276 (ol gumbaû, Nicotiana rustica), which the Masai
[439] consume in quantities, from sedentary Negroes, who put it on the market in loose, bast-wrapped packets (Fig. 4) of various sizes or in the shape of solid balls about five centimeters in diameter.
[415] For the preparation of this, the tobacco leaves, picked ripe, are tightly packed, tied up with

Fig. 4.

/34 cont./

276 other leaves, for example, from the banana, and thus left to ferment for several days. Then they are hung up to dry in the shade or in the hut, and, as soon as they are sufficiently dry, they are packed together in the above-mentioned packets. To make the ball tobacco, on the other hand, /35/ one lightly pounds in a mortar the fermented and dried leaves, after they have been sprinkled with water, without, however, thereby breaking up the leaves. The very moist mass is then shaped into balls, which are left to dry in the sun. The [435] Masai pay a goatskin for two packets of about half a pound each or for ten balls. Only the old people use tobacco. The men smoke, sniff, and chew it, while the women content themselves with chewing and sniffing. The tobacco intended for smoking is coarsely cut. The tobacco pipes (Fig. 5) consist of a thin wooden tube about a foot long (os sarian) and a conically shaped clay or wooden bowl (ol mōti). The latter is carved by the Masai themselves, whereas they buy the clay bowls. For chewing one uses

Fig. 5. (1/2)

[322] [439]

[415] [531]

Fig. 6. (1/2)

the same tobacco and chews it with a little pea-sized piece of natron salt (e magát). To prepare the tobacco for snuff, the smoking tobacco is first cut as fine as possible and then ground to powder with a round stone in a piece of gourd shell. To this one

/35 cont./

276 adds some natron salt and beef fat, frequently also pulverized bark of ol amóra (Ocimum suave Wild.), and mixes the whole by further grinding. [415] Small boxes (en dulet -- 'n duleta) [237] made out of wood, bamboo, cattle [531] or sheep horn, or even out of the [136] horn of the Rhinoceros bicornis, which often are quite attractively carved and decorated with beads, [273] serve as snuffboxes (Fig. 6). They [415] are worn around the neck on thin chains made out of iron wire.

Fig. 7. (1/10.) Vessel for the preparation of honey beer.

273 Another luxury, also intended only for married men, is a kind of honey beer (en aischo namga) (Fig. 7). One dissolves honey in [824] water and adds a piece of the root of the steppe aloe, os sugurôl, /36/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1)

1. Named after the resemblance of the fruit to a liver sausage.

(ol darbôl -- Kigelia aethiopica), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity [824] of the hearth fire. Before it is drunk, one often puts in a few bunches of leaves from the ol gonjet bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete drunkenness. Other brews, which the sedentary Negroes bring to [439] the Masai for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The Masai do not distinguish these with names, but rather call them generally ol márua.

/102 cont./

728 648 lasting conclusion of friendship between Europeans and Masai as completely impossible, both on the basis of an experience of almost eight years and also according to the statements of a large number of Masai, who, in the course of a long personal acquaintance, gained so much confidence as to express themselves frankly about this point. [829] According to their view a friendship, in whatever form it might be concluded, would only ever have the result that individual persons in the service of the Europeans concerned would find a hospitable reception in the Masai kraals. It could no more bring about a lasting friendship than it would induce the Masai to follow the orders and the laws of the Europeans.

[439] On the other hand, if the Masai seriously mean peace because the tribe warred upon lives close to them and they are dependent on it for buying vegetable food there (as, for example, in the above-mentioned Kahe), they make an ertana etabaschage ñ gera = suckling of exchanged children. After they have sent off an old man, as before, and he has returned together with a few foreign old men, it is agreed in consultation that the Kahe chief, a Kahe woman with a suckling child, and a number /103/ of witnesses should come to a certain designated place in the steppe between Kahe and the Masai kraals. At the appointed time, there will also be found there a woman from the Masai (not a true Masai, however, but one from another tribe captured in a previous war) with a suckling child, as well as the speaker, the leaders, and other warriors as witnesses. The two women now exchange their children, and each puts the foreign child to her breast for a moment. They then take the children on their backs in the leather apron and conclude blood friendship with each other. One of the witnesses makes a few incisions in the skin of the abdomen of each of the two women and hands her a small piece of the heart of a just slaughtered head of livestock. After each one has wiped off the blood coming out of her cut with this, she sticks it in the mouth of the other. While this ceremony is going on, the speaker and the chief of Kahe affirm eternal friendship in the name of their people; they call upon God as their witness and pray to him that he might exterminate them if they do not maintain the friendship. Every conclusion of peace has as its consequence the obligation for mutual hospitality.

/116 cont./
306 the wives of the blacksmiths. Smaller ornamental objects of wire
301 are made by the other Masai women. The small chains of iron and
325 copper wire are not made by the Masai themselves, but are bought
[462] ready-made from the caravan people or the sedentary neighboring
[439] tribes.

XIV.

000 Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Masai in the service of the European. -- Attitude of the Masai living among his people toward the European. -- The Masai toward their kind. -- Hospitality -- Position of the woman. -- How the Negro illustrates the character of the Masai. -- Expression of emotions and other gestures. -- Strength of vision. -- Art sense. -- Color sense. -- Orientation ability. -- Song. -- Ideal of beauty of the human body.

186 The most outstanding trait in the character of the Masai is their
779 national pride which is based on the religious view that they are the
829 chosen people of God. God created the world and all that is in it
[181] only for them. All non-Masai are subject to the Masai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with 'Ng ai and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the
[461] soil in the sweat of work. On the other hand, God cares for the Masai as for his children, they need not work: "eñ dobira mēti sidai = work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Masai take it by force. In fact, the Negro, in the opinion of the Masai, only has justification for existence as keeper of the livestock created by 'Ng ai for the Masai.

186 In general the Masai designates all non-Masai as el meg (sing. ol meggi), a term that is to be translated as "unbeliever." /117/ The Masai does not know friendship and loyalty toward the

/127 cont./

411 polished, seldom unpolished and black. The latter is not a sign of crudeness, but is supposed to prevent gleaming in the sun. The [439] spears carried by the Masai are not all made by the el konono, but [177] are also /128/ bought from sedentary Negroes, and, to be sure, chiefly from the Wadschagga of the Kilimandscharo, whose black-smiths make them for the warriors of their tribe or also on order for [177] Masai warriors. One therefore finds among the spears of the Masai

142
301
302
411

Ill. 42. Young Masai with spear. Müller phot.

/134 cont./

411 [136] [237] flocks in the branches of the trees surrounding the kraals, waiting for some kind of animal waste. In addition to the iron points, one also finds awl-shaped wooden points; the latter are often poisoned, the former only rarely. The Masai do not make the poison (en duerai) [439] themselves, but buy it from Wandorobo, who obtain it from /135/ the olmoridjoi (Acocanthera abyssinica) tree by boiling the roots and the wood. The arrows are carried in a leather quiver (e modian, modiani), which is slung over the shoulder on a leather [237] strap. It consists of a tube 70 centimeters long and made out of neat's skin, with a bottom stitched in and a similarly worked, twelve-centimeter lid that can be turned up high.

Firearms, which at times almost entirely replaced the spears and bows among sedentary Negroes (1),

1. For example, in a few areas at Kilimandscharo.

[648] [727] are not generally carried by the Masai. Although in the battles with the Protectorate Troops they have at various times captured guns and ammunition from fallen Askari, I never observed or learned that they used these weapons. They never bought muzzle-loaders from trade caravans, and the ones that I found in one of their kraals showed by the lack of cock or piston, or by other damage, that they were not carried along by the Masai for the purpose of use, but merely as trophies. It was not until April, 1902, [177] that a troop of Masai warriors armed with English Snyder breech-loaders came into my field of observation. The troop came from the Masai province of Ol bruggo, and, to be sure, from the English station of Nairobi, located on the Uganda railway, and attempted an invasion in the Kilimandscharo area of Rombo. With a loss of approximately 20 per cent dead and bootyless, however, they were sent home by the Warombo, armed only with spears.

000 Clothing and adornment. -- Cloth materials. -- Leather dressing. -- The individual articles of clothing. -- "Beautifying" the body, head hair, beard, body hair. -- The hair style of the warriors. -- Painting of the face and body. -- Caustic and incised decorative scars. -- Teeth. -- Fingernails.

29 177 [439] Cloth materials, such as the caravans from the coast engaged in the ivory trade in the Masai steppes take along trade goods, have not yet ever really succeeded in being adopted among the Masai.

For the trade this is, of course, regrettable, but for one who comes into frequent, daily contact with the people it is really fortunate, for there is scarcely an uglier and more repulsive sight than a native decked out as completely as possible in European clothing, especially if one sees him thus amidst his fellow tribesmen in their traditional garb exactly suitable for them. Not only is the eye offended, however, but also the nose and further many another. One should merely consider that the people have never learned how to manage with such clothing and that generations will pass before its use has to a certain extent become part of their flesh and blood. [296] /136/ A cleansing of the things therefore does not occur and likewise the regular drawing off and on. The native hangs on his body whatever he gets and keeps it on until it falls off by itself, so to [515] [147] speak. Naturally he always stinks and as a rule also harbors all kinds of vermin. One day I met with a European caravan a Masai youth whose former master had departed some six weeks previously and, upon leaving, had given him a pair of shoes. The boy told me quite innocently that he had put the shoes on at the time and had never removed them since! The people of the caravan, European and Colored, confirmed this statement. Such aesthetic aberrations are very rare exceptions among the Masai, however. Every sensible person disdains bedecking himself with such trash, and that boy would also /Ill. 43 appears here/ come to his senses again when the shoes were in shreds. From then on I always saw him only in Masai dress.

For so-called bilious fever (ol odoa = the gall), an emetic is taken first, either a strong dose of grains of the ol odoa (Maesa lanceolata) or a bark extract of ofti (Acacia mellifera); then one drinks a root decoction of ol deregeli (?) or of ol manuai (?).

To get rid of intestinal worms (taeniae [ol gurto, el gurt] and ascarids [ol budi, el budok]) one uses decoctions of the bark of ol mokotan (Albizzia anthelmintica), of the root of ol deregeli (?), of the fruits of ol odoa (Maesa lanceolata), or also of the powdered bark of ol jani 'njugi (Embelia kilimandscharica Gilg), the latter of which is always taken with fat since otherwise it is too acrid and easily causes violent abdominal pains with diarrhea.

To cure ancylostomiasis (eng ǵa eń gijābe) one administers a decoction of the bark bast of ol mokotan (Albizzia anthelmintica); the bark bast is cooked with meat; the patient drinks the meat broth.

Venereal Diseases

757
[164]
[548]

Gonorrhea and especially lues are quite rare among the Masai. This is due in part to the absence of professional prostitution, and in part to the fact that the Masai are familiar with the dangerousness of these diseases and their easy transmissibility. Those stricken with lues are segregated and may not enter any kraal until the external symptoms of the illness have disappeared; during this time they live outside the kraal in a superficially built hut surrounded by thorn branches for protection against predatory animals. Accordingly lues is called eńg ęa auló, formed out of eng ęa = the sickness, auló = outside the kraal. Lues patients drink a great deal of liquid fat and liquid butter for a cure. One drips on the lues ulcers, as well as on
• [439] those of the chancres, juice of the leaves of ol aisigirai (?), sprinkles on them a powder made out of the leaves of ol agaramóni (?), or burns them with Cuprum sulfuricum, which the Masai obtain in trade with caravans.

593 already been discussed elsewhere (1).

1. Cf. 2nd Part, II, IV, XX.

All disputes arising in this connection are settled by the head of the family without formal procedure.

421 The property rights are little developed. There are no provisions with reference to landed property. The pasture land of the district is the common property of all its inhabitants. The plains are so large that there is more than enough pasture for everyone's herds. Property belongs to a single individual, not to the family jointly.

425 A lost article, if the loser lives in the vicinity and is known, will be returned for a reward (for example, for a spear that has been found, a small goat or a piece of meat will be paid as finder's reward). Otherwise the finder keeps it and it is up to him whether or not he ever returns it. If a stolen article is sold, the buyer becomes the owner, while the person stolen from has to look to the thief for compensation. Even up to 30-40 years ago ivory that was found was heedlessly left lying. Then the Masai learned to appreciate its value from the caravans coming from the coast, and it became customary that, of the two tusks of an elephant that was found, one belongs to the finder, the other belongs to the members of his lineage living in the vicinity and known to the finder. The division among

• [439] the latter takes place through the exchange of the tusk for livestock

437 with an ivory buyer. Among themselves the /213/ Masai barter

438 only livestock for livestock. A small cow is paid for with a fat ox

[435] for slaughter. In former times, before the rinderpest, when the people still had huge cattle herds but few donkeys, a donkey cost two small cows, whereas now, since the ratio has changed, it is paid for with five goats. A fat goat or a sheep is bought for a male

439 calf two to three months old. In trade with caravans, etc., people regard as trade articles, besides livestock, especially wire of iron, brass, and copper, glass beads, such as have already been mentioned in the enumeration of the ornaments, and, more recently, here and there, also colored cloth, especially the cotton fabrics known by the Suaheli /Swahili/ names schiti, konguru, and gamti. The Masai

/213 cont./

439 designate the first one as en aňga en djore, i.e., war cloth, because the warriors like to dress up in it; the konguru they call en aňga bos, i.e., colored cloth, and the gamti, ol garascha.

43 The demand for the individual trade articles varies a great deal. At times the need for one kind is so well supplied that it is either not taken at all or far below its value. Correspondingly, the value of another kind often rises disproportionately high through the heightened demand. A lengthy discussion back and forth precedes every exchange or purchase transaction. As a sign of a settlement, the seller spits [452] on the object. The exchange follows at once; only trustworthy acquaintances are granted credit. The risk in the matter, for cattle, does not pass to the buyer until the day after purchase, otherwise immediately.

426 686 The creditor proceeds against a nonpaying debtor first by complaint, and if this remains without effect, he helps himself to his property by force, provided that the debtor can comfortably pay, but for some reason, usually one that has nothing to do with the debt, does not want to pay: a road that is also often taken as the only one. Only upon his impoverishment will the creditor become earnestly pressing. [672] Then, if the debtor is incapable of paying, his brothers and half brothers, or if such are not present or are unavailable, his paternal cousins must pay. Whether the former or the latter pay, the repayment of the debt is always arranged so that no great economic hardship arises for the one paying. The creditor, if he does not voluntarily [626] enter upon the arrangement, is forced into it by the public opinion, which is often expressed in violence. An inconsiderate collection of an outstanding debt actually never occurs; rather, the creditor almost always displays an extraordinary kind-heartedness and forbearance about it and often lets himself be put off for years or waits patiently until the debtor or his heir is in such a good position that the repayment of the debt will be easy for them. It may also happen that the [581] creditor takes a daughter of the debtor and, after she has reached marriageable age in the service of one of his wives, marries her. [583] Since the creditor, even in this case, /214/ pays his father-in-law the bride price, the debt remains standing in full and the kinship [672] bond only makes its repayment more certain. The heir is liable for

After the war the German titles were invalidated. In 1921 Sir Charles Ross purchased the title to, or a lease on 16,309 acres of the Crater to preserve the game and provide himself with a winter home. He never was able to be in residence, however, and there was a long litigation between him and the Tanganyika Government which ended by their repossessing the land when the said lease expired in 1940. Apparently a Captain G.H.R. Hurst also had a farm in the crater "for several years" after the war (Joelson, 1928).

There were a few European ranches along the north edge of Western Masailand in Kenya prior to 1911. At least one of these was owned by a Major Carnegie in the Lemek Valley north-east of Aitong (Kenya Game Dept., 648 1911). All European lands in Western Masailand in Kenya were given to the Masai as a result of the treaty of 1911.

[797] At Narok, Loliondo, and Ngorongoro Crater there are District Administration offices and missions. [871] [758] Being a District Headquarters Narok also has a Masai school and hospital. Periodically Europeans, especially [439] South Africans, have run small stores here and there in the area. We were told that one was at Guaso Nyiro,

ASIANS

Indians were brought to East Africa in the 1890's and early 1900's to help build the Uganda railway. When the railway was completed many of the Indians elected to stay. Many were hard working and industrious. There were willing to work for less than the Europeans, yet were far more skilled and industrious than the Africans. Consequently they prospered. They now own most of the retail and wholesale business and much of the business real estate in East Africa.

In Western Masailand they have accompanied most of the European mining, administrative and business activities. Their most prominent role is that of duka keeper. Virtually all the retail trade goods that enter Western Masailand are handled by the Asian duka keepers., They, with some Somali traders, handle hides and skins buying, itinerant business from trucks visiting the larger homas, and the trade at dukas at Lolionde, Narok, Ikoma, and Ngorongoro, as well as at a number of small isolated dukas.

As a rule they do not burn or hunt or cultivate on more than a back-yard scale. They apparently encourage some rhino poaching, and they sell the wire

592 What is not used in her own household in the way of milk, meat, and skins /29/ /Ills. 10 and 11 appear here/ /30/ is her housekeeping money, with which she buys vegetable foods and such household objects as she does not make herself. She is not supervised in this in any way by her husband. It is beneath his dignity to interfere in these affairs.

• 443 437 [887] Approximately every three to six days caravans of old women, accompanied by a few old men and laden with maize, bananas, batatas, etc., arrive in the Masai kraals. Then there begins an hours-long haggling and bargaining with the customary market-woman shouting. Each one tries to sell her goods as advantageously as possible, that is, exchange them for just the articles that she needs. Often the caravans come from a distance of four to five days' march and then remain in the kraal for a couple of days before they set out for home.

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic, somewhat smoky-sweet taste that may stay with one for several days.

• 443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

262 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some- 415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned 492 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on 443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

464
561

It seems doubtful if either of these courses can be pursued without exercising stronger measures than persuasion, for this latter has not been lacking in the past. The numbers of the tribe being so small, it would certainly appear to be inadvisable to compel the Masai to undertake agricultural labour for work outside the reserve, as such a step would be sure to cause active discontent without adequate results, but there also seems to be no reason why these expert herdsmen should not be made to exercise their talent to the exclusion of the inferior material obtainable from other tribes. Herdsmen are of essential service to many farmers, and from among the Masai can be drawn some of the best herdsmen in the world.

Employment in K.A.R. or Police.

The reputation for cunning, organization, and militarism which the Masai have enjoyed in the past has also led to consideration of the possibility of utilizing these powers under modern conditions, by enrolling a number of Muran in the King's African Rifles and Police. Experiments have been tried in this connection for more than fifteen years, but, save for some individual exceptions, they have proved unsuccessful. One or two Masai who have succeeded in passing the necessary tests have developed into reliable and efficient soldiers and policemen, but, in spite of repeated trials, the vast majority, discharged as unlikely so to develop, have been turned back to the reserve and represent so much time, labour and money wasted. Such soldiering and discipline appears to the Muran to be too nearly akin to work to be acceptable to them, and they adopt from the first an attitude of passive resistance and listlessness, the exact opposite to that keenness which is essential to successful development. So much has been learnt from past experience, and the compulsory recruiting scheme which is now being acted on, apparently with the consent and approval of the elders of the tribe, has not yet shown signs of any improvement in this attitude. It remains to be seen, however, whether this renewed attempt to break down the barrier of conservatism and sloth will be such as to induce the Muran to take part, as a matter of pride in their ability to do so, in a branch of utility for which their traditional training would appear admirably to suit them.

General employment of Muran.

The employment of the Masai Muran as herdsmen, or as askaris, seems to be the only obvious method by which they can be called on to demonstrate their position as an asset to the state outside their own reserve, and, provided that sufficient development can be procured inside the reserve, it would possibly be bad policy to insist on outside labour by any of the other classes of Masai males. It remains to consider what may be the best means of utilizing their services within the confines of the reserve, and this question is closely connected with the potentialities of the Masai possessions.

*648
231
[954]

Masai stock.

The wealth of the Masai is entirely invested in stock, and is said to amount to the colossal figures of 715,000 head of cattle, more than 2,000,000 sheep and goats, and 10,000 donkeys. This stock is concentrated in a reserve of some 14,000 square miles in extent, of which part is waterless and unfit for stock, and of which part is regarded by the Masai as unsuitable for cattle owing to a suspicion of disease. These two actual and problematical disabilities combine to make the stock-carrying capacity of the reserve but little in excess of what it carries at present, and it is maintained that, without the provision of veterinary facilities, and without the undertaking of public works towards the better distribution of the water, the reserve is now so full that the annual death-rate cannot be less than the annual increase, or in other words, that the amount of stock owned by the Masai is now stationary.

Veterinary work.

As may readily be imagined, the problem of providing veterinary facilities for these vast herds presents such difficulties on account of its magnitude that very considerable increases would be necessary in the Veterinary Field Staff before anything but isolated attempts could be undertaken. This has been the main difficulty in the past, and must remain so at any rate until the cessation of war conditions enables the Government to augment its Veterinary Department by the addition of other qualified officers. Money has been voted in the Estimates for the financial year 1918-1919 for a commencement to a comprehensive scheme of veterinary research in the Protectorate, and these proposed activities affect the Masai Reserve in many ways. A dipping scheme is to be introduced which will,

/118 cont./

177 181 609 466 this and discovered to his sorrow that the cows had wasted away in the last few weeks to the point of being unrecognizable. If he had examined them more closely, he would also have found that they had aged several years in the preceding month. But he had no thought of any dishonesty of the people, whom he considered honorable and good, until after more than 100 of his finest cows had been exchanged for old, worthless ones and he had unsuspectingly marked all of the latter. One could cite a whole series of such examples instructive for the settler, but here let there be pointed out only one particularly popular trick: When in the evening the livestock of the settler is driven to water, the native stock-owners -- both Masai and Negroes -- also like to drive their herds into the vicinity of this watering place. In the press and haste of the livestock for the water, there run into the herd of the European, as intended, a few head of the cattle of the Black, who now, instead of taking his stock out of the strange herd again, moves off with a corresponding number of the settler's best cattle.

177 181 464 609 [454] When the Masai servant who regularly invested his savings in cattle has assembled a small herd, he often enough leaves service in order to return again to his people. If an opportunity presents itself, it may happen that he now serves his compatriots as a spy against his former master. Uncircumcised youths who hire themselves out as boys return to their native kraals for circumcision, live there a few years with their contemporaries in the usual manner, and then often go back into service.

177 181 609 829 The Masai living in the tribe is and remains mistrustful of every European whom he has not become intimately acquainted with through the years. He regards the latter's honesty and forbearance as weakness and believes that it is only because of a lack of strength and cleverness that the European does not oppress him just as he himself does this with the Negroes. He performs a service for the European only in order /119/ to have some -- often enough illegal -- benefits from it. If he concludes friendship with him, it is done merely for the sake of appearances and a monentary advantage. As one accused, he almost never confesses, even with guilt proved, but rather, asserts with profound indignation: "A Masai does not do anything like

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oiboni," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 224-330, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify.

The medicine-men. 991

The Laibon.

The prowess displayed by the pastoral Masai "Muran" in raids on surrounding tribes combined with their ceaseless activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the mobs which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 200,000 head were counted. By March 1914, all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 600,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. R. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,600 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains untenanted on that account, no attempt having been made to utilize veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 43,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilised tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock.

The Masai as a stockman. 233 921 648 * 232 131 161 934 971 961

character and great reputation as a medicine-man, but even his influence does not extend throughout the Purko and Loita divisions. The Council presided over by Sendeu also possesses a certain measure of authority, but these two present the only instances where respect is given and the respect shown in these cases is due almost entirely to the personalities of the individual presidents and not to the system which they represent. 646

The Kikuyu element in the Masai Reserve. 563

The population of the Masai Reserve numbers not much more than 40,000 of whom the great majority are Masai, but which also includes a considerable number of pure or half-caste Kikuyu. The indigent lives led by the Masai pastoralists possess considerable attraction for the neighbouring Kikuyu, who being less wealthy, are under the necessity of performing agricultural and manual labour either in their reserves or on alienated lands. For many years, the Kikuyu and Masai have engaged in trade, and their lands being contiguous, they have had ample opportunities for intercourse. To satisfy their ambitions of an idle life, migrations of individuals from Kikuyu to Masai country have been of not infrequent occurrence and the Masai Reserve therefore contains these scattered units, mainly among the divisions known as the Kaputiei and Il Dala Lekutuk.

Masai aversion to manual labour. 648* 461 291

The policy of the Government in dealing with the native tribes in the East African Protectorate has been to develop their agricultural instincts and industry and to discourage tendencies towards pastoralism. This policy has been pursued with success among the Kavirondo, Kikuyu and other tribes who, when encountered by the administration were under the necessity of engaging in agriculture and has been introduced with fair results into the system of such pastoral tribes as the Nandi and Lumbwa, but with the Masai it has been a total failure. Though encouragement has always been given, the Masai have shown no inclination to till the soil, and in the only recent cases where gardens have been prepared at the instigation of Masai owners, the labour employed was drawn from the Kikuyu tribe.

Work by Kikuyu in the Masai Reserve. 648* 563

The increased activity in recruiting natives as porters for the Carrier Corps necessitated by the military situation in March and April, 1917, led to the emigration of a number of Kikuyu from their own country into the Masai Reserve, and these emigrants, with a view to escaping enrolment, signed agreements to work as servants for Indians, Somalis and Masai. Colonel Ainsworth, then Military Commissioner for Labour, represented that, while such evasion of their duties was highly reprehensible in regard to the employment with Indians and Somalis, any system which admitted of Kikuyu working for Masai was open to the greatest objections on both administrative and economic grounds. The question of such Kikuyu emigration to the Masai Reserve and elsewhere was discussed in Executive Council in June, 1917, and was referred to the Chairman of the Special Committee appointed to consider the "Resident Natives Bill," but no decision on the matter has yet been reported.

Present policy in dealing with Kikuyu emigration.

In view of the general desirability of discouraging such emigration of Kikuyu natives, the policy has been adopted in the Masai Reserve of prosecuting all Kikuyu living in that reserve who cannot claim by long residence or circumcision rights to have become Masai, and of returning them to their own reserve. This policy applies to the cases of all those Kikuyu who have joined the Masai since the move from Laikipia. Efforts have also been made to register all Kikuyu who may be considered to have become Masai.

The Paramount Chief. 648* 791 643

An important step in the revision of the system of Masai administration was undertaken early in 1918, when for reasons mainly connected with the personality of the holder, the Acting Governor recommended that the office of Paramount Chief of the Masai should be abolished.

Seggi.

At the time of Lenana's death, in 1911, Seggi was still a boy, and control over the Masai was exercised by the two regents, Ngaroya and Legalishu. When Seggi came of age and assumed the duties assigned to him in his capacity as Paramount Chief, he was given an extended trial but proved himself to be totally unreliable. He lacked energy, physique and moral courage: he was intemperate and untrustworthy: he appeared to regard any administrative function as an

With regard to the potentialities of the Masai as a tribe, it must be borne in mind that the total population of the Masai in the Masai Reserve numbers no more than 43,000. Of these, it may be assumed that about 20,000 are males of all ages, while some 4,500 are Muran. Taking the proportion normally maintained among other native tribes, for which more accurate statistics are obtainable, it is found that approximately 10,000 males are boys under the age of the Muran class, while the remaining 5,500 are elders. It will thus be seen that the tribe under consideration is relatively small in regard to population, and that, therefore, specialization will be necessary if the attributes of the tribe are to be utilized to their fullest capacity. Population. 162

Sufficient has already been said of the conservatism and slothfulness which are the dominating characteristics of the Masai. The state of idleness in which both young and old live has proved a barrier to progress which has resisted all efforts made in the past to introduce development on civilized lines. The only measure which has attained to any degree of success in the establishment of trading centres, where a carefully controlled trade has opened the eyes of the Masai to a small extent to the advantages of imported articles, and has created some desire on their part to invest a proportion of their enormous capital in trade goods. Even so, it appears that they have not been induced to desire anything more progressive than flour, sugar, and honey in the way of food, and such imported articles as umbrellas, blankets, cotton sheeting, knives, axes, and cooking pots. They are still in a most primitive state. Conservatism. 181

The semi-military organization which has been handed down by their ancestors is still preserved, and continues to act as a deterrent to any innovation. Now that raids are ended, the Muran have nothing to occupy their attention, and it is this fact that has rendered it necessary to consider the possibilities of developing them into useful citizens along a definite line of policy, rather than to adopt merely normal administrative pressure, which has been so successful among the other tribes of the Protectorate. Of their own free will, the Masai will do nothing except fight with the weapons they know, and the young men of between sixteen and twenty-five years of age have now no occupation of any description. It is on behalf of these youths, the Muran, that the first steps in the necessary policy must be taken. Employment for the Murah. 178 464 561

It is known that, by their training from their earliest years, the Muran are experts in the handling of stock. Each boy has been accustomed to herd hundreds of head of cattle since the days when he started to walk, and there is probably no other nation in the world that can boast such a measure of success in this branch of knowledge. But, after circumcision and the assumption of the status of warrior, the youth leaves the care of stock to younger boys, and his ability in this direction is thereby wasted. Stockmen. 464 561

It is said that about fifteen per cent. of the Masai of the Muran class are employed by various farmers in herding cattle, but, even to this extent, the value of their services is largely discounted by the aversion which they show to the performance of work which they consider to be derogatory to their dignity—and the limits of what is not undignified are very materially confined. Manual labour of any kind is regarded as objectionable, and the Masai are physically incapable of carrying loads. But, if they are given a wage high enough to satisfy their avarice, if they are considerately treated, and if they regard the climate of their employer's land as suitable, they cannot be improved upon as cattle herds. On European farms. [461] [147]

In normal times, the number of settlers in the Protectorate who would make use of this class of labour is not large, and the demand for public purposes is smaller still, while the utility of the Masai as a whole in this connection is greatly diminished by their dislike of working for a European whom they do not know, and by the weakness of their constitution, which renders them suitable for work in a restricted area only. In order to make the Masai suitable for general employment even as cattle herds, therefore, it is necessary either to alter their conception of their dignity so as to make their services of more general application, or else to insist on their performing for a smaller remuneration the work that they will consent to do. Demand for such labour.

*648
231

essential problem before the Government at the present time in dealing with the Masai is how to turn this annual increase into a realizable asset. The proposals for imposing upon the Masai a tax of two rupees per head of cattle per annum, approved by the Governor in January, 1918, fell through mainly owing to the impossibility of procuring a market for the quantities of almost worthless stock that would have been produced in payment, and it is difficult to see how this objection is to be overcome unless some much more marketable commodity is produced. Purchase by local residents and firms of the kind of Masai stock that would come in as a result of the imposition of such a tax would in all probability be very limited in extent, and no business firm has yet come forward with proposals for taking over such stock for canning or export by other means. It has not yet been proved or disproved that such Masai stock is marketable for the purposes of human consumption, but it is a fact that much of the stock from the Masai Reserve produced for slaughter by the military authorities was returned as unsuitable, and while it is extremely improbable that the Masai would be able to pay their tax in cash, it is only reasonable to expect that the worst stock would be paid in in lieu of cash where that was unobtainable.

Taxation.

Problem of taxation.

The problem, therefore, appears to be as follows. If the necessary staff is provided, a tax can be collected from the Masai at the rate approved which will bring in stock assessed at £100,000 annually. Of the money realized, £50,000 is to be devoted to works in the Masai Reserve which will so improve the conditions therein as will not only render it capable of maintaining a larger number of stock, but will also so alter the conditions as to make it probable that a higher grade of cattle could be supported in the reserve. When this last step has become effective, it may reasonably be assumed that a market will be forthcoming for the cattle paid in as a tax, but it is not yet proved that it will be possible to realize the value of the stock collected in the earlier years. A trial alone can demonstrate this.

*648

Masai as an asset to the Protectorate.

Enough may now have been said on the subject of the potentialities of the reserve, but it must also be borne in mind that, of the proposed cattle tax, one half of the proceeds are to be paid into the general revenue of the Protectorate, and that it is a matter of concern not only to the reserve, but to the Protectorate as a whole, that the proceeds of the tax should be forthcoming in the shape of a realized asset as soon as opportunity occurs. The Masai have hitherto paid a hut tax at the rate of three rupees per hut, which sum, amounting to less than £3,000 per annum, has not covered the cost of their administration, but the proposed tax will not only cover the cost of the administration of the reserve, but will leave a considerable balance for the general development of the Protectorate, while the needs of the Masai Reserve can be attended to to the fullest extent of which the staff is capable.

[651]

461
464

Masai residing in the reserve.

Of the Masai residing within the reserve, the most that can be expected of those who are not tending cattle is that they will help in the performance of the public works which are destined to be undertaken therein. Hitherto they have not been employed on such works, as manual labour does not appeal to them, and it is indeed doubtful if such a change will be brought about in their temperament as to induce them to perform this. That the position may not be hopeless is perhaps suggested by the fact that certain sections of the Somali tribe who had until recently maintained an attitude similar to that adopted by the Masai, commenced manual labour last year, and a corresponding change for the better may still occur among the Masai.

177
[791]

Future of the Masai.

Conditions have so greatly altered in the Masai Reserve during the last few years that the power of the medicine-men as a class has greatly decreased. The insistence on education for the Masai may further enlighten them, may undermine their conservatism, and may encourage them to discard their prejudices. An organized movement to show the Masai the development that is going on around them and to drive home to them the fact that unless they progress they are bound to disappear in the circumstances attendant on the introduction of civilization may have its effect in eventually bringing them to a conception of their duty. The Masai problem has not yet been tackled, but the prospect of rendering them useful citizens of the Empire is not entirely without hope.

There are, however, one or two matters in which the Masai do not show to such advantage. Beyond their work in their own country as scouts and herds the Muran have not laid themselves open to recruitment for any purpose. It was not to be expected that these indolent stockmen would submit to recruitment for service as porters, for which work they are unsuited both by physique and temperment, but it would not have been unreasonable to assume that it might be possible to recruit them in large numbers for service as herds in the stock depots outside their own country. It appears that the Masai are strongly predisposed to residence in their highlands and practically no success attended efforts made to induce them to enlist in that capacity.

Masai for ardite service and other war work. 648* 464

The experiments which have from time to time been made to obtain suitable members of the Muran class for service with the forces have already been described (*vide* Chapter VI., Section 6). The Masai are practically the only administered tribe in the East Africa Protectorate who have not assisted the allied cause in the field by the provision of recruits for the King's African Rifles.

Another matter in which the Masai have failed where they might have been expected to succeed was in the provision of donkey boys for transport work in German East Africa. As demonstrating the supineness of the tribe it may be advisable to record at some length the steps that were taken in this connection.

Donkey boys.

In April, 1917, the military authorities asked for two hundred and fifty youths as donkey drivers and suggested that it might be possible to enlist a number of Masai for this purpose. The District Commissioner, Narok, replied that volunteers were unobtainable and that compulsion would be necessary to obtain such men. The Muran were about to begin their E-Unoto ceremony, and if compulsion were to be applied to obtain the younger men as recruits collection would necessarily be slow. Such recruitment would also be difficult unless high wages were paid as the Masai were accustomed to receive a minimum wage of ten rupees per mensem for work in any capacity at any place. [465]

In reply to a query from the Military Commissioner for Labour, asking if the provisions of the Native Followers Recruitment Ordinance could be applied to the Masai Reserve, the Officer-in-Charge replied that they could be applied to the uncircumcised youths the eldest of whom were of age for circumcision. The application of the Ordinance to the Muran at the time when they were about to commence their ceremony would awake strong opposition from them as well as from the Chiefs, Headmen and Elders. It will be remembered that the E-Unoto ceremony had about that time been the subject of considerable negotiations in reference to the claim to Kinangop and Mr. Hemsted thought that a further delay in the performance of the ceremony which would be necessitated by such recruitment would be inadvisable for political reasons.

Endeavours were made to obtain suitable recruits but the number forthcoming was inconsiderable. In the past no compulsion had been brought to bear on the Masai to go out to work, very few settlers had much use for them, and those who did employ them were rather inclined to treat them as pets. In consequence the Masai were very reluctant to come forward to work under the very much less favourable conditions proposed. Volunteers for work as donkey boys in the Carrier Corps were quite unobtainable and Mr. Hemsted considered that the application of the Ordinance would be difficult and probable ineffective. The Masai would willingly pay ten times the maximum penalty allowed rather than do any kind of work they disliked or considered derogatory to their dignity and he was of the opinion that they would also prove extremely unsatisfactory for the class of work required. It was doubtful if they possessed constitutions strong enough to stand the climate or arduous conditions combined with a radical change in their usual diet and he thought that desertions would be frequent. Work such as that in the Carrier Corps would be too sudden a change from their present conditions and if the Masai were to be brought into line with the common policy and compelled to prove their usefulness he considered that some other kind of employment more in accordance with what they were fitted for and which wou'd be less disagreeable to them should be found for them in the first place. The transition from a life of ease and idleness combined with a plentiful diet of milk [461]

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

175 648 622 authority always tended to break down in face of the lawless and independent spirit of the Moran. In 1918 the Headmen numbered 46, of whom 28 were unpaid, and 18 received pay ranging from £6 to £36 a year, the former Paramount having a special pay of £90. Fourteen of the 18 paid Headmen were presidents of the Native Councils, and following the custom adopted in many other parts of Kenya, they were given the courtesy title of Chief.

SUBSEQUENT CHANGES IN THE SYSTEM

175 648 178 In the period that has passed since this system was introduced, there have been changes which have to some measure affected the structure of Masai society. The restraint exercised on cattle raiding has robbed the military organization of its former importance, while the growing value of cattle and sheep has enhanced the position of the wealthier stockholders, who now constitute, together with some men of hereditary prestige, an aristocratic element with an acknowledged leadership in Masai society. In other respects the Masai hold tenaciously to their customary institutions and mode of life, and the [701] Moran in particular retain the tradition of indiscipline (in all but a military [461] sense) and the aversion to labour which characterized them in the past.

175 648 623 The Government has in the interval effected changes also in the system of native administration above referred to, with the view of adjusting it moer nearly to the pattern followed in other parts of Kenya. The Central Masai Council and the 14 Native Councils gave place in 1930 to two Local Native Councils, at Narok and Kajiado, which have now been formally constituted under the provisions of the Native Authority Ordinance of 1937. The system of tribunals has also been revised, as will be further explained below.[1] The 622 Headmen have been divided into two grades, Headmen and subheadmen, of whom the former have the courtesy title of Chief. They now derive their powers from the Native Authority Ordinance of 1937.

[465] The 16 Headmen have a pay ranging from 17s. to 70s. a month, and the 28 subheadmen a pay ranging from 10s. to 32s. 50 cents a month. Practically all the Headmen or subheadmen are stockholders, and represent the ruling Age-Grade in each of the different Sections; very few of them are educated or literate and only a few can speak Swahili. The Headmen and sub-[651] headmen constitute the executive agency of the District administration and of the Local Native Councils, and they are in addition charged with the collection of the native Poll Tax. That is a task which they are said to discharge with some efficiency, though as will be shown subsequently in dealing with the administration of the Tribunals, there are numerous cases of the evasion of tax. 625 The Chiefs can call on the services of a small number of Tribal Police, recruited and controlled by the District Commissioner. Up to 1943 the Tribal Police were the only force of this nature in the Province, but since that year a unit of the Kenya Police Force has been stationed in the Narok district, largely in view of the prevalence of stock thefts.

THE LOCAL NATIVE COUNCILS

646 Of the two Local Native Councils, that at Narok has 10 nominated and 23 elected members, and that at Kajiado 10 nominated and 14 elected. There is, however, little difference in practice between the nominated and elected members, since all are in fact selected by the District Commissioner after

B. The duties of Laigwanak — in theory — and in practice — influence in raids and war — position in regard to individual disputes.

One method of discovering the duties of the laigwanak is to ask them what they regard as their task. This method does not necessarily show what they actually do in practice, but it gives a very good idea of their own conception of the office. Placed by different informants in different orders, the following list represents the majority of the answers given :— 561 624

(a) To collect cattle for, and organise deputations to the laibon.
(b) To represent their age in disputes with other ages, and to prevent such disputes from developing into fights.
(c) To lead their people in war, or now-a-days, to prevent them going on raids, (probably a sop to the questioner).
(d) To settle individual cases — payment of debt, compensation, blood-money, etc.

One old gentleman, whose duties as laigwanan take him from his boma perhaps once or twice a year, imagined himself so over-worked that he described a laigwanan's duties as being like those of a houseboy! [461]

The above are specific duties, but what may be called the guiding principles were best summed up by the Kisale laigwanan of Losogonoi — "a laigwanan does not like to see a poor man robbed by a rich, or an old man oppressed by a young one."

But how far are these principles lived up to in practice? How are the above duties fulfilled? The organisation of deputations to the laibon, if informants are to be believed, fell in the old days mainly on the laigwanan of moran, as when he went to get charms for war, or to take the laibon his share of raided stock. But now-a-days this duty falls on all ages except the very senior, i.e. from Dalala upwards. If one age, say Dareto, thinks it good to send a deputation to the laibon in conjunction with the other ages, the Dareto laigwanan will call the Kisale and Dwati laigwanak and ingobir to a meeting. Here it will be decided how many cattle each will contribute, and when the deputation will depart. Thereupon the leaders of each age call a separate meeting, and decide who shall go to the laibon, and who shall contribute cattle. It is the meeting and not the laigwanan which decides these points, but the laigwanan, having obtained his position by virtue of his strength of character, probably has more say in the matter than the others. Considering that these cattle are often in the nature of fines, and that a journey to the Laibon at Mondul is frequently unpopular, it is a tribute to the Masai organisation that such meetings pass off peacefully. No instance is on record of a single dispute coming to official notice arising from such cause. The laigwanan does not necessarily escort the deputation, but quite frequently he does. On the return of the deputation a meeting is again held to hear a report of the laibon's message, and, if a local ceremony has been decreed, to make arrangements for holding it. In any given area it is improbable that a single year passes without the dispatch of a deputation, or the holding of a local ceremony. So, considering the time it takes a Masai meeting to reach a decision, these duties must occupy a considerable — but not inordinate — proportion of a laigwanan's time.

Agricultural Masai

439 whose warlike qualities appeal to the Masai. Honey, honey-wine, and ivory are got from the Dorobo. Ivory was used in the old days for trading with the Swahili caravans for cloth, beads, wire, and so forth. Trade outside Masailand is conducted [126] mostly by the women, for by mutual arrangement they were allowed to pass unharmed from tribe to tribe even during the progress of a war.

Hunting

224 Though the Masai do not hunt habitually, and despise those who do, they used occasionally to kill wild animals—elephants for their tusks, buffalo and eland for the meat and hides, ostriches for their feathers, and lion and leopard to protect their cattle.

Labour

46 Although deprived of their only real occupation, fighting, the Masai have not yet as a people accepted any substitute for it, being, as Sandford noted, " too proud to work," i.e., for wages. A small number have accepted employment as herdsmen on farms, and some have done good service in the Police and K.A.R., though even in a military capacity most of them are still unwilling to submit to a form of discipline that is not their own. Though a few have taken to cultivation, the majority have not yet consented to stoop to what they consider labour unworthy of a Masai.

THE AGRICULTURAL MASAI

101 The agricultural Masai, the I-Lumpua (Lumbwa) and Il-Oikop of former days,
175 are people of Masai stock who, having lost their cattle through disease or defeat, were forced to take up agriculture in order to survive, and by so doing earned the [178] lasting contempt of the pastoral Masai. It is in most cases uncertain how long the various groups of Il-Oikop have been agriculturalists; some of the southern Masai, for example, were defeated by the Gogo early in the 19th century and took to agriculture. Fischer in 1882 reported groups of " Wakuavi," as he called them, living on the southern edge of the Mau; at Ndaseriani (Ndare serian), 15 miles south-west of Narosura; in the region known as Nguruman (*in-kurman*, " the farms ") for about 30 miles north of Lake Natron; at the southern foot of Mt. Meru; and at Kahe.[8] Von Höhnel adds Ndasekera, 20 miles north-west of Lake Natron.[9] Another group is named by Thomson and von Höhnel[10] at Taveta; while the map in Hollis's *The Masai* shows them as extending for about 100 miles south-south-east of Lake Manyara. The best known, however, are the northern group called Il-Tiamus or En-jemusi (Njemps) near Lake Baringo, concerning whom we have (such as it is) the fullest information.

184 With the exception of the Taveta group, the agricultural Masai in general
22 resemble the pastoral Masai in appearance, dress, and general culture, and though they cultivate the ground, still have the acquisition of cattle as their chief ambition. Those of Taveta have mingled with the Taveta,[11] and have become the most successful cultivators among the Masai; the rest of the agricultural Masai in the days of Thomson and Teleki grew mainly eleusine and millet, while the Il-Tiamus grew also pumpkins, and tried unsuccessfully to grow maize. Most of the agricultural Masai supplemented their diet by hunting, bee-keeping, and, where possible, by fishing.

[11] Called by the Masai il Tupeita, sing. ol Tupeitai.

791 /19 cont./
175 was followed by Subet and the latter by Mbatyan. After the latter's
[619] death the Masai split up. One part placed itself under Lenana,
the eldest son of the principal wife, who was born before the accession of Mbatyan, the other under Zendeo, who was the old man's favorite son and named by him to be his successor. The people relate that Lenana cheated Zendeo out of the succession in a way similar to how Jacob cheated Esau out of the right of the first-born. Whereas the deception was achieved in the latter case through the tied-on goatskin, it was made possible in the former case by the gloom of the hut in which old, weak Mbatyan was lying on his sickbed. He thought he had Zendeo before him and instructed Lenana in the secret arts of the ol oiboni. The two are now bitter enemies,
[669] who maintain a continuous civil war, to the misfortune of the Masai people. Lenana, now a man about 49 years old, lives with his followers in British East Africa, in the vicinity of the railroad station Nairobi, whereas Zendeo, ten years younger, inhabits, with his hordes, the steppes of German East Africa. Both are merely phantom figures in comparison with their father, who had occupied an
175 outstanding place in the succession of chiefs. Under him the Masai
619 experienced their last golden age. After his forefathers Sitonik and
791 Subet had subjugated the Wakuafi, it rested upon him to keep down
726 their constant uprisings and to weaken and enslave them so that no
[669] danger from them could threaten the Masai any longer. Through a well-organized spy system Mbatyan kept himself continuously informed about the conditions of his opponents, so that the rapacious warriors could always attack those very Wakuafi settlements in which a war expedition /20/ against the Masai was being prepared. The most trouble here was made by the Wakuafi of Meruberg /Mt. Meru/, who found safe hiding places for women and livestock in the clefted mountain forests, while the men undertook raids on
175 neighboring Masai kraals. Finally, however, the Meru people were
619 successfully mastered: indeed, they even became so pliable that
791 they performed compulsory labor for their oppressors. One must
727 bear in mind with what deep contempt all men of the Masai people
466 look upon any kind of work, which they regard as something dis-
461 graceful, not compatible with a man's dignity, in order to

175

727
466
• [466]

/20 cont./
understand what such a success meant. Mbatyan demanded thousands of workers, and they moved obediently, in endless long lines, men, women and children, toward the steppe area of Kisongo, lying

west of the mountain, where the mighty one resided, like his ancestors. There they had to dig a long water channel, whereby -- a further particular humiliation -- the men had to work in rank and file with the women. Encouraged by these and other successes, the Masai became more and more arrogant, and they extended their war expeditions farther and farther. It was not only the Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

175
791
755

The belief in the magic means for healing purposes which Mbatyan gave those seeking help, and whose chief ingredient quantitatively was the vanilla-scented, pulverized wood of the ol mogongora liana, was so deep-seated in the people /21/ that it was often supposed to have actually brought to the people

563

/Remote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564
326
461
114

The opinion of many a European, that the /112/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El lumuna who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564
326
783

Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564
326

Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Kiguma from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugga people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el lumuna have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (el engwet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (el ninkishore). The smith makes his tools as well as his

/116 cont./
the wives of the blacksmiths. Smaller ornamental objects of wire are made by the other Masai women. The small chains of iron and copper wire are not made by the Masai themselves, but are bought ready-made from the caravan people or the sedentary neighboring tribes.

XIV.

Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Masai in the service of the European. -- Attitude of the Masai living among his people toward the European. -- The Masai toward their kind. -- Hospitality -- Position of the woman. -- How the Negro illustrates the character of the Masai. -- Expression of emotions and other gestures. -- Strength of vision. -- Art sense. -- Color sense. -- Orientation ability. -- Song. -- Ideal of beauty of the human body.

The most outstanding trait in the character of the Masai is their national pride which is based on the religious view that they are the chosen people of God. God created the world and all that is in it only for them. All non-Masai are subject to the Masai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with 'Ng ai and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the soil in the sweat of work. On the other hand, God cares for the Masai as for his children, they need not work: "ol dobira ndol ndol a work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Masai take it by force. In fact, the Negro, in the opinion of the Masai, only has justification for existence as keeper of the livestock created by 'Ng ai for the Masai.

In general the Masai designates all non-Masai as ol mag ring, ol magik, a term that is to be translated as "unbeliever." /117/ The Masai does not know friendship and loyalty toward the

/119 cont./

593 181 [186] The Masai are animated by a deep feeling of solidarity: they stand united against all foreigners. A sincere attachment and love bind the individual members of the family: they vie with one another in order to free a relative who has fallen into slavery. Thus, in 1896, the Masai who returned from the Berlin Exposition immediately used the greater part of their savings to buy back relatives who had become slaves during the great livestock epidemics around the year 1890. The tightest is the bond between parents, especially the mother, and children, as well as between brothers and sisters, looser between married people, where the lowly, oppressed position of the wife is of some importance.

181 • 461 554 735 602 The men scorn any kind of work. Only waging war is worthy of a man. Large herds of livestock and many wives are his supreme happiness. One who has both enjoys respect and prestige. One looks down on a poor devil. Truly poor people, however, are exceptions, since relatives support one another in generous ways. One who does not have such quickly finds accommodations as a rule with one who is well-to-do. He receives food and for that helps the women and children of his benefactor with their work (livestock-tending, kraal-building, night watch for the small livestock, etc.). The condition of /120/ poverty is also always only of brief duration: the poor man soon acquires some prosperity again through gifts from friends or a 574 [572] share of the spoils of war. Toward friends, one is just as generous as one is good-natured: the hospitality to countrymen, no matter where they come from (with the exception of the blacksmiths, of course), is unlimited. Everyone offers a visitor whatever he happens to have in food and drink. Everything that the stranger needs or wishes is at his disposal. He reserves for himself a hut for the night [837] by sticking his spear in the ground in front of it: the host then seeks other quarters for the night and leaves home and wife to the guest. If a woman comes for a visit, the wife leaves the hut for the night, so that the stranger may take her place. Hospitality toward other peoples is known only if peace is concluded with them through the ceremony of infant exchange or through blood friendship. The 181 cruelty of the Masai is no greater than that of the other black peoples, for example, the Negroes neighboring the Masai. If they

/120 cont./ If they
181 spare women and children in war, it is not out of compassion, but
[567] solely in order to make them useful as slaves, whereas the Masai do
not keep such. In general one cannot attribute to them a lasting
vindictiveness toward their own kind. The Masai only in part
possesses the courage attributed to him. Their extraordinary impu-
dence often makes them appear more courageous than they really
[593] are. Their sensuality equals that of most East African tribes. The
[837] wife is at the disposal of every man who belongs to the age class
[561] (both ol boror and ol adji) of her husband and desires her. It is
593 obvious that, as a result of such conditions and in conjunction with
the prevailing polygyny, there can be no question of a proper family
life in the higher sense. For her own husband the woman is espe-
cially the labor force that he needs for household and livestock
management and the means of fulfilling his wish for as many progeny
as possible. Accordingly her treatment depends on how she measures
562 up to these tasks. Moderate beatings are not uncommon, but rough
• 461 treatment almost never occurs. In contrast to the men loafing
[462] about lazily, the women are busy all day long. For the married
[517] women there are scarcely any amusements except dance and song:
they had short dance or sport before their marriage, when they could
have their fling in the warrior kraal. In public life, as well as with
respect to her own husband, the wife has no rights. Of course the
Masai woman does not regard her servile position as such. She knows
nothing else, and fortunately one does not miss a comfort that one
562 does not know. As soon, however, as she is transplanted from her
461 own tribe into a foreign one through kidnapping in war, her willing-
178 ness to work immediately comes to an end. The less oppressive
177 her new position is, the lazier and at the same time more demanding
she becomes. She suddenly regards herself as too good to work, and
her desire for clothing and adornment often increases immeasurably.
/121/ Accordingly, her interest in the household becomes less to the
point of disappearing and her passion for amusement great. The reason
for this phenomenon undoubtedly lies in the fact that she regards life
among the hated and despised ol mdg as a disgrace and the work re-
quired of her by them as an insult inflicted on her.

123 824 Our use of the capture gun to capture and mark wild animals was of particular interest to the Masai. 123 461 824 They would often come up to watch us. Masai are famed for their refusal to carry out manual labor of any sort hence are regarded in East Africa as poor helpers on safari. However, labor, where it involves animals, is another matter. Sometimes Masai would come up and voluntarily help us handle captured animals, and this they did very well. We even experienced Masai coming to our camps to talk about our capture work that they had observed from a distance.

123 262 609 When we had extra meat from animals that we collected, we took it to the nearest Masai village. Most authors have expressed that Masai will not eat the meat of most wild animals. We found, however, that they gladly accepted it in most cases. They always wanted to know what animals were involved. In several cases, when we first approached a village those who came out to meet us would refuse the meat. Then someone who knew us or knew of us would appear and accept the meat, explaining that the others did not know us.

123 757 Virtually all visitors to Maseiland are regarded as a sort of travelling dispensary by the Masai. This is true throughout the world for most people who do not have

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they saddle their donkeys with skins and pack-saddles in which they put their gourds, and the women carry bags.

Should they stop in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ngobori, i. e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They procure poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from trees; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

Masai warriors' kraals and slaughter-houses.

Masai warriors do not live in the kraals of the married people; they have their own kraals, where they dwell with their mothers and lovers.

When they go to the woods to eat meat, they live in the slaughter-houses[1] with their boy-servants.

[264] [1] Meat may not be eaten in the manyat, or warriors' kraals, and special places, called il-puli, are erected in the woods, to which the warriors retire when they slaughter cattle.

Kenya

561 place until the two senior groups move out together into the elders' class. The result of this arrangement is that no group which enters the warrior class as *murategedienye* ever stays in the warrior class for as long as any *jangienobur* group.

56 62 59 [361] [634] *Manyattas.*—During their time of service in the warrior class the members of each age-group live in special villages built away from the main married men's villages. These villages are territorial, in that all the warriors of a single age-group in a single area live in one such village. Warriors of different age-groups never live in a single *manyatta*, as each *manyatta* is essentially the headquarters of the members of a single age-group in the warrior class in a given area. *Manyattas* are moved about from place to place when fresh grazing is necessary.

621 561 A *manyatta* consists of a number of huts each one of which is built, and lived in, by the mother (or another married woman relative) of one of the warriors of that *manyatta*. Normally each warrior has his own mother living in the *manyatta* and she is accompanied by her children, especially by some of the man's uninitiated sisters and half-sisters. The elder women are there to do the work of the *manyatta*, [462] such as milking, fuel gathering, water drawing, etc., and in this they are assisted to a certain extent by the girls, but the latter are chiefly in the *manyattas* as companions and lovers for the warriors. No girl can live at a *manyatta* at all unless her brother or half-brother is a member of that *manyatta*, and each warrior living at a *manyatta* is expected to bring two or three of his sisters or half-sisters to live at the *manyatta*, and if possible some of these should be fairly grown up and others quite children who will grow up at the *manyatta*.

836 561 *Sex Life.*—During the warrior stage no man may have sexual intercourse with any initiated girl or with married women, but on the other hand, there exists in the *manyattas* a system of sex life which is decidedly interesting. The warriors, whenever they feel like it (which, as my informant pointed out, is "very, very often"), invite one of the girls (sisters of the other men in the *Manyatta*) to sleep with them. [201] This is done by a method and formula which corresponds in some ways to the [832] *umbani* of the Kikuyu peoples, but has certain marked differences. [971]

A group of warriors at any time of the day will stand outside the village and call to any of the girls whom they see about, and when they come they say to them *tasiukiu*, and the girls then each select one of the men, and say "I choose so-and-so," not mentioning the man by his own name but as "the son of so-and-so." By so doing the girl binds herself to go and sleep with the man so chosen that night. It is a point of honour and etiquette that no girl so called upon to choose a man may refuse to do so unless she is (*a*) actually at a menstruation period at the time, or (*b*) has already promised herself to another man for that night, but she may make her choice from any of those men who were in the group that called to her.

Kenya

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 234 461 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (*see* Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep these would certainly bring bad luck on the raiders. 721 [682] [777]

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (*see* Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary novices or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [563]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e* the rough fleshy side). 'Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not *vice versa*), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [574] [582] [563] [411] [412] [438]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

latter is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uncircumcised boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

The only specialists in the economic sphere are the smiths, *il-kunono*, sing. *ol-kunoni*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who oil their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Matapato river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[6]

Though according to Hollis a few Masai women made pottery, the Masai as a rule buy their pots from the Bantu.

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *ol-osowuan*, and eland, *o-sirua*, which they considered to be related to cattle, and therefore fit to eat.[7] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *ol-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Bantu agriculturists, *il-meek*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs,

[6] Leakey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 209); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[7] The Galla also consider the buffalo to be the equivalent of the ox. Bahrey, *Historia Gentis Galla*, chap. XX, Guidi.

342 out of material available everywhere. Like every task in the
[462] kraal, hut construction is the duty of the women. After the site for the individual hut (Fig. 3) is cleared of grass and brush and then leveled, the spiral-oval ground plan is undertaken in that the woman scratches it on the ground with her foot. They do not
[804] use any auxiliary means for measuring it: measuring by eye is sufficient for the woman who, even as a child, helped her mother with this work. Into the ground plan, at foot-long intervals, poles
342 (ol ōmi, el ōm) about 1 1/2 meters long are stuck in the ground
335 and joined lattice-like with thumb-thick cross-switches (ol gereni, el gerenen). Then in the longitudinal diagonal seven to eight supports (em bogischi) are dug in, over which a longitudinal bar (ol ereschena, el ereschenan) is put from one end of the hut to the other. Over this the poles are arched and the opposite ends lashed
[284] together with papyrus grass (es sedja). By interplaiting finger-
[824] thick switches (en jaschoi, n jascho) walls /24/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters high, 4 to 5 meters long and 3 meters wide. Neats' skins served
[237] principally for roofing before the rinderpest raged among the
[731] livestock around the year 1890. Now, /Figs. 2 and 3 appear here/
[824] when the Masai herds have become vanishing small in contrast
[237] to former times, the switch framework is first packed with a layer of dry, long-bladed grass (ol gudjeda or ol godjeda) 15 to

595 /27 cont./
[736] see in their position as secondary wife lasting or temporary maintenance. Each wife has her own hut, in which she lives with one or several small children and manages an independent household. The woman married first is the principal wife (en aitero eng an) (1)

1. = the first in the kraal.

and remains such until death; then the woman married next after
[422] her steps into this position. The principal wife is supported the best, in that the husband surrenders to her a large part of his cattle for the usufruct and treats her with distinction before the other wives by means of gifts of ornaments and clothing, as well as by better service. /28/ Her eldest son has prerogatives in the right of succession. The principal wife exercises supervision over the other wives and keeps them at the work when they neglect it.

422 The domestic community does not have any common property. As property there comes into consideration first cattle, goats,
[554] sheep, and donkeys. The size of the herd is the gauge for the social position of its owner, the father of the family. The cattle
[428] handed over by him to each of his wives for care and usufruct remain his own, and only when the wife has a son about ten or twelve years old do they pass, with his consent, into the latter's possession, and sometimes into his ownership. /Ill. 9 appears here./ A presupposition for the latter, however, is that the boy
[591] is not needed in the tending of the paternal herds. For as soon as he receives the livestock, he must leave his father's kraal, along with his mother, in order to lay out a small new kraal for himself at a distance of several kilometers. This is supposed to prevent the two herds from coming together, an opportunity which otherwise the son would often enough take advantage of
422 to steal from the father. Huts and household implements, both
423 only of slight durability and little value, theoretically also belong to the father of the family, but in practice to those of his
[462] wives who use these things. The woman builds the hut, whereby the children or other women help her. What is not used in

000

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eṅg aṅ el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandoróbo, who presumably learned the potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[158] healthy people uncooked, as fresh (eṅ gule) or sour (eṅ gule naoto); boiled milk is food for the sick and as such is usually mixed with pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted
[158] state. Milk mixed with fresh or /33/ cooked blood (en jiwŏt) is greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[153] (1),
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
[753] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence of neglecting this custom. Bringing milk into contact with meat
[231] is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

At one o'clock in the afternoon, the noon meal is eaten, after the men who have looked after the cattle in the pasture have returned. After the meal one takes a nap, plays a little game, or picks up some manual work (making articles of clothing or adornment, clubs, gourd bottles, etc.). The principal game

Fig. 8. 3/10.

of the Masai is the board game (en dodoi, en dodo) (Fig. 8). Two rows of six to ten depressions or compartments running side by side in a longitudinal direction are carved into a thick board about two feet long. The rules of the game are as follows: the board stands between two players; to each of them belongs the row facing him (ol mátua, el mátuan). Now each one places in each compartment (en qurtóto, 'n qurtót) of his row four stones (os sóld, es sóldo) (2).

> 2. One uses for this round river-pebbles or the fruits of the ol gúlangulu (Caesalpinia Bonducella Roxb.).

The player who starts takes the four stones out of one of the compartments of his row and puts one of them into each of the next compartments to the right. From the compartment in which he placed his last stone and in which there are now five, he removes these and, as before, places them in the next compartments, whereby he passes from his own row to that of the opponent. He proceeds in this manner until the last of the stones taken from a compartment happens to fall into an empty compartment.

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organization: the speaker, his badge and tasks; leaders; benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- War: permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

621 70 [361] [634] In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (of manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

[342] [513] [423]

621 701 462 [351] [356] The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

[Warrior Kraal]

512 /89 cont./
701
462 Life in the kraal begins at sunrise, when the mothers and the girls start milking the livestock. Not until around seven o'clock, when the boys drive the livestock to pasture, do the warriors get up to take the first meal (en daã e dadegenja = food in the morning), consisting of fresh milk. Then the women apply themselves to the

326 ax or ten arrow points, a goat each; for the other things he is paid
[435] with milk. If the orderer furnished the iron wire, only half of the prices named is given as payment for the labor.

From thick brass and copper wire (os sojai, es sojai os sojai ebor, brass wire; os sojai gáó, copper wire) the blacksmiths draw thin wire. For this they use as tools the en gáúo and the ol gamét. The former is an iron approximately a foot long (Fig. 26a), which is an inch thick in the middle and on both sides often tapers to points. In the center it has a few conical holes of different widths through which the wire is drawn. Not infrequently the en gáúo also consists only of a piece of strong sheet iron that /116/ is not pointed at the ends. The ol gamét (Fig. 26b) serves as tongs and has the shape of sugar tongs whose grasping arms are squeezed together by an iron spiral
325 drawn around them. The drawing of small pieces of wire is done by hand, whereby one man grasps the en gáúo, the other the tongs. For larger work the former with its two points is wedged into a forked

[413]

Fig. 26b.

wooden block, while the wire already drawn through is fastened to a roller resting on two forked branches. By a slow turning of it the wire drawing then proceeds. In order to make the wire still thinner, it is drawn a second time through an iron with a smaller hole. The
306 spiral-shaped neck-ornament of the Masai women (es segeigeí e
301 murt), the double-spiral earrings of thick brass wire (es surudiai,
325 surudia) the women and old men, the arm and leg cuffs of iron
462 wire (es segengai, with designation of the part on which they are worn), as well as the tin ear-pendants (ol aimír, el aimér), are made by

000 Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Masai in the service of the European. -- Attitude of the Masai living among his people toward the European. -- The Masai toward their kind. -- Hospitality -- Position of the woman. -- How the Negro illustrates the character of the Masai. -- Expression of emotions and other gestures. -- Strength of vision. -- Art sense. -- Color sense. -- Orientation ability. -- Song. -- Ideal of beauty of the human body.

186 799 829 [181] [461]

The most outstanding trait in the character of the Masai is their national pride which is based on the religious view that they are the chosen people of God. God created the world and all that is in it only for them. All non-Masai are subject to the Masai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with 'Ng ai and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the soil in the sweat of work. On the other hand, God cares for the Masai as for his children, they need not work "*ol dolice ndol ridai*" work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Masai take it by force. In fact, the Negro, in the opinion of the Masai, only has justification for existence as keeper of the livestock created by 'Ng ai for the Masai.

186

In general the Masai designates all non-Masai as *ol mag fing*, *ol maglk*, a term that is to be translated as "unbeliever." /117/ The Masai does not know friendship and loyalty toward the

/150 cont./ If they

181 spare women and children in war. It is not out of compassion, but
[567] solely in order to make them useful as slaves, whereas the Masai do not keep such. In general one cannot attribute to them a lasting vindictiveness toward their own kind. The Masai only in part possesses the courage attributed to him. Their extraordinary impudence often makes them appear more courageous than they really are. Their sensality equals that of most East African tribes. The
[593] [597] wife is at the disposal of every man who belongs to the age class
[561] (both of honor and of age) of her husband and desires her. It is
593 obvious that, as a result of such conditions and in conjunction with the prevailing polygyny, there can be no question of a proper family life in the higher sense. For her own husband the woman is especially the labor force that he needs for household and livestock management and the means of fulfilling his wish for as many progeny as possible. Accordingly her treatment depends on how she measures up to these tasks. Moderate beatings are not uncommon, but rough
562 561 treatment almost never occurs. In contrast to the men leading
• [562] about lazily, the women are busy all day long. For the married
[567] women there are scarcely any amusements except dance and song; they had their share of them before their marriage, when they could have their fling in the warrior kraal. In public life, as well as with respect to her own husband, the wife has no rights. Of course the Masai woman does not regard her servile position as such. She knows nothing else, and fortunately she does not miss a comfort that she does not know. As soon, however, as she is transplanted from her own tribe into a foreign one through kidnapping in war, her willing-
562 561 ness to work immediately comes to an end. The less opposition
177 her new position in the latter and at the same time more demanding
177 she becomes. She suddenly regards herself as too good to work, and her desire for clothing and adornment often increases immoderately. /151/ Accordingly, her interest in the household becomes less to the point of disappearing and her passion for amusement great. The reason for this phenomenon undoubtedly lies in the fact that she regards life among the lazed and despised ol oiki as a disgrace and the work required of her by them as an insult inflicted on her.

/136 cont./

281 The other skins, after they have been well dried and /137/ dehaired
by scraping with a sharp ax, are treated by a vigorous rubbing with
[284] a tanning extract. The bark of Terminalia Brownii Fresen var.
Merkeri Engl. (ol bugei) is pounded and made into an extract by
being boiled in water. The finished leather is soft and pliable.
• [342] Leather dressing is women's work. The scraped-off cattle hair is
carefully hidden in the thorn fence of the kraal, so that the cattle
do not eat it and become sick from it.

291 The sole article of clothing of the warriors is the skin cape
[294] (e mugii, mugiin): it consists of calf skins sewed together into a
strip approximately 110 centimeters long and 64 centimeters wide.
The entire strip of skin is folded over once crosswise, and of its four
corners the two top ones, lying one on the other, are sewed or tied
together. One puts the cape on by sticking the head and left arm
through the knot lies on the right shoulder, chest, back, and left
hip are covered, left shoulder and right hip bare; the latter so that
[294] the sword found there is free. The warrior cape is the only article
of clothing that is never dehaired. The hair side is worn on the
outside and, if carefully chosen in color,
is often quite attractive, since only the
silky-lustrous skin of clavas unborn or a
[294] few or two old are used. Often the upper
and lower edges of the cape are sewed
with one or two rows of small red or white
[136] beads. Only very rarely is it also made
of other skins than, the author saw two
made out of that of the dark-green long-
tailed monkey(Cercopithecus albogularis).
Boys and men wear tied over the seat to
the sword belt a three-cornered piece of
leather to sit on (Fig. 38) (ol gobeen,
ol gobeenin), made of ewe's hide or
calfskin, for protection when sitting,
against the thorns and prickly spikes of
the grasses scattered everywhere in the steppe. Boys wear a very
short cape (en jorong, e jorong), covering only the belly and back;

Fig. 38

361 /177 cont./
233 animals that go forward only with difficulty are carried in the arms.
[561] Boys take care of the livestock driving, under the supervision of
[701] married men. With each party is found a stronger guard of warriors.
[492] Meanwhile the women are still busy with the loading of the donkeys, on which all the household equipment is packed. More rarely a few oxen or cows must help out. After this work is finished, the herd of donkeys follows the tracks of the livestock. Behind them come the women, girls, and children: almost every one of them also drags along some household object or at least a small-livestock or neat
[701] skin. Oddly enough, a guard of warriors is not found with this party, as there was with all the preceding ones, but rather at most a few old men armed with spears or bows and arrows. Usually the destination is reached on the same day. If this is not the case, however, camp is pitched during the night within a hastily constructed barricade of thorny branches. The next morning the march then continues
361 before daybreak. After arrival at the new site the women immedi-
• 462 ately start laying out the kraal. First the thorn barricade is laid out, and in the following days the huts are built. Erecting the kraal proceeds very rapidly: as a rule it is finished in a week at the latest. The old kraal was not destroyed upon being vacated. It is left standing and reoccupied later, after the pasture has recovered. Meanwhile, of course, much has deteriorated, so that the work of
[136] reconstruction almost equals that of a new installation. In the last few years, since the sand flea (Pulex penetrans) has become a pest in East Africa, the reoccupation of old kraals is declining more and more. In order to destroy the noxious insects inhabiting them, they are burned when vacated.

000 It is obvious that the European who wants to engage in stock-breeding here cannot move about with his herd in the manner of the Masai. Moreover, a division of the herd in such a way that sufficient grass is present throughout the year within range of the kraal for the individual parts does not seem feasible, and, to be sure, especially because of the difficulty of personal supervision and observation of the sicknesses arising, as well as of isolation in case of an epidemic. An improvement of the pasture by means of

575 and so on. The wife is given a specified number of cattle to keep in trust for her son, and she and the children also tend young animals in the herds.

342 These huts are about five feet high and of varying dimensions, but usually roughly square and 10 to 20 feet across. The door is very low. Just inside the door there is normally a baffle wall of loosely woven twigs. Beyond that there are often two or three rooms, each divided from the others by a low open wall of [231] twigs. Young livestock are brought into one of the [512] rooms and the others serve for sleeping and cooking. [351] Usually the beds are platforms of twigs and grass covered [354] by hides. The cooking fire is in a far corner and is very small, normally with three stones around it to support pots. There is no smoke hole in the roof. The outer walls and roof are an open mesh of wattle often interwoven with coarse grass and shrubs. Support comes from larger branches and small logs up to about six inches in diameter. The exterior and walls and roof, and the inside of the door opening are plastered with [154] a mixture of mud, cattle dung, and short grasses. Hut [462] design varies slightly from area to area. Constructing the huts is women's work. Men occasionally help in collecting larger trees and bushes.

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

70 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75 (People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up

(177) inside a hyena. The administration frowns on this
(178) efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 Foods Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho

234 (maize meal), milk, meat, and occasionally blood. The
• 462 cows and sometimes goats are milked by the women and little

234 girls. The milk is collected in large calabashes. These
415
(531) calabashes, ochre colored and sometimes ornately
(384) decorated with beads, are almost as much a symbol of the
(291) Masai as the ochre blankets or cloaks, moran spears and hair styles.

562 eat meat from wildebeests and gazelles. When I shot an elephant near one boma the Masai women turned out in [252] force. They spent most of the day cutting off strips of [462] subcutaneous fat and some flesh. A few elders joined [825] the women in the cutting. Several Masai requested fat from a lion I had shot (which had been raiding their boma), but they said that their use was for medicine rather than food. We have records, therefore, of Masai eating (or taking to eat) wildebeest, Grant's gazelle, Thomson's gazelle, elephant, buffalo, eland, and kongoni.

Cattle are usually eaten when they die. Cows are rarely slaughtered, although bullocks sometimes are killed for food and prize ones are killed and eaten [562] by men at ceremonies. We have watched women picking up the remains after livestock have been slaughtered, and Millais (1920) spoke of Masai women eating offal and other remains of oxen or sheep after the men were through eating.

231 272 Bleeding of cows and sheep is accomplished by tying a thong about the animal's neck so the jugular swells, then shooting a partially blocked arrow into the jugular vein and catching the spurting blood in a gourd.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

The smiths [1].

All Masai do not know how to make spears and swords; this is the work of the smiths. It is they who make the weapons, and the others purchase from them.

The smiths use in the forge a stone, a hammer, pincers, and bellows, and they make needles, bracelets, axes, anklets, weapons, and other things.

The iron which they work with they purchase from the Swahili, or they smelt the ore which they find in the bed of the Matapato river.

Every clan has its smiths; but there is one clan, the Kipuyoni, to which most men of this class belong.

The other Masai do not marry the daughters of the smiths, for it

564 171 [1] The Kunono and Dorobo seem to hold much the same position among the Masai as the Tumaloda (smiths) and Ramis (hunters) among the Somali. No free Somali enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumaloda are spread over the whole of Somaliland as the Kunono over Masailand, and no instance is known of them giving up the trade. Still more debased and poorer are the Ramis, who, like the Dorobo, live by hunting game. Cp. Ratzel, *The History of Mankind*, vol. ii, p. 494.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

latter is of little economic significance, except that it is the duty of the warriors to get cattle by raiding. In the division of work, the people mainly concerned are the uncircumcised boys, the girls, and the women. The boys do most of the herding, assisted by the elders. Women and girls milk and act as servants to the warriors. The girls do household work till they are old enough to become lovers of the warriors, when they do very little work. The greater part of the work thus falls on the older women, who besides doing or supervising the milking and other ordinary household tasks like fetching water and firewood, build the huts, load and drive the donkeys when moving, prepare skins for clothing, and trade with neighbouring tribes for food and other things. The warriors used to be occupied exclusively either with war or preparations for war, or with dancing, visiting, and making love. Their military activities have today been replaced by certain tasks connected with cattle, and by cattle-stealing and raids on neighbouring tribes. The senior elders are occupied with political matters, and some of them with the instruction and control of the initiates and younger warriors; they also help with the herding, and take part in trading with the neighbouring peoples.

The only specialists in the economic sphere are the smiths, *il-kunono*, sing. *ol-kunoni*, who live segregated from the rest of the Masai, and marry among themselves. They have a distinctly inferior status, and are despised by the Masai, who oil their hands before taking anything from a smith. At one time the smiths lived near deposits of iron ore, such as those in the Matapato river; but nowadays the availability of trade-iron has given them greater freedom of domicile. They make the iron-work used by the Masai, including spears, swords, and ornaments.[6]

Though according to Hollis a few Masai women made pottery, the Masai as a rule buy their pots from the Bantu.

Food

Except among the agricultural Masai, no cereal or vegetable food at all is grown, nor was it eaten in the old days by warriors, whose diet consisted of meat, milk, and blood, the latter providing the necessary salt. The animals eaten included their own cattle, buffalo, *ol-osowuan*, and eland, *o-sirua*, which they considered to be related to cattle, and therefore fit to eat.[7] Warriors were not allowed to eat honey, to drink honey-wine, or to take tobacco, though some took snuff. Children and married people eat vegetable food, and the meat of cattle which die a natural death. Warriors when they want to eat meat, build a rough shelter called *ol-pul* in the bush where, accompanied by a boy to do the work, small groups feast upon the meat of an ox supplied by the father of one of their number. The elder who supplies the ox is given some of the meat, and this is one of the regular sources of meat for married people, for meat eating is the regular practice of warriors. Men and women do not eat together, and fish, fowls, eggs, and game other than buffalo and eland are not eaten by any Masai.

Trade

Since the Masai are not self-supporting, they have to trade with the Bantu agriculturists, *il-meek*, whom they despise, in order to get what they want. Their chief suppliers are the Kikuyu, Chaga, and Taveta; and for certain things, notably ivory and honey, the Dorobo. The media of exchange are cattle (old, barren, and otherwise unsatisfactory cows), old and thin goats and sheep, donkeys, butter, and hides. The principal goods bought are food (beans, millet, maize) and tobacco, which they get from the Bantu; the chief suppliers of meal are Indian traders, often Sikhs,

[6] Leakey says that the Masai buy their swords from the Kikuyu (*JRAI*, LX, p. 209); this may well be the case near the Kikuyu border, though it is perhaps a recent development.

[7] The Galla also consider the buffalo to be the equivalent of the ox. Bahrey, *Historia Gentis Galla*, chap. XX, Guidi.

181 464 561 Employment of the "Muran."

More particularly does this argument apply to the "Muran" who are of the ages at which the members of agricultural tribes are expected to work. No suitable employment has as yet been found for them as a body, though a small number have been known to reside as herds on the farms of sympathetic European stock-owners who are willing to pay a high wage for a modicum of service and who will not insist on their performance of any uncongenial labour. A very few also have proved efficient in the Police Force and K.A.R., while numbers of them, employed in the capacity of native levies have frequently proved of assistance in punitive expeditions against other tribes,* but for the majority, all attempts to find a suitable form of employment have failed, and they continue to lead their idle life in the Reserve, where their attitude is one of conceited conservatism combined with opulent apathy. The discipline formerly necessary to their existance as a fighting race is rapidly falling into disuse, and the good qualities they once possessed are fast deteriorating. Many of them have confessed to a feeling of boredom with their idle life but few have had the moral courage to change it for one of labour. This manner of existance is having a disastrous effect both physically and mentally on the Masai as a tribe, and it is stated that the average height of the "Muran" has decreased by three or four inches during the last fifteen years.

181 232 233 179 Masai conservatism respecting cattle.

It has been said that the Masai Reserve is already, with certain reservations, stocked to its fullest capacity. Mr. Hemsted has estimated the natural increase in cattle at 15 per cent. or approximately 100,000 per head per annum. It follows therefore, that a similar number must be disposed of or perish annually; but this is an argument which does not appeal to the Masai. They have not only shown a marked reluctance to sell their stock, but they have made no serious attempt to accept the assistance of science in improving the grazing conditions of their country, and, being satisfied as a result of the few experiments they have made that the class of stock they possess—a small, degenerate, in-bred animal—is best suited to withstand the ardous conditions prevailing in the Reserve, they are unwilling to permit a cross-breeding with pure-bred or grade stock which might materially increase the value of their herds in the world's markets, and which would, by the introduction of fresh blood, obviate the ill-effects of in-breeding which has been rendered necessary by the cessation of raids. The wealth of the Masai, therefore, is turned to no good purpose; their style of living does not change; they are still content to live in low buildings constructed of poles, grass and mud, in conditions of filth that defy description; and, although an improvement has been noticeable in recent years, they have shown no great desire to utilize their wealth in the purchase of imported articles and in the improvement of their diet.

623 561 Councils of Elders.

Another aspect of the character of the Masai "Muran" which deserves consideration is the disregard which they evince for the authority of their own native administration as represented by the Councils of Elders. These Councils exist according to native custom, but have never been in the past, nor are they now, efficient to enforce the decisions they may give in respect of the young warriors. It may be said that serious crime in the Masai Reserve is rare, and that there are not more than three or four cases on record, since European administration was established, when the attitude of the "Muran" gave cause for anxiety and in no one of these cases did a disturbance of such magnitude occur as to render necessary a recourse to armed force to quell it. Politically, the Masai have remained loyal to the British Government since they first encountered it, and except for isolated instances where certain sections attempted to help the allied cause and to increase their herds by the despatch of raiding expeditions against German territory, their conduct throughout the trying period when the war in East Africa was on their borders was exemplary. Nevertheless, a catalogue of the misdeeds of the Masai will show a not inconsiderable number of instances

[674] Crime in the Masai Reserve.

648 674

* The Masai have rendered assistance in the capacity of native levies on the following occasions:—

(1) Nandi Expedition, 1895. 40 Moran.
(2) Nandi Expedition, 1900. 400 Moran.
(3) Mareka Patrol, 1902. 300 Moran.
(4) Tana Operations, 1902-03. 300 Moran.
(5) Island Patrol. 400 Moran.
(6) Kaibwaron Patrol, 1904. 100 Masai and Nandi.
(7) Sotik Expedition, 1905. 400 Moran.
(8) Kisii Patrol, 1906.
(9) Nandi Expedition, 1905-06. 600 Moran.
(10) Present Turkana operations.

Reports on the work of these levies have on the whole been highly satisfactory, except in the present Turkana operations where it is doubtful if the pastoral Masai have been used, and in the Kaibwaron patrol, where it was found that the Masai spearmen were of little use against the Nandi in forest country.

"The political and military organization of the Masai has been so fully described by the various travellers, notably Mr. Thomson, who have made it their study, that it is unnecessary for me in this report to reproduce the information which writers with far greater knowledge than I can pretend to possess, have already supplied on this subject. There seems, so far, but little hope that this wild people will, as a whole, be weaned from their predatory mode of life, and induced to become peaceful cultivators: though a few of those settled at Ngongo Bagas have recently begun to take to agriculture, under the supervision of the local officials. 648* 175

"The total number of the Masai in the Kenia district, including the Wanderobbo, is estimated by Mr. Ainsworth at 23,000. Those in our settlement at Ngongo Bagas include 632 'Elmoran' or warriors under 20, commanders or 'Legonans,' and about 4,000 old men, women and children." [162]

In another part of this report Sir Arthur Hardinge writes as follows:—

"Mr. Gilkison, when in charge of Kikuyu, introduced the practice of employing Masai runners to carry the mails, and they have proved, I believe, very satisfactory, covering the 150 miles of the third stage in five days. The average total time taken to transport the mails from Mombasa to the Ekloma Ravine, a distance of 495 miles, is twenty days, or about 24¾ miles a day. The weight of each load of mails is 30 lbs." [482] [484] [464]

In a subsequent passage, dealing with the slave-trade, Sir Arthur Hardinge writes:— 648* 175

"The trade in Ukamba is confined to the district of Kitui, ... and is chiefly in Masai women and children. 567

"Its origin is as follows: When the Masai of Mount Meru, near Kenia, were decimated about four years ago by an epilemic of small-pox, following upon a severe cattle plague, which obliged their varriors to go long distances to raid for cattle, and thus leave their kraals almost undefended, the Kikuyu people, their hereditary foes, fell upon them in overwhelming numbers, massacring their old men and carrying off their women and children as slaves. These they are now selling at low rates, having more of them than they want, to local Arab or Swahili middlemen, who, driven by our anti-slavery laws from the coast, can only carry on their trade with safety in inland districts as yet unoccupied by us, and who retail the slaves thus purchased at a profit to the natives throughout eastern Ukamba, these latter people being all themselves free, and therefore requiring to be supplied with such slaves as they may need from other tribes.

"Some of the Masai girls are kept by their Swahili purchasers as concubines, and these, when they have learnt in a year or two enough Swahili to pass in the Swahili dress as coast women, will go down with their masters to the coast, where a few of them (not having borne children) may be secretly sold to other Arabs or Swahilis, but Mr. Sub-Commissioner Ainsworth, who knows Ukamba well, assures me that they nearly all remain in Ktui, and doubts whether fifty of them in a year even leave it."

Referring again to the activities of Sendeyo, Sir Arthur Hardinge wrote:— 648* 175

"Of late there have been symptoms of unrest among the Masai, which have made it necessary to keep a careful watch on them. Sendeyo, Chief of the Loita division of the race, who wander sometimes in English and sometimes in German territory, has been endeavouring to persuade his brother Lenana, the Chief of the Masai of Naivasha, all of them on outside of the border, to join him in a general movement against the Germans in Kilimanjaro, who recently chastised a local tribe of Masai, the Wa-Arusha, for the murder of two German missionaries.

"In anticipation of trouble in this quater, I sent reinforcements to Taveta, and the simultaneous arrival of troops from Uganda at Naivasha and at Ngongo Bagas from Machakos seems to have induced Lenana to decline Sendeyo's proposals, which, though primarily directed against the Germans, really aimed at a general rising against all European control."

The following quotations are made from the Protectorate Annual Report for the year 1903-1904 :— The year 1903-1904. 648* 175

"About the beginning of September last, it was reported that the Masai contemplated a wholesale raid into the Kisii country; the adoption of prompt measures, however, both in this province" (Ukamba) "and at Naivasha, prevented any carrying out of their intentions. Since that time they have been quiet, with the exception of a party belonging to the Matapatu section, which secretly organised a small expedition some two or three months ago: the kraal concerned was fined, and the 'laganan,' or head warrior, is now a fugitive, the raid having been unsuccessful. With the exception of these two incidents, the conduct of this tribe has been satisfactory. . . . . ."

"Nothing of great political importance has occurred in this district" (Naivasha District, Masailand) "during the year. In the autumn of 1903, the Masai held a large circumcision festival on the plains of Kinopop (or Kinangop). This was attended by several thousand tribesmen, and it was thought by some that the event would be commemorated by the dispatch of a large party to raid Lumbwa, Kisii, and, possibly, the German territory at the back of Shirati. Though the idea was discredited by those on the spot, it was considered advisable to make a military demonstration in the neighbourhood of Naivasha to discourage any breaches of the peace. At any rate, the ceremonies on Kinopop passed over without incident. Curiously enough, about this time, a large war party of Masai did make a raid on the country east of Shirati, but, owing to warnings sent by us in anticipation of such an event, little damage was done, and the raiders were dispersed by the German troops. Our German neighbours appeared to be under the impression that Sendeo organised this raid, but what 'elmoran,' or warriors, formed the war party seems to remain in obscurity. The elders of what may be termed the Naivasha Masai are undoubtedly loyal, and will do their best to discourage raids by the elmoran. [561]

"The executive officials in this district who may be considered to be in the confidence of the tribe, report that the elders discuss the question of raiding quite frankly, and often enquire what is to become of the poorer elmoran, who have no live-stock, and thus cannot marry and settle down as 'Elmoru,' or Elders, and now raiding is forbidden, do not see how they are to acquire wealth. Numbers of these earn a bare livelihood by herding the property of their richer friends, others serve in the King's African Rifles and police force, and those in regular Government employ, steadily save enough to start them in married life. It is probable that a partial solution of this problem lies in the formation of a labour bureau, the object of which will be to find suitable employment for the poorer elmoran and 'laiok,' or youths, who have not attained the status of warrior." 648* 175 178 46A

As distinct from the Masai Moves, the history of which forms the subject of Chapter III., the early history of the Masai contains little further of interest. The administrative steps which have been taken on their account from time to time have been treated separately in the following chapters, and Masai raids may be said to have ceased after the year 1902, the last year in which they carried out a successful expedition against another tribe in the Protectorate. Their more recent raids against German territory, are referred to in Chapter VII. Conclusion. 648* 175

With regard to the potentialities of the Masai as a tribe, it must be borne in mind that the total population of the Masai in the Masai Reserve numbers no more than 43,000. Of these, it may be assumed that about 20,000 are males of all ages, while some 4,500 are Muran. Taking the proportion normally maintained among other native tribes, for which more accurate statistics are obtainable, it is found that approximately 10,000 males are boys under the age of the Muran class, while the remaining 5,500 are elders. It will thus be seen that the tribe under consideration is relatively small in regard to population, and that, therefore, specialization will be necessary if the attributes of the tribe are to be utilized to their fullest capacity. Population. 162

Sufficient has already been said of the conservatism and slothfulness which are the dominating characteristics of the Masai. The state of idleness in which both young and old live has proved a barrier to progress which has resisted all efforts made in the past to introduce development on civilized lines. The only measure which has attained to any degree of success in the establishment of trading centres, where a carefully controlled trade has opened the eyes of the Masai to a small extent to the advantages of imported articles, and has created some desire on their part to invest a proportion of their enormous capital in trade goods. Even so, it appears that they have not been induced to desire anything more progressive than flour, sugar, and honey in the way of food, and such imported articles as umbrellas, blankets, cotton sheeting, knives, axes, and cooking pots. They are still in a most primitive state. Conservatism. 181

The semi-military organization which has been handed down by their ancestors is still preserved, and continues to act as a deterrent to any innovation. Now that raids are ended, the Muran have nothing to occupy their attention, and it is this fact that has rendered it necessary to consider the possibilities of developing them into useful citizens along a definite line of policy, rather than to adopt merely normal administrative pressure, which has been so successful among the other tribes of the Protectorate. Of their own free will, the Masai will do nothing except fight with the weapons they know, and the young men of between sixteen and twenty-five years of age have now no occupation of any description. It is on behalf of these youths, the Muran, that the first steps in the necessary policy must be taken. Employment for the Masai. 178 464 561

It is known that, by their training from their earliest years, the Muran are experts in the handling of stock. Each boy has been accustomed to herd hundreds of head of cattle since the days when he started to walk, and there is probably no other nation in the world that can boast such a measure of success in this branch of knowledge. But, after circumcision and the assumption of the status of warrior, the youth leaves the care of stock to younger boys, and his ability in this direction is thereby wasted. Stockmen. 464 561

It is said that about fifteen per cent. of the Masai of the Muran class are employed by various farmers in herding cattle, but, even to this extent, the value of their services is largely discounted by the aversion which they show to the performance of work which they consider to be derogatory to their dignity—and the limits of what is not undignified are very materially confined. Manual labour of any kind is regarded as objectionable, and the Masai are physically incapable of carrying loads. But, if they are given a wage high enough to satisfy their avarice, if they are considerately treated, and if they regard the climate of their employer's land as suitable, they cannot be improved upon as cattle herds. On European farms. [461] [147]

In normal times, the number of settlers in the Protectorate who would make use of this class of labour is not large, and the demand for public purposes is smaller still, while the utility of the Masai as a whole in this connection is greatly diminished by their dislike of working for a European whom they do not know, and by the weakness of their constitution, which renders them suitable for work in a restricted area only. In order to make the Masai suitable for general employment even as cattle herds, therefore, it is necessary either to alter their conception of their dignity so as to make their services of more general application, or else to insist on their performing for a smaller remuneration the work that they will consent to do. Demand for such labour.

464
561

It seems doubtful if either of these courses can be pursued without exercising stronger measures than persuasion, for this latter has not been lacking in the past. The numbers of the tribe being so small, it would certainly appear to be inadvisable to compel the Masai to undertake agricultural labour for work outside the reserve, as such a step would be sure to cause active discontent without adequate results, but there also seems to be no reason why these expert herdsmen should not be made to exercise their talent to the exclusion of the inferior material obtainable from other tribes. Herdsmen are of essential service to many farmers, and from among the Masai can be drawn some of the best herdsmen in the world.

Employment in K.A.R. or Police.

The reputation for cunning, organisation, and militarism which the Masai have enjoyed in the past has also led to consideration of the possibility of utilising these powers under modern conditions, by enrolling a number of Murran in the King's African Rifles and Police. Experiments have been tried in this connection for more than fifteen years, but, save for some individual exceptions, they have proved unsuccessful. One or two Masai have succeeded in passing the necessary tests have developed into reliable efficient soldiers and policemen, but, in spite of repeated trials, the majority, discharged as unlikely so to develop, have been turned back to their kraals and represent so much time, labour and money wasted. Such soldiers [illegible] discipline appears to the Murran to be too nearly akin to work to be acceptable to them, and they adopt from the first an attitude of passive resistance and listlessness, the exact opposite to that keenness which is essential to successful development. So much has been learnt from past experience, and the compulsory recruiting scheme which is now being acted on, apparently with the consent and approval of the elders of the tribe, has not yet shown signs of any improvement in this attitude. It remains to be seen, however, whether this renewed attempt to break down the barrier of conservatism and sloth will be such as to induce the Murran to take part, as a matter of pride in their ability to do so, in a branch of utility for which their traditional training would appear admirably to suit them.

General employment of Masai.

The employment of the Masai Murran as herdsmen, or as askaris, seems to be the only obvious method by which they can be called on to demonstrate their position as an asset to the state outside their own reserve, and, provided that sufficient development can be procured inside the reserve, it would possibly be bad policy to insist on outside labour by any of the other classes of Masai males. It remains to consider what may be the best means of utilising their services within the confines of the reserve, and this question is closely connected with the potentialities of the Masai possessions.

*648
231
[454]

Masai stock.

The wealth of the Masai is entirely invested in stock, and is said to amount to the colossal figures of 715,000 head of cattle, more than 2,000,000 sheep and goats, and 10,000 donkeys. This stock is concentrated in a reserve of some 14,000 square miles in extent, of which part is waterless and unfit for stock, and of which part is regarded by the Masai as unsuitable for cattle owing to a suspicion of disease. These two actual and problematical disabilities combine to make the stock-carrying capacity of the reserve but little in excess of what it carries at present, and it is maintained that, without the provision of veterinary facilities, and without the undertaking of public works towards the better distribution of the water, the reserve is now so full that the annual death-rate cannot be less than the annual increase, or in other words, that the amount of stock owned by the Masai is now stationary.

Veterinary work.

As may readily be imagined, the problem of providing veterinary facilities for these vast herds presents such difficulties on account of its magnitude that very considerable increases would be necessary in the Veterinary Field Staff before anything but isolated attempts could be undertaken. This has been the main difficulty in the past, and must remain so at any rate until the cessation of war conditions enables the Government to augment its Veterinary Department by the addition of other qualified officers. Money has been voted in the Estimates for the financial year 1918-1919 for a commencement to a comprehensive scheme of veterinary research in the Protectorate, and these proposed activities affect the Masai Reserve in many ways. A dipping scheme is to be introduced which will,

*648
231

essential problem before the Government at the present time in dealing with the Masai is how to turn this annual increase into a realizable asset. The proposals for imposing upon the Masai a tax of two rupees per head of cattle per annum, approved by the Governor in January, 1918, fell through mainly owing to the impossibility of procuring a market for the quantities of almost worthless stock that would have been produced in payment, and it is difficult to see how this objection is to be overcome unless some much more marketable commodity is produced. Purchase by local residents and firms of the kind of Masai stock that would come in as a result of the imposition of such a tax would in all probability be very limited in extent, and no business firm has yet come forward with proposals for taking over such stock for canning or export by other means. It has not yet been proved or disproved that such Masai stock is marketable for the purposes of human consumption, but it is a fact that much of the stock from the Masai Reserve produced for slaughter by the military authorities was returned as unsuitable, and while it is extremely improbable that the Masai would be able to pay their tax in cash, it is only reasonable to expect that the worst stock would be paid in in lieu of cash where that was unobtainable.

Taxation.

Problem of taxation.

The problem, therefore, appears to be as follows. If the necessary staff is provided, a tax can be collected from the Masai at the rate approved which will bring in stock assessed at £100,000 annually. Of the money realized, £50,000 is to be devoted to works in the Masai Reserve which will so improve the conditions therein as will not only render it capable of maintaining a larger number of stock, but will also so alter the conditions as to make it probable that a higher grade of cattle could be supported in the reserve. When this last step has become effective, it may reasonably be assumed that a market will be forthcoming for the cattle paid in as a tax, but it is not yet proved that it will be possible to realize the value of the stock collected in the earlier years. A trial alone can demonstrate this.

*648

Masai as an asset to the Protectorate.

Enough may now have been said on the subject of the potentialities of the reserve, but it must also be borne in mind that, of the proposed cattle tax, one half of the proceeds are to be paid into the general revenue of the Protectorate, and that it is a matter of concern not only to the reserve, but to the Protectorate as a whole, that the proceeds of the tax should be forthcoming in the shape of a realized asset as soon as opportunity occurs. The Masai have hitherto paid a hut tax at the rate of three rupees per hut, which sum, amounting to less than £2,000 per annum, has not covered the cost of their administration, but the proposed tax will not only cover the cost of the administration of the reserve, but will leave a considerable balance for the general development of the Protectorate, while the needs of the Masai Reserve can be attended to to the fullest extent of which the staff is capable.

[E51]

461
469

Masai residing in the reserve.

Of the Masai residing within the reserve, the most that can be expected of those who are not tending cattle is that they will help in the performance of the public works which are destined to be undertaken therein. Hitherto they have not been employed on such works, as manual labour does not appeal to them, and it is indeed doubtful if such a change will be brought about in their temperament as to induce them to perform this. That the position may not be hopeless is perhaps suggested by the fact that certain sections of the Sonnali tribe who had until recently maintained an attitude similar to that adopted by the Masai, commenced manual labour last year, and a corresponding change for the better may still occur among the Masai.

177
[E41]

Power of the Masai.

Conditions have so greatly altered in the Masai Reserve during the last few years that the power of the medicine-men as a class has greatly decreased. The measures on education for the Masai may further enlighten them, may undermine their conservatism, and may encourage them to discard their prejudices. An organized movement to show the Masai the development that is going on around them and to drive home to them the fact that unless they progress they are bound to disappear in the circumstances attendant on the introduction of civilization may have its effect in eventually bringing them to a conception of their duty. The Masai problem has not yet been tackled, but the prospect of rendering them useful citizens of the Empire is not entirely without hope.

Masai for native service and other war work.

There are, however, one or two matters in which the Masai do not show to such advantage. Beyond their work in their own country as scouts and herds the Moran have not laid themselves open to recruitment for any purpose. It was not to be expected that these indolent storkmen would submit to recruitment for service as porters, for which work they are unsuited both by physique and temperament, but it would not have been unreasonable to assume that it might be possible to recruit them in large numbers for service as herds in the stock depots outside their own country. It appears that the Masai are strongly predisposed to residence in their highlands and practically no success attended efforts made to induce them to enlist in that capacity.

The experiments which have from time to time been made to obtain suitable members of the Moran class for service with the forces have already been described (*vide* Chapter VI., Section 6). The Masai are practically the only administered tribe in the East Africa Protectorate who have not assisted the allied cause in the field by the provision of recruits for the King's African Rifles.

Donkey boys.

Another matter in which the Masai have failed where they might have been expected to succeed was in the provision of donkey boys for transport work in German East Africa. As demonstrating the uselessness of the tribe it may be advisable to record at some length the steps that were taken in this connection.

In April, 1917, the military authorities asked for two hundred and fifty youths as donkey drivers and suggested that it might be possible to enlist a number of Masai for this purpose. The District Commissioner, Narok, replied that volunteers were unobtainable and that compulsion would be necessary to obtain such men. The Moran were about to begin their E-Unoto ceremony, and if compulsion were to be applied to obtain the younger men as recruits collection would necessarily be slow. Such recruitment would also be difficult unless high wages were paid as the Masai were accustomed to receive a minimum wage of ten rupees per mensem for work in any capacity at any place.

[465]

In reply to a query from the Military Commissioner for Labour, asking if the provisions of the Native Followers Recruitment Ordinance could be applied to the Masai Reserve, the Officer-in-Charge replied that they could be applied to the uninitiated youths the oldest of whom were of age for circumcision. The application of the Ordinance to the Moran at the time when they were about to commence their ceremony would awaken strong opposition from them as well as from the Chiefs, Headmen and Elders. It will be remembered that the E-Unoto ceremony had about that time been the subject of considerable negotiations in reference to the claim to Kinangop and Mr. Hemsted thought that a further delay in the performance of the ceremony which would be necessitated by such recruitment would be inadvisable for political reasons.

Endeavours were made to obtain suitable recruits but the number forthcoming was inconsiderable. In the past no compulsion had been brought to bear on the Masai to go out to work, very few settlers had much use for them, and those who did employ them were rather inclined to treat them as pets. In consequence the Masai were very reluctant to come forward to work under the very much less favourable conditions proposed. Volunteers for work as donkey boys in the Carrier Corps were quite unobtainable and Mr. Hemsted considered that the application of the Ordinance would be difficult and probable ineffective. The Masai would willingly pay ten times the maximum penalty allowed rather than do any kind of work they disliked or considered derogatory to their dignity and he was of the opinion that they would also prove extremely unsatisfactory for the class of work required. It was doubtful if they possessed constitutions strong enough to stand the climate or arduous conditions combined with a radical change in their usual diet and he thought that desertions would be frequent. Work such as that in the Carrier Corps would be too sudden a change from their present conditions and if the Masai were to be brought into line with the common policy and compelled to prove their usefulness he considered that some other kind of employment more in accordance with what they were fitted [illegible] which we'd be less disagreeable to them should be found for them in the first place. The transition from a life of ease and idleness combined with a plentiful diet of milk

[441]

*648
46A

and must should be more gradual. Mr. Hemsted also drew attention to the fact that some time previously a suggestion that compulsory service should be applied to the Moran was vetoed by the Governor on the grounds that it might lead to possible complications in the future. The same objections appeared to him to apply but in a greater degree to compulsory service in the Carrier Corps. If however it was considered that the Masai must necessarily be obtained in the latter capacity he thought that the Moran were obviously the class to be employed. The Elders and the boys were according to Masai custom moderately industrious in their own country and performed the duties of headmen and councillors whereas the Moran led a life of absolute idleness. He did not consider that the E-Unoto ceremony was of sufficient importance to interfere in any way with the requirements of the Government and he thought that it would be by no means a bad thing if the Masai were brought to realize that Government necessities must take precedence over unessential ceremonies. He therefore considered that, if it were necessary compulsorily to recruit Masai for the Carrier Corps, such a scheme should be applied to the Moran only, but he also stated that it would be impossible to obtain the men without recourse to press-gang methods and that the assistance of at least a company of King's African Rifles would be required. Employment of the ordinary police and tribal retainers in small numbers to round up the Masai in their own villages would lead to trouble and probably to armed opposition. Unless the Government was prepared to enforce such a measure at all costs he would hesitate to recommend the application of the Native Followers Recruitment Ordinance to the Masai.

As a result of Mr. Hemsted's representations no steps were taken to procure donkey drivers from among the Masai and none came forward voluntarily.

*648 Recognition of war services rendered by Masai Headmen.

In October, 1918, a suggestion was made by Mr. Ainsworth that a special medal should be struck off for presentation to native chiefs and headmen who had rendered special service during the war. The Secretary of State expressed himself in sympathy with the proposal, and requisition were accordingly made from the provinces as to the names of natives whose services were worthy of such recognition.

The Officer-in-Charge of the Masai Reserve submitted certain names, which, after consideration by a committee appointed for the purpose, were forwarded to the Secretary of State. The names so recommended, with the services rendered, are as follows:—

FOR A MEDAL OF THE FIRST CLASS.

SENDE: Paramount Chief of the Masai.

For the influence exercised by him in his position as paramount chief of the Masai, in assisting towards the collection of cattle and sheep for military supplies, and the recruitment of scouts for the Intelligence Department, also for the measures taken by him to secure to us the support of the Masai resident in German territory.

SENDEU: Chief of the Loita Masai.

For unswerving loyalty in resolutely repelling advances of German Agents endeavouring to influence the Masai, and for co-operation and assistance given to the Intelligence Department.

NAMAYA: Masai Headman.

For assistance given in obtaining supplies and for using his influence to induce his Morans to work as scouts.

LENGAMERI: Masai Headman.

For loyalty and assistance to the Government during the war. By his example and energy he kept his people in good order, and he assisted in obtaining scouts and messengers, as well as in feeding the various intelligence posts on the border.

/60 cont./

551 Third names for girls: Ilig or = the sweeper, from a-ge, to sweep: Lesalj, Ol ginje, Nabelt, after like-named trees: Lewhan, from ewhan or ehan = to rain through into the house: En gulut = the way: Betate = the one who fell down (a-batat = to fall: a-debetate = I have fallen): Mbui, after a similar sounding call with which one calls back the goats and sheep that have strayed from the herd in the pasture: Kutu = the thick-boned one.

[103] Names that women received after their marriage are: Ilig arur' ai, that is, the wife who comes from the Arusa area, as the Maasai call the Gepu-Arusha /Great Arusha/ area at Meruberg /Mt. Meru/, where many Maasai found refuge in the famine. Ili giechow, after a former great warrior named Ol giechow: similarly formed Ili giechon from Ol giechon.

VII.

000 Circumcision of the boys. -- Point in time. -- The circumcision years, festivities at the end of them. -- Day of circumcision. -- Operation. -- Pain. -- Behavior of the circumcised until the healing of the wound. -- Circumcision of the girls. -- Point in time. -- Operation. -- Behavior of the circumcised until the healing of the wound.

881 According to the belief of the Maasai, circumcision was introduced
[815] by a command of God. After circumcision boys and girls are regarded as adults. The former are supposed to be circumcised as soon as they are strong enough for participation in a war expedition, that is, at the age of 12 to 16. Sometimes it is somewhat earlier, if the boy is particularly well developed, somewhat later if the father, lacking any other labor force, cannot spare him in the tending of the small livestock. Circumcision takes place latest for poor sons of poor people
[422] or for propertyless orphans. Namely, for the great feasts held by the circumcised youths each one in turn has to provide a head of cattle: he must therefore either own it himself or have a father who will give it to him. If he lacks both, the boy first tries to acquire a small stock
[884] of cattle by tending herds for the well-to-do, and until then he remains uncircumcised. Such boys are called ol ainiki ŋ giechu. This word means "herdsman," but signifies that it is a matter of someone who tends the livestock of other people for pay, like the Biblical word "hireling."

/118 cont./

177 181 609 466 this and discovered to his sorrow that the cows had wasted away in the last few weeks to the point of being unrecognizable. If he had examined them more closely, he would also have found that they had aged several years in the preceding month. But he had no thought of any dishonesty of the people, whom he considered honorable and good, until after more than 150 of his finest cows had been exchanged for old, worthless ones and he had unexpectedly marked 42 of the latter. One could cite a whole series of such examples instructive for the settler, but here let there be pointed out only one particularly popular trick: When in the evening the livestock of the settler is driven to water, the native stock-owners -- both Masai and Nogwan -- also like to drive their herds into the vicinity of this watering place. In the press and haste of the livestock for the water, there run into the herd of the Europeans, as intended, a few head of the cattle of the Black, who now, instead of taking his stock out of the strange herd again, move off with a corresponding number of the settler's best cattle.

177 181 484 609 [illegible] When the Masai servant who regularly invested his savings in cattle has assembled a small herd, he often enough leaves service in order to return again to his people. If an opportunity presents itself, it may happen that he now serves his compatriots as a spy against his former master. Uncircumcised youths who live themselves out as boys return to their native kraals for circumcision. Live there a few years with their contemporaries in the usual manner, and then often go back into service.

177 181 609 829 The Masai living in the tribe is and remains mistrustful of every European whom he has not become intimately acquainted with through the years. He regards the latter's honesty and forbearance as weakness and believes that it is only because of a lack of strength and cleverness that the Europeans does not oppress him just as he himself does this with the Nogwan. He performs a service for the European only in order /119/ to have some -- often enough illegal -- benefits from it. If he concludes friendship with him, it is done merely for the sake of appearances and a momentary advantage. As one accused, he almost never confesses, even with guilt proved, but rather, reacts with profound indignation: "A Masai does not do anything like

In Mallin G-9 (ca. 1896-1904) 1910 FL12 Maest FL12

Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as *ol-ngoi, ol-le-ngoi-yeu* etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat, or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property. A boy or man can go to his father's or paternal uncle's kraal and take or demand a goat or milk, and in all probability nothing would be said, but if it were done repeatedly the father or uncle would express dissatisfaction or refuse altogether. A man may also go to his sister's husband or wife's brother (*ol-ngoitoi*) and take anything, but an account is kept and the debt has to be returned. If a man is poor it is customary for him to live with one of his brothers-in-law (*ol-ngoitoi*) and help to look after the stock. He is fed for his trouble, and no payment receives less out of every pair of twin goats born.

First cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is on women than *ol-le-ngoitoi* (or *ol-ngoitoi*). Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always contingent on the two parties not belonging to the same sub-class.[1] The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. No warrior may select as his

[1] The Masai are divided into five clans: *Il-Aiser, Il-Kidongoi, Il-Sebeiot, Il-Dikirjeri*, and *Il-Purkeiti*. Each clan is again divided into sub-clans, e.g. the *Il-Aiser* contains amongst others the following: *Il-gilidoi* and *Il-Purkeiti*. Its sons belonging to the *Il-gilidoi* sub-clan may take as wife the daughter of a man of the same sub-clan, but he may marry the daughter of the *Il-Purkeiti* or he may marry a daughter of the *Il-Kidongoi, Il-Sebeiot, Il-Dikirjeri*, or *Il-Purkeiti* clans. Members of the various sub-clans are usually to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same lawful marital relations in all the sub-districts as he has in his own home sub-district.

In his recent book, *The Ethnology of the A-Kamba and other East African Tribes* (Cambridge, 1910), Hobley states (p. 101) that the restrictions governing marriage amongst the Masai are far from simple, and he gives a number of complicated instances. As a matter of fact the rules are quite simple if one remembers (1) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (2) that no man may marry a nearer relative than a third cousin, and then only if the terms of relations such as *ol-le-ngoitoi* and *ol-ngoitoi*.

There are, however, one or two matters in which the Masai do not show to such advantage. Beyond their work in their own country as scouts and herds the Moran have not laid themselves open to recruitment for any purpose. It was not to be expected that these indolent shepherds would submit to recruitment for service as porters, for which work they are unsuited both by physique and temperament, but it would not have been unreasonable to assume that it might be possible to recruit them in large numbers for service as herds in the stock depots outside their own country. It appears that the Masai are strongly predisposed to residence in their highlands and practically no serious attempts were made to induce them to enlist in that capacity.

The experiments which have from time to time been made to obtain suitable members of the Moran class for service with the forces have already been described (*vide* Chapter VI., Section 6). The Masai are practically the only administered tribe in the East Africa Protectorate who have not assisted the allied cause in the field by the provision of recruits for the King's African Rifles.

Another matter in which the Masai have failed where they might have been expected to succeed was in the provision of donkey boys for transport work in German East Africa. As demonstrating the aspirations of the tribe it may be advisable to record at some length the steps that were taken in this connection.

In April, 1917, the military authorities asked for two hundred and fifty youths as donkey drivers and suggested that it might be possible to enlist a number of Masai for this purpose. The District Commissioner, Narok, replied that volunteers were unobtainable and that compulsion would be necessary to obtain such men. The Moran were about to begin their E-Unoto ceremony, and if compulsion were to be applied to obtain the younger men as recruits collection would necessarily be slow. Such recruitment would also be difficult unless high wages were paid as the Masai were accustomed to receive a minimum wage of ten rupees per mensem for work in any capacity at any place.

In reply to a query from the Military Commissioner for Labour, asking if the provisions of the Native Followers Recruitment Ordinance could be applied to the Masai Reserve, the Officer-in-Charge replied that they could be applied to the uncircumcised youths the oldest of whom were of age for circumcision. The application of the Ordinance to the Moran at the time when they were about to commence their ceremony would awake strong opposition from them as well as from the Chiefs, Headmen and Elders. It will be remembered that the E-Unoto ceremony had about that time been the subject of considerable negotiations in reference to the claim to Kinangop and Mr. Hemsted thought that a further delay in the performance of the ceremony which would be necessitated by such recruitment would be inadvisable for political reasons.

Endeavours were made to obtain suitable recruits but the number forthcoming was inconsiderable. In the past no compulsion had been brought to bear on the Masai to go out to work, very few settlers had much use for them, and those who did employ them were rather inclined to treat them as pets. In consequence the Masai were very reluctant to come forward to work under the very much less favourable conditions proposed. Volunteers for work as donkey boys in the Carrier Corps were quite unobtainable and Mr. Hemsted considered that the application of the Ordinance would be difficult and probable ineffective. The Masai would willingly pay ten times the maximum penalty allowed rather than do any kind of work they disliked or considered derogatory to their dignity and he was of the opinion that they would also prove extremely unsatisfactory for the class of work required. It was doubtful if they possessed constitutions strong enough to stand the climate or arduous conditions combined with a radical change in their usual diet and he thought that desertions would be frequent. Work such as that in the Carrier Corps would be too sudden a change from their present conditions and if the Masai were to be brought into line with the common policy and compelled to prove their usefulness he considered that some other kind of employment more in accordance with what they were fitted for and which would be less disagreeable to them should be found for them in the first place. The transition from a life of ease and idleness combined with a plentiful diet of milk

7: Hailey C-4 (No date) 1950 FL12 Masai FL12

authority always tended to break down in face of the lawless and independent spirit of the Maasai. In 1928 the Headmen numbered 46, of whom 28 were unpaid, and 18 received pay ranging from £6 to £36 a year, the former Paramount having a special pay of £90. Fourteen of the 18 paid Headmen were presidents of the Native Councils, and following the custom adopted in many other parts of Kenya, they were given the courtesy title of Chief.

SUBSEQUENT CHANGES IN THE SYSTEM

In the period that has passed since this system was introduced, there have been changes which have to some measure affected the structure of Masai society. The restraint exercised on cattle raiding has robbed the military organization of its former importance, while the growing value of cattle and dairy has enhanced the position of the wealthier stockholders, who now constitute, together with some men of hereditary prestige, an aristocratic element with an acknowledged leadership in Masai society. In other respects the Masai hold tenaciously to their customary institutions and mode of life, and the Maasai in particular retain the tradition of indiscipline (in all but a military sense) and the aversion to labour which characterized them in the past.

The Government has in the interval effected changes also in the system of native administration above referred to, with the view of adjusting it more nearly to the pattern followed in other parts of Kenya. The Central Masai Council and the 14 Native Councils gave place in 1939 to two Local Native Councils, at Narok and Kajiado, which have now been formally constituted under the provisions of the Native Authority Ordinance of 1937. The system of tribunals has also been revised, as will be further explained below.[1] The Headmen have been divided into two grades, Headmen and subheadmen, of whom the former have the courtesy title of Chief. They now derive their powers from the Native Authority Ordinance of 1937.

The 16 Headmen have a pay ranging from 15s. to 70s. a month, and the 28 subheadmen a pay ranging from 10s. to 30s. 30 cents a month. Practically all the Headmen or subheadmen are stockholders, and represent the ruling Age-Grade in each of the different Sections; very few of them are educated or literate and only a few can speak Swahili. The Headmen and subheadmen constitute the executive agency of the District administration and of the Local Native Councils, and they are in addition charged with the collection of the native Poll Tax. That is a task which they are said to discharge with some efficiency, though as will be shown subsequently in dealing with the administration of the Tribunals, there are numerous cases of the evasion of tax. The Chiefs can call on the services of a small number of Tribal Police, recruited and controlled by the District Commissioner. Up to 1943 the Tribal Police were the only force of this nature in the Province, but since that year a unit of the Kenya Police Force has been stationed in the Narok district, largely in view of the prevalence of stock thefts.

THE LOCAL NATIVE COUNCILS

Of the two Local Native Councils, that at Narok has 10 nominated and 13 elected members, and that at Kajiado 10 nominated and 14 elected. There is, however, little difference in practice between the nominated and elected members, since all are in fact selected by the District Commissioner after

[1] Page 173.

7: Bailey G-4 (No date) 1950 FL12 Masai FL12

THE ORGANIZATION OF THE NATIVE TRIBUNALS

As regards the administration of native justice, reference has been made above to the introduction of the system of Native Tribunals in 1918. It became obvious that these Tribunals were not generally recognized by the Masai, who preferred that such issues as arose between them should be settled in the customary manner by the Headmen or Elders. At present there are only two regularly constituted Tribunals in the Narok and two in the Kajiado District, with an Appeal Tribunal in each district.[1] Three of these Tribunals consist of a permanent salaried President and three salaried Tribunal Elders, taken from a panel of eight to twelve Elders; in Ngong the Tribunal has five Elders. The Tribunal Elders represent different tribal Sections and are nominated by the District Commissioner after consultation with the Headmen and tribesmen. There are still a few Chiefs on the Tribunals, but in accordance with the policy followed elsewhere in Kenya, these are now being removed. There is in addition a loosely constituted Tribunal in the Loita with a President and an indefinite number of members, but they only hear a small number of cases a year. 692

Two of the Presidents receive salaries of 30s. and 17s. a month; the others a sitting fee of 10s. a day. In two Tribunals the Elders receive 40s. a month and 18s. a month; in the others they receive a sitting fee of 3s. a day. The Appeal Tribunals are composed of members of the Local Native Authority Councils detailed at each sitting of the Council to hear such Appeals as are pending, an unusual but apparently a satisfactory arrangement. [465]

The preference for referring cases to the arbitration of local headmen or elders persists, and the civil issues which come before the regular Tribunals are few in number and refer mainly to matrimonial issues. In 1946, for example, the Native Tribunals dealt only with the following cases:— 691 692

	Number of Original Cases	Appeals to Native Appeal Tribunals	Appeals to District Commissioners	Appeals to Provincial Commissioner
Civil	189	90	6	3
Criminal ..	55	Not Available	..	..

These figures exclude, however, the large number of cases referring to breaches of the Poll Tax Ordinance, which in Narok alone were over 300 in 1946 and over 1,500 in 1947.

Judging only from such figures as are available for the appeals to Administrative Officers, the decisions of the Tribunals appear to have been generally accepted, but it is difficult to arrive at any judgment on the matter in view of the restricted field of civil issues or of true criminal issues which have come before the Tribunals. In paragraph 417 of his study of the Kenya Native Tribunals Mr. A. Phillips has called attention to the necessity for a close supervision over the exercise of criminal jurisdiction by Tribunals such as these, which are still at such a rudimentary stage of development, and he further points out that in civil issues this is in particular necessary in order to prevent 695

[1] These elements differ from those given on page 150 of the Report on Kenya Native Tribunals, A. Phillips, 1945.

/7 cont./

000 against the former. The El kuafi recognized the chief (ol oiboni)
174 of the Masai as also their own and seem for a long time to have
184 been on the best of terms with them. Then -- so the tradition
669 tells -- a girl named Matangé, from the family of the ol oiboni
619 Sinonik -- she is usually designated as his sister, more rarely as
726 his aunt -- took a fancy to a member of a legation of El kuafi
[173] warriors sent to Sinonik and went away with her lover. When she
bore him a son, the El kuafi proclaimed him their ol oiboni and
at the same time refused to obey Sinonik. With this the wars began
between Masai and El kuafi. They lasted -- so it seems -- the
entire first half of the nineteenth century and occurred sporadically
even in the second half of it. One of the decisive battles was at
Kisongo, a six-hour march west of Meruberg /Mt. Meru/, where
later on the chiefs of the Masai took up their permanent /8/ resi-
dence. The ones driven away went into the rugged forests of
• [466] Meruberg, where they lived for a long time in constant strife with
the Masai, until the chief Mbatyan completely subjugated them
and forced them into compulsory service. Other battles took place
near Ngurumán, north of Lake Natron; the rest of those conquered
still live there, mixed with Waseguju from nearby Soujo. The
[361] remnants of the ones defeated in the Serengeti steppe are still to
be found in Toveta, Kabe, Arusha-uchini. The first battles
between Masai and El kuafi probably took place in the vicinity
of Kenia /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe area Sogonoi;
the ones conquered fled to Ngujuka and then farther to Usegoha
and Mahga, where they founded a settlement under the chief
'Lemá.

The Masai took a few individuals from among the defeated
174 into their community. The rest split up. One -- larger -- part
184 became sedentary and formed some colonies in the vicinity of
619 foreign tribes or merged with other tribes. Another -- smaller --
[361] part at first made a living for a time from hunting, until it
[721] succeeded, by means of raids against sedentary peoples, in coming
[231] into the possession of livestock again. Today they again live
[101] wholly as before and are distinguished from the Masai only by

/19 cont./
was followed by Subet and the latter by Mbatyan. After the latter's death the Masai split up. One part placed itself under Lenana, the eldest son of the principal wife, who was born before the accession of Mbatyan, the other under Zendeo, who was the old man's favorite son and named by him to be his successor. The people relate that Lenana cheated Zendeo out of the succession in a way similar to how Jacob cheated Esau out of the right of the first-born. Whereas the deception was achieved in the latter case through the tied-on goatskin, it was made possible in the former case by the gloom of the hut in which old, weak Mbatyan was lying on his sickbed. He thought he had Zendeo before him and instructed Lenana in the secret arts of the ol oiboni. The two are now bitter enemies, who maintain a continuous civil war, to the misfortune of the Masai people. Lenana, now a man about 40 years old, lives with his followers in British East Africa, in the vicinity of the railroad station Nairobi, whereas Zendeo, ten years younger, inhabits, with his herdes, the steppes of German East Africa. Both are merely phantom figures in comparison with their father, who had occupied an outstanding place in the succession of chiefs. Under him the Masai experienced their last golden age. After his forefathers Sitonik and Subet had subjugated the Wakuafi, it rested upon him to keep down their constant uprisings and to weaken and enslave them so that no danger from them could threaten the Masai any longer. Through a well-organized spy system Mbatyan kept himself continuously informed about the conditions of his opponents, so that the rapacious warriors could always attack those very Wakuafi settlements in which a war expedition /20/ against the Masai was being prepared. The most trouble here was made by the Wakuafi of Meruberg /Mt. Meru/, who found safe hiding places for women and livestock in the clefted mountain forests, while the men undertook raids on neighboring Masai kraals. Finally, however, the Meru people were successfully mastered: indeed, they even became so pliable that they performed compulsory labor for their oppressors. One must bear in mind with what deep contempt all men of the Masai people look upon any kind of work, which they regard as something disgraceful, not compatible with a man's dignity, in order to

175
619 /20 cont./
791 understand what such a success meant. Mbatyan demanded thou-
727 sands of workers, and they moved obediently, in endless long lines,
• 466 men, women and children, toward the steppe area of Kisoŋgo, lying
[466]

791 west of the mountain, where the mighty one resided, like his
727 ancestors. There they had to dig a long water channel, whereby --
466 a further particular humiliation -- the men had to work in rank
[462] and file with the women. Encouraged by these and other successes,
175 the Masai became more and more arrogant, and they extended
648 their war expeditions farther and farther. It was not only the
721 Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

175 The belief in the magic means for healing purposes which
791 Mbatyan gave those seeking help, and whose chief ingredient
755 quantitatively was the vanilla-scented, pulverized wood of the
ol mogoŋgora liana, was so deep-seated in the people /21/ that it was often supposed to have actually brought to the people

466

As a servant of Europeans the Masai in general shows the same moral quality as the members of other tribes from the interior of East Africa (1).

> 1. I became acquainted with youths of ten different tribes of the interior. They are all quite considerably better, though also more inept in the beginning, than the brazen-impudent, conceited, and thievish nigger-dandy of the coast.

There is just as little domestic-servant faithfulness and dependability as there is constancy and gratitude for benefits enjoyed. An opportunity to rob the master is happily utilized; in the kitchen, meat, milk, and butter especially disappear. In the pasture the Masai herdsman draws off milk from the cows and blood from the oxen and sucks fat from the tails of sheep. One time the herdsman came home from the pasture in the evening, quite out of breath, and lamented that an elephant coming in the vicinity of the herd had scattered the cattle by its bellowing. In spite of a diligent search, two head of cattle were supposedly lost because of it -- two cows, of course! This was indeed very annoying, but was not to be altered, and I contented myself /118/ with ordering the herdsman to stay closer to the station with the herd. About eight days later the same incident -- ostensibly -- happened, and again it was two of the best cows. If that had gone on, we would have been rid of the entire herd in a few months. The warning had been useless, so the shepard was given a sound thrashing. And behold! From then on not only did the elephants remain away from the herd permanently, but even the cattle that had last disappeared showed up again. He had stolen them and given them to a friend for safe-keeping. Another case. A settler had a herd of fine select livestock about two hours from the farm in a secure palisade-kraal and in the care of a number of Masai in his service. A mark had been scratched into the hide of the cattle. One day the herdsmen brought a number of cows to the farm with the observation that the mark had grown over and would have to be cut again. The owner did

/118 cont./

177 181 609 466 this and discovered to his sorrow that the cows had wasted away in the last few weeks to the point of being unrecognizable. If he had examined them more closely, he would also have found that they had aged several years in the preceding month. But he had no thought of any dishonesty of the people, whom he considered honorable and good, until after more than 100 of his finest cows had been exchanged for old, worthless ones and he had unsuspectingly marked all of the latter. One could cite a whole series of such examples instructive for the settler, but here let there be pointed out only one particularly popular trick: When in the evening the livestock of the settler is driven to water, the native stock-owners -- both Masai and Negroes -- also like to drive their herds into the vicinity of this watering place. In the press and haste of the livestock for the water, there run into the herd of the European, as intended, a few head of the cattle of the Black, who now, instead of taking his stock out of the strange herd again, moves off with a corresponding number of the settler's best cattle.

177 181 469 609 [145] When the Masai servant who regularly invested his savings in cattle has assembled a small herd, he often enough leaves service in order to return again to his people. If an opportunity presents itself, it may happen that he now serves his compatriots as a spy against his former master. Uncircumcised youths who hire themselves out as boys return to their native kraals for circumcision, live there a few years with their contemporaries in the usual manner, and then often go back into service.

177 181 609 829 The Masai living in the tribe is and remains mistrustful of every European whom he has not become intimately acquainted with through the years. He regards the latter's honesty and forbearance as weakness and believes that it is only because of a lack of strength and cleverness that the European does not oppress him just as he himself does this with the Negroes. He performs a service for the European only in order /119/ to have some -- often enough illegal -- benefits from it. If he concludes friendship with him, it is done merely for the sake of appearances and a momentary advantage. As one accused, he almost never confesses, even with guilt proved, but rather, reacts with profound indignation: "A Masai does not do anything like

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drug, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oibani," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 224-230, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify. The medicine-men [291] The Laibon.

The process displayed by the pastoral Masai "Murran" in raids on surrounding tribes combined with their ceaseless activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the stocks which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911 but in the final move from Laikipia in 1912 and 1913, nearly 300,000 head was counted. By March 1914, all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 600,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. R. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,000 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains unoccupied on this account, no attempt having been made to utilize veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 45,000 souls, possess capital [illegible] amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilized tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock. The Masai as a stockbreeder. SECTION VII

THE MASAI EXTRA PROVINCIAL DISTRICT

GENERAL NOTE

MASAILAND constitutes an Extra Provincial District under an Officer in Charge, holding the powers of a Provincial Commissioner, with two District Commissioners, stationed at Kajiado and Narok. The legislation in force in other parts of the Colony applies to the District, but the Outlying District Ordinance, No. 25 of 1902, has also been applied to it, in order to provide a means for controlling immigration from other tribes, a matter to which, as will be subsequently shown, much importance is attached by Masai tribesmen. The area of the District is 15,177 square miles and the population was estimated in 1945 at 53,000.[1] The density is thus 3.4 per square mile. 631 [31] [61]

The Masai District contains in its more northern section a considerable area of land which ranks for agricultural or pastoral purposes with parts of the neighbouring Highlands reserved for European use, though it is to be noted that the rainfall here is more variable than in the central part of the Highlands. The lower parts of the District have a lower and even more variable rainfall, with the result that there is an area, conservatively estimated at a little over 3,000 square miles, which is arid and for all practical purposes waterless.[2] But the value of the large area held by the Masai is not to be judged by its agricultural possibilities, for if the Masai no longer justify the character assigned to them by history as "a virile tribe of predatory nomads," they have at all events maintained their traditional habit of life as a pastoral people, and though there is some cultivation in the Nairage-Ngare area and also near Ngong, this forms only an infinitesimal part of the District, and is for the most part carried out by Kikuyu immigrants on behalf of the local Masai. 311 132 311 563

It is of interest to note that in 1904 the number of cattle was estimated at only 50,000 and the sheep and goats at 600,000. This may have been an underestimate, though it must be realized that the country was still to some extent suffering from the effects of the great rinderpest epidemic of 1890, which had entailed such catastrophic results both on the numbers and the military power of the Masai. By 1914 the estimate had gone up to 600,000 head of cattle and over a million and half sheep and goats.[3] The Masai herds suffered severely in the drought of 1933 and 1934, when their losses of cattle were estimated at over a quarter of a million. But a recent estimate has put the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys. The further increase in the number of cattle is to some extent affected by the existence of fly, which is prevalent on the South Kavirondo boundary, in the extreme west, and also in the middle area, where the Kajiado and Narok Districts join. But if the present estimate of the stock is correct, 233 195 [131] 471 233

the Masai must, considering their small numbers, have a larger potential capital per head than any other tribe in East or Central Africa.

563 167 Practically the whole population may be said to belong to the Masai tribe, though there are a small number of immigrants, numbering rather less than one thousand in all, ninety per cent. being Kikuyu. As shown above, they are for the most part employed by the Masai in the cultivation of the small area of land used for agricultural purposes. There has been a certain amount of intermarriage, but the penetration of the country by the Kikuyu is viewed with distrust by the Masai, and three Alien Committees have lately been established in order to consider measures for the control of alien immigration. An area 631 167 of 47 square miles (known locally as Olengurumeni) within the Masai Native Land Unit was set aside in 1942 for "squatters" displaced from European farms, most of whom are Kikuyu.[1] But this area will remain politically separate, and it will not affect the position of the Masai as a homogeneous population.

563 Early records refer to the existence in Masailand of a number of Dorobo, of whom Masai tradition speaks as the original inhabitants of the country. When Europeans first came into contact with the Masai, part of the Dorobo were still leading a primitive life in the bush, while part served the Masai as herdsmen and in some cases had small herds of their own. These people have, however, now been absorbed by the Masai and are not readily distinguishable from them.

THE MASAI TRIBE

131 648 Reference will be found in the Chapter on Tanganyika to the circumstances in which the Masai tribe, as it existed in 1890, was cut in two by the international boundary drawn between Kenya and Tanganyika.[2] The area thus left to the Masai in Kenya, now estimated at 15,177 square miles, compares with the area of 18,470 square miles now held by the Tanganyika Masai, with [161] an estimated population of 50,168, and a density of 1.7 per square mile. The proceedings as the result of which the Kenya Masai were in 1911 placed in occupation of their present area have had a prominent place in the controversies connected with the alienation of native lands in the Colony, but it will be sufficient to refer here to the facts as summarized in paragraphs 633 to 674 of 631 648 the Report of the Land Commission of 1933.[3] The Masai lands are now held as a Native Land Unit under the terms of the Native Lands Trust Ordinance cap of 1938 and the Kenya (Native Areas) Order in Council 1939. There is, however, one fact which differentiates the Masai lands from those occupied by other tribes under the terms of this legislation, or those held by the Tanganyika Masai. Whatever the judicial value of the Agreements made with the Kenya Masai in 1904 and 1911, it is held, in the words used by the Governor of Kenya in 1948, that they "have the validity of a Treaty."[4] If so, the terms of the Order confirming the Agreement of 1911 constitute a moral obligation to the Government to reserve these lands for the exclusive use of the Masai, "as long

good management on modern ranching lines will bring him in hard cash.

I saw the ranch mainly from the air. Lines of bush, cleared by bulldozers dragging giant chains between them, lie neatly along the contour like windrows in a hayfield. Soon the six or seven thousand acres that have been cleared will be fenced, and so managed that star-grass will cover them and steers fatten twice as quickly as they normally do. The snag, of course, is the Masai indifference towards cash.

Yet even here the seeds of change begin to germinate. There are schools now in all Masai centres, Masai students at Makerere, the start of a trickle of Masai teachers, doctors, administrators, vets. One has a Cambridge degree in geography, one is a Legislative Councillor. The shell of Masai indifference has been pricked.

The puncture so far is tiny, but time will enlarge it and one day, not so far away either, the whole shell may crack. Already a Masai parson, the Rev. Daudi Mokinyo, has fenced off 2,000 acres of communal grazing where he fattens steers bred from improved bulls, has a simple milking hall and makes ghee. Elsewhere, half a dozen other Masai have fenced in grazing land. When the railway took a pipeline off Mt. Kilimanjaro, they set up watering points for Masai cattle along its course, and in return one section of the tribe, the Il Kisongo, agreed to operate a pasture-management plan, financed by a grazing fee, which is acting as an entry-point for new ideas.

When these movements spread, as they seem bound to do, the doom of the game will be accomplished. For game cannot co-exist with modern pasture management. Unless the Masai come to see game as an asset of high value, it will go here, as it has on European farms, and for the same reasons: it will go down before the fence, the improved pasture and the need to keep the land free of disease.

To admire pictures in the National Gallery, cathedrals of the Middle Ages or the antiquities of Greece is considered

Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,200 (2,420 according to the 1948 Census), and though they are of Masai stock, being descended from a Samburu mother called Il-Dogin, they have admitted a variety of refugees including Kamayo, and become rather mixed. According to one Hilkani they had originally four villages at the north end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokwa Island in Lake Baringo. They are expert swimmers and possess canoes, though one Hilkani saw none in 1937. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Ilyonga Kokwa" and "Ilyonga Ndogo" in the Tigitik valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and manyata and other ceremonies, and practise the "low-love" system of the pastoralists, though without the manyata. Today they have some 180,000 acres of poor land, most of it unfit for cultivation, but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Ilyonga was an important station on the caravan route, and one Hilkani noted that they had a large extent of cultivated land. This was divided into blocks (for ways of three to four miles square) which were interwoven by irrigation channels bringing water from dams across the river Tigitik. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the "sacrifice of a sheep at the mouth of the ditch." Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of fish and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.* They subsist on a diet of fish alone which, when Teleki and one Hilkani saw them in 1888, had produced no ill-effects, but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelubu blood in them.

The Il-Arum around Mount Moru are a large tribe of agricultural Masai, originally of Rombo stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Ilangayo in Southern Masailand are also to be classed as agricultural Masai.**

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Service Organization

Life Cycle

From birth to circumcision a male is a boy, *el-ayiok*. At circumcision* he enters an age-set and becomes a warrior, *el-moran*; "one who is circumcised," and may associate with uncircumcised girls. At the *el-gedet* ceremony he becomes an elder, *el-moran*. Warriors may marry when they become senior warriors. After the *el-gedet* the newly made elders attend to their family concerns, and get wives

piece of slaughtered livestock. She then generously distributes milk and meat and thus acquires the position of benefactress.

The arms and legs of a beauty, except for the thighs, are stuck into a more or less complete armor of tubes of iron wire, which often leave only the knee and elbow free, while strong power women this adornment double to a few coils. These tubes are called as *ngaigaf* = iron wire, and are differentiated according to their function as as *ngaigaf* of bracelet for the upper arm, as *ngaigaf* of *ngaiko* on the lower arm, as *ngaigaf* of *ovacher* = what is worn on the lower leg (below the knee). This ornament, like the neck spiral (as *ngaigaf* = *mum*), /140/ is wound directly onto the body part in question and can therefore not be taken off, but only unwound again, which usually does not occur until death. The weight
• [illegible] of the ornamentation seriously impairs the mobility of the women and not infrequently gives them a waddling gait.

Women in dance ornamentation wear around their hips a leather strap embroidered with small beads (*aly* *ga* *ta*[illegible] *aly* *gua* is *ay* *mop*, *ma* *hoiki* = the hip). Little girls also wear a
[illegible] like-worked strap; it then bears a row of small chains in front as a fig leaf and is called as *dard* (pl. *ma* *dardi*). Older girls and women wear around their hips an inch-wide belt likewise stitched
[illegible] with beads (Fig. 17), which holds the leather apron together. Boys and younger men often wear below the knee and above the calf a ring made out of white man's hide, with an and five centimeters long and one centimeter wide hanging down in front and in back (Fig. 50), and around each ankle a small bell (*ma* *dadi*, cf. /Figs. 39-41 appear here/ *dadidi* (Fig. 10)) tied on with a little strap, which, by its widely audible rattle in the silent *mapya*, is supposed to frighten off predatory animals lying in the grass. Finally with
[illegible] the war and dance ornamentation belong the long-haired black and white strips of skin (= *mingo*, = *mingoyo*) that the warriors tie around their ankles and that are made out of the skin of the white-tailed colobus (*Colobus caudatus*).

[illegible] is not considered correct. The smiths marry amongst themselves. [324] [324]

If a Masai takes in his hand a spear or sword or other thing which a smith has held, he first of all oils his hand for it is considered improper for him to take it in his bare hand. [876]

The smiths are not rich in cattle like other Masai. They have no luck with cattle. If you find one possessing forty head, it is a very large number. [333]

The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of them can speak this language: it is only a certain number of them who know it. [198]

Earthenware pots and gourds.

Some Masai women are able to make earthenware pots; others who are unable to make them buy them from savages. [323] [397]

Gourds are also bought, or they are collected in the deserted kraals. [215]

One pot can be purchased for a goat. [235]

When the Masai make pots they make them in two sizes, big and small; these pots are also provided with handles[1] by which they can be picked up.

When warriors go to the veldt to slaughter cattle, they carry their cooking-pots by a strip of hide fastened to the handles[2]. [393] [397]

[1] Lit. ears. [2] For illustrations see Hinde, The Last of the Masai, p. 84.

"The political and military organisation of the Masai has been so fully described by the various travellers, notably Mr. Thomson, who have made it their study, that it is unnecessary for me in this report to reproduce the information which, without with far greater knowledge than I can pretend to possess, have already supplied on this subject. There seems, so far, but little hope that the wild people will, as a whole, be weaned from their predatory mode of life, and induced to become peaceful cultivators. Though a few of them settled on Ngong Hills have recently begun to take to agriculture, under the supervision of the local chiefs.

"The total number of the Masai in the Kenia district, including the Wandorobbo, is estimated by Mr. Ainsworth at 18,000. There is one settlement on Ngong Hills, include 800 "Ilkiroro" or warriors, under Mr. [illegible] or "Laigwanan," and about 4,000 old men, women and children."

In another part of this report the Arthur Hastings writes as follows:—

"Mr. Gibbons, when in charge of Kikuyu, introduced the practice of employing Masai women to carry the roads, and they have proved, I believe, very satisfactory. Covering the 100 miles of the first stage in five days. The average total time taken to transport the roads from Mombasa to the Kikuyu Station, a distance of 400 miles, is twenty days, or about 20[illegible] miles a day. The weight of each load of roads is 30 lbs."

In a subsequent passage, dealing with the slave-trade, Mr. Arthur Hastings writes:—

"The trade in Ukamba is confined to the dancer of Giriri, ... and is chiefly in Masai women and children.

"Its origin is as follows:—When the Masai of Kenia Nyiri, near Kenia, were decimated about four years ago by an epidemic of small-pox, following upon a severe cattle plague, which obliged their warriors to go long distances to sell for cattle, and thus have their lands almost uninhabited, the Kikuyu people, their hereditary foes, fell upon them in overwhelming numbers, massacring their old men and carrying off their women and children as slaves. These they are now selling at low rates, having more of them than they want, to local Arab or Swahili middlemen, who, driven by our anti-slavery laws from the coast, can only carry on their trade with safety in inland districts as yet unoccupied by us, and who retail the slaves thus purchased at a profit to the native throughout remote Ukamba, these native people being all themselves free, and therefore requiring to be supplied with such slaves as they may need from other tribes.

"Some of the Masai girls are kept by their Swahili purchasers as concubines, and these, when they have borne to a year or two enough Swahili to pass in the Swahili from as road women, will go down with their mothers to the coast, where a few of them (not having borne children) may be secretly sold to other Arabs or Swahilis, but Mr. Ainsworth, Commissioner Ainsworth, who knows Ukamba well, assures me that they usually all remain in Giriri, and further whether any of them in a year could have it.

Referring again to the activities of Swahili, Mr. Arthur Hastings wrote:—

"Of late there have been symptoms of unrest among the Masai which have made it necessary to keep a careful watch on them. Sambera, Chief of the Loita division of the race, who speaks sometimes in English and sometimes in German, has been endeavouring to persuade his brother Lenana, the Chief of the Masai of Naivasha, all of them on our side of the border, to join him in a general movement against the Germans in Kilimanjaro, who recently shot a local tribe of Masai, the Wa-Arabe, for the murder of two German officers.

"In anticipation of trouble in this quarter, I sent reinforcements to Naivasha, and the simultaneous arrival of troops from Uganda at Naivasha and at Ngong Hills from Mombasa seems to have induced Lenana to decline Sambera's proposals, which, though personally directed against the Germans, really aimed at a general rising against all European control."

61 Thomson K-3 (1883-1884)1887
FL12 Masai FL12

955 was not even put through the lessons of the teb. Sometimes, however, his mother, in a fit of affection, and imbued
956 with the belief that some day he would make a name for himself as a member of shauri and a liker of cattle, would make up an unknown and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

957 And so life went on, and he was promoted to the rank of
958 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
959 leaving the bow quite free. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

960 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[961] occupation. He had by this time acquired some notions of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[962] these occasions carried their household gods, though his
[963] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and also down in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion.
964 He learned something of the mystery of the unknown by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngai (God, or the Invisible). He heard also that the place of Ngai was among the eternal snows of Kilimanjaro, or that the thunders of
[965] Deepe Ngai (an active volcanic mountain) were the voice.

It is very pleasing to think of Moses at this period reclining under a bush or standing watchfully over his flock
[966] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the whence, whence, and whither of life. We can imagine him appeal-

412 (231) goat or sheep. Other shapes consist of such a piece of a this tree trunk, which bears on its lower end a wreath of branches, or also of a wooden handle on whose lower end, in this placed cowries, (326) six two short cone-sticks. The blacksmiths make an and knife. 372 A little board (as [illegible]) /40/ of soft wood and a twirling stick (324) (of [illegible] of [illegible]) of hard wood (1)

1. Especially from the of [illegible] (Flora [illegible]) and of [illegible] (Fuchsia [illegible]).

serve as fire-lighter (Fig. 16). To make fire, one holds the little board firmly on the ground with both hands, while another kneels below it and, twirling on it with the stick, produces the necessary friction. After approximately half a minute, when the fine shavings (231) rubbed off the board smoke, one throws on some dried cattle-dung. As soon as this starts to glow, one puts brush on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves. 415 With the household equipment also belong the large leather pouches

372

415

415 (Fig. 18 [illegible] see Fig. 17) (of [illegible], of [illegible]), which in 412 former times were loaded only on donkeys, but now are also carried by the women on their backs, just like the leather bags (or [illegible], [illegible]), when they are out to buy vegetables.

/170 cont./

among the others usually more spade-shaped (2). The first two shapes, especially the spoon-shaped one, have in more recent times also been imitated by finger mobile, and, to be sure, as I /180/ was able to determine in several cases, on the supreme order of Meaat warriors. While the spear shaft is circular above and below as a rule, one also finds such, particularly in the Ol Doogga province, among which these parts have a rectangular diameter and one which notches (Fig. 90) are made as ceremonial marks of various meanings (3).

1. They may mean: dancer, of boys, tribe or lineage, etc., of the owner.

/Figs. 91-92 appear here./

On the march the spear is carried, either on the right or on the left, in three different ways, among which the warrior alternates according to convenience. 1. With unsecurled arm hanging down, the hand grasps the spear shaft at the spear's center of gravity. The spear lies horizontally, the tip /181/ directed forward and slightly outward. 2. The spear is carried in the arm, similar to the position of the "gun in the arm." With thumb, index finger, and middle finger the spear shaft is grasped in the middle, so one

[POST CONTINUED ON PAGE 173]

[illegible]

[illegible] grasp a pencil in writing. 3. The spear is carried on the shoulder upon which its center of gravity rests. The point is directed diagonally upwards; the hand exercise the spear does with the fist.

[illegible] The sword (Fig. 11) consists of the sword, wooden hilt, provided with transverse grooves, and the long, double-edged blade. The former, according to the movements of the blades, has not changed, whereas the blade had undergone a great transformation. Originally it was only 50 centimeters long and had its greatest width of barely two centimeters in the center. At that time the sword resembled a double-edged dagger (Fig. 10) and was suitable only for stabbing.

[illegible]

Fig. 10 a. (1/9) Fig. 10 b. (1/10)

[illegible] Gradually the blade became longer and, in order to be able to use it better for cutting, its center of gravity was put closer to the tip, so that the blade now 80 centimeters long has its greatest width of three centimeters only five centimeters away from the tip. When one said [illegible] the cross-section of the spear blade also applies to that of the sword blade. Its cross-section is slightly S-shaped (Fig. 10 f). It is made by lower ridge, straight if by longer ridge (Fig. 10 g). The

/110 cont./

were drawn from each end of the grip stick to the grip (Pl. 94). The present-day shields, like the former ones, are also made out of buffalo or giraffe skin. For better protection of the hand, the umbo is lined with a round patch of the same skin, and, on top of that, in order to prevent the chafing of the finger knuckles, with a piece of soft doeskin. The shields now in use, measured with the convexity, are 1-1.10 meters long and half as wide. The escutcheon is painted on the front surface of the shield, whereas the reverse side often -- not always -- bears the lounge coat of arms.

On the march the warrior carries the spear with one hand, the shield in the other one. With arm hanging down, the hand grasps the shield grip so that the smaller diameter of the shield is vertical and the painted surface is turned outward.

The club (ul glaulu ul glaul [Fig. 94]) is now made out of one piece, generally out of ordinary hard wood, especially from the tree ul ulaulu and ul ulaulbaak (1):

lion a cow, which he looks after and tends, it leaves, and by so doing enables him to live, for he can marry, and have children, and thus become rich.

Now cattle feed on grass, and the Masai love grass on this account.

Whenever there is a drought, the women folkes grass on to their clothes, and go and offer up prayers to God.

If a warrior lands a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign.

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them.

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle.

Again, if a man who is proceeding on a journey sees a tree which has

fallen on the road, he pulls up some grass, and throws it on the tree; otherwise he fears that his journey will not be successful.

The Masai love grass very much, for they say: "God gave us cattle and grass, we do not separate the things which God has given us."

Whenever Masai women milk their cows, they take some milk from the gourd and pour it away, for they say: "God likes this."

The brand-marks and ear-cutting of cattle, sheep, and donkeys.

The brand-marks which the Masai use for their cattle are as follow.

For each clan and family there is one principal mark, and all the cattle belonging to the various members of a family are branded in a special way.

There are also small marks by which the actual owner can be recognized.

Besides branding, each family has a special method of slitting the ears of their cattle, sheep, and donkeys.

They likewise have another mark for each individual owner.

If therefore a cow is seen, it can be recognized as belonging to the Ilmer clan, for instance, and also to such and such a person.

The process of moving.

The Masai are fond of moving, and if they happen to be staying in a place where the grazing is poor, they move to another spot.

When they move, they unlide their dwellings with skins and pack-saddles in which they put their goods, and the women carry bags.

Should they stay in a place where the grass is not good, they do not build proper huts, but they live in the so-called il-ugoboni, i.e. in huts made of skins. When they go to a good grazing ground, they build huts.

The women do the work of building. They prepare poles, and put one end in holes, which they dig in the ground; they then bind the poles together with cord made from bones; after which they cover the framework with long grass. When they have finished this, they plaster the whole of the outside with cow-dung and mud.

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia* sudica and throw wood on the fire. The women obtain their fire from the men which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus* sycomorus and *Rhamnus* sp.; the flat pieces of wood from any thorn tree, such as *Dichrostachys cinerea*, *Cordia* sudica, or *Acacia* albida.

[1] When the journey is a short one the women carry fire with them.

"The political and military organisation of the Dusun has been so fully described by the various travellers, notably Mr. Thomson, who have made a deep study, that it is unnecessary for me in this report to reproduce the information which, without his greater knowledge than I can pretend to possess, have already supplied on this subject. There seems no doubt but that the wild people will, as a whole, be amenable from their predatory ways of life, and inclined to become peaceful cultivators. Though a few of them settled on Sipanggi Besar have recently begun to take to agriculture, under the supervision of the local officials.

"The total number of the Dusun in the Kinta district, including the Kinabatangan, is estimated by Mr. Aiscough at 10,000. There is one settlement on Sipanggi Besar, include 200 "Dusunan" or mountain people, in communities of "Lingkungs", and about 4,000 all men, women and children."

In another part of this report Mr Arthur Hastings writes as follows:-

"Mr. Gibbons, when in charge of Kiluyan, introduced the practice of employing Dusun runners to carry the mails, and they have proved, I believe, very satisfactory, covering the 100 miles of the Dusun stage in five days. The average total time taken to transport the mails from Beaufort to the Kiluyan Fortress, a distance of 200 miles, is twenty days, or about 10½ miles a day. The weight of each load of mails is 30 lbs."

In a subsequent passage, dealing with the Dusun tribe, Mr Arthur Hastings writes:-

"The tribe in Ulumbu is confined to the Dusun of Kiau, and is chiefly to Dusun women and children.

"The origin is as follows:- When the Dusun of Kiau were Dusun, were dominated about four years ago by an epidemic of small pox. Following upon a severe cattle plague, which obliged their warriors to go long distances to and for cattle, and thus have their heads shaved architected, the Kiluyan people, their hereditary foes, fell upon them in overwhelming numbers, massacring their old men and carrying off their women and children as slaves. These they are now selling at low rates, having some of them their own, to local Malay or Pendik middlemen, who, drawn by our patrolmen from the coast, can only carry on their trade with safety in inland districts as yet unoccupied by us, and who resell the slaves thus purchased at a profit to the settlers throughout eastern Ulumbu, these native people being all Kiluyanites too, and therefore requiring to be supplied with such slaves as they can, well from other tribes.

"Some of the Dusun girls are kept by their Pendik purchasers as concubines, and these, when they have borne to a year or two enough Pendik to pass in the Pendik from go round women, will go down with their mothers to the coast where a lot of Dusun having been children can be secretly sold to other Malay or Pendik, but the Kiluyanites, Dusun-wife, who bears Chinaman will, assume are that this growth of women to Kiau, and thus whether they of Kiau. In a year even here 2."

Referring again to the activities of Residents, Mr Arthur Hastings wrote:-

"Of late there have been symptoms of unrest among the Dusun, which have made it necessary to keep a careful watch on them. Southern Chief of the Lotu division of the Kiau, who speaks sometimes in English and sometimes in Dusun language, has been endeavouring to persuade the further Dusun, the Chief of the Kiau of Tuhomba, all of them on one side of the border, to join him in a general uprising against the Germans in Kilimanjaro, who recently shooted a local tribe of Kiau, the Wa-Arabs, for the murder of two Dusun missionaries.

"In anticipation of trouble in this quarter, I sent reinforcements to Tuhomba, and the simultaneous arrival of troops from Uganda at Tuhomba and at Sipanggi Besar from Bukoba seems to have induced Lotuan to defer Southern's proposals, which, though primarily directed against the Germans, really aimed at a general rising against all Europeans overall."

Cattle per Gate.

Number of cattle.		Gates		Percentage.
Under 50	=	50	=	10.1%
50 = 100	=	40	=	17.0%
101 = 150	=	100	=	27.1%
151 = 200	=	111	=	22.4%
201 = 250	=	94	=	6.8%
251 = 300	=	11	=	2.1%
301 = 350	=	9	=	1.7%
351 = 400	=	0		
401 = 450	=	0		
451 = 500	=	1	=	1.5%
501 = 550	=	1		
Over 550	=	1		
		Total 494		

As 100,000 cattle were owned by these 494 gates it follows that the average number per gate is just over three hundred, but this figure is misleading, for two-thirds of the gates possess less than two hundred head.*

The advantages of marriage not only include the acquisition of a woman to bear one's children and to tend one's cattle. For marriage sets up a new relationship with one's wife's family, whereby each party is expected to help the other. If a father-in-law loses his cattle by drought or disease, the son-in-law is expected to contribute towards a new herd. If a son-in-law strikes hard times, the father-in-law — if only for the sake of his daughter — will transfer cattle to him.

At times, also, a daughter will, by mutually arrangement with the son-in-law, return to live with her father for considerable periods, being visited from time to time by her husband, or again a grandson will be sent from home to help herd his grandfather's cattle.

The fulfilment of these various obligations leads to much travelling and consequent contact, almost as much as the actual betrothal and marriage dues. This latter is a lengthy process. Early betrothal is the rule and involves a long engagement, during which the man is expected to maintain contact with his future in-laws. Frequent travelling is also necessary in other connections, for example a man goes himself or sends a son to examine the water and pasture of the area to which he proposes to move, and as we have seen the menfolk are always on the move, visiting friends, begging bullocks for medicinals, etc. Or in spite of the size of the area which they inhabit, and of their scattered settlements, the Shani maintain very close contact amongst themselves.

Another point of considerable importance to Shani family affairs is the adoption of children, frequently practised both in regard of Shani

* The most number of cattle per gate lies between 100 and 150 or between 50 and 50 head per which male taxpayer—Ed.

These candidates who are eligible to take part in the ceremony assemble on the day fixed for the proceedings. They come from all parts of the Kikuyu country, north, south, east, and west, so there is only one ox-mining ceremony in the whole of Kikuyu country before a new age-group proceeds to initiation and circumcision. They wear ordinary everyday dress and carry sticks. The ox is brought into the village by the elders in charge of the ceremony, and the boys are lined up some distance away. A signal is given, and immediately the boys race to the ox, each boy endeavouring to get a firm grip of the ox's horns or of the hump. As soon as two boys have succeeded in gripping their parts firmly, all those boys of the same clan present line with their sticks, while all the elders rather race to force the boys to release their grip. Should they do so and should boys of another clan succeed in taking their place, they in their turn are attacked by the other clans and defended by their own. After a time the elders stop the contest, and those who succeeded in keeping their grip are greatly lauded. The two boys who actually held the horns and hump respectively will be renowned for their success for the rest of their lives. It is a recognized thing that during the contest very many individuals receive more or less serious wounds.

As soon as the contest has been stopped, the ox is slaughtered and eaten by all present at the ceremony, and the hide is cut up into small strips, in each of which a hole is cut, and a strip put on a ring on the middle finger of the right hand of each of the boys who participated in the contest. If any skin remains over after each boy has been thus decorated, it is cut into a long thin thong, which is given to a boy candidate of the Lukomei sub-clan (i.e. the sub-clan who provided the ox). This boy is called *ukabaari ngatong*. This thong must never be lost or parted with, but the small strips of skin placed on the boys' fingers must be removed a day or two later and thrown down in that part of the boy's mother's house where the calves sleep.

When this ceremony is over the boys go to their own homes to guard their ears for circumcision.

Circumcision.—The candidates are not circumcised in groups at local centres, but individually at their own homes, and as the number of operators is limited, candidates may have to wait for anything up to two years before their turn comes. The operators travel from district to district, visiting all the villages where there are candidates, and circumcising them at their own homes. During the interval between the end of the ox-mining ceremony (before which none of the candidates may be circumcised) and the time when his turn to be circumcised arrives, each boy goes back to his mother's home and carries on with the normal routine life of an uninitiated boy.

The operators who circumcise the boys are never true Kikuyu, but invariably "Wandorobo" living in Kikuyu country, but an explanation of this would be obviously except that it had always been so from the beginning.

[186] is of animals. It is apparently this fact which explains why there are so few cases of unchaperoned girls committing despite the Masyoria sexual organization. My informants insist that cases of conception only occur when a girl has been persuaded by a man to have full intercourse just after her menstruation. It is quite easy for a girl to see to it that she does not have full intercourse if she does not want it, since there are always at least two other couples sleeping on the same bed, and there is also always a married woman in the same hut to see to it that no force is used by the men.

(*For details of procedure should an unmarried girl conceive, see Girlhood.*)

[186] *Permanent Lovers.*—Besides the casual day-to-day lovers described above, a girl may also have a more permanent lover in the *mangata* in which she lives, chosen from among the ranks of those who have been her casual lovers. The actual choosing ceremony takes place in public, but the choice is usually made privately beforehand. This permanent lover in some cases will eventually be the girl's husband, but this is not usual, as nearly every Mawei girl is betrothed during childhood (see Marriage), and usually girls are quite content to marry those to whom they were thus betrothed. Should a girl be unwilling to marry the man to whom she is betrothed she usually continues to become pregnant by her "permanent lover" and so persuade him to marry her (see Girlhood).

[186] The actual ceremony of selecting a "permanent lover" takes place as a public affair. A group of the women, including the men, collect together and one of the men's friends then summons the girl and hands her a spear, and she is told to go and give it to the man she chooses as "permanent lover." Having thus been publicly accepted, the warrior from then on becomes responsible for supplying the girl with such ornaments and necklaces as she may need from time to time, and he also gives her a special necklace to be worn as a token. After this ceremony she continues as before to sleep with any of the warriors who may ask her to do so in the way detailed above (see Sex Life). Equally the men may sleep with any of the other girls, but the girl and her "permanent lover" can arrange to sleep together without adopting the usual formals and procedure.

[186] *The Ensoto Ceremony.*—After nine years of Junior Warriorhood a big ceremony called *Ensoto* takes place, at which all the members of a given group from the whole of the Mawei country, north, south, east, and west, are required to be present. This ceremony marks their rise from Junior to Senior Warriorhood. During the whole of the nine years of Junior Warriorhood they have not been allowed to shave their heads at all, but their hair has been gradually tied and twisted into a long pigtail at the back of the head, which is the sign of Junior Warriorhood. (The only exception to this rule of not shaving the head during Junior Warriorhood is in case of severe illness, when the head may be shaved if so desired.)

(ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 25 head of cattle, and twice as many sheep and goats, per head of the population.

The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and barks are used to make infusions which are used either with boiled meat or with milk. The men, while in the "moran," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some bananas, beans, millet, arrowroot, maize, sugar and honey, as these are available. The use of maize, which was introduced only a few years ago, is increasing.

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "moran" may be compelled to supplement their meat and milk diet.

Berries are eaten by the warriors when on safari, *i.e.*, on hunting or fighting expeditions. It appears also to be customary to send the pregnant women into the bush to eat berries. The berries would make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antiscorbutic addition.

One section of the tribe, the Loitokitok, have adopted a frankly mixed diet. It is of interest that pica among the Masai is confined to this section, who use edible earths from various sources with their vegetable foods.

(3) Chemical Composition of Native Foodstuffs, Edible Earths, and Mineral Waters.

The results of the chemical analysis of 153 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1930). All the figures are given as grams per 100 grams dry matter.

To bring it, two senior mamas of good character are chosen, and they go off dressed in women's clothing and ornaments, carrying bamboo spears and cattle-branding tools as a sign that they are on a peaceful errand. Nearing the diamonite they walk the diamonite as if it were gauze. Then they give the

/[illegible] cont./

After a battle of the kimet among themselves, the conclusion of peace is that the spokesm, in the presence of a number of warriors of both parties, exchange their skin capes and medal things. This is called makwhiage ungkia — exchange of skin capes.

The length of the stretches covered on war expeditions, in comparison to that of their neighbors carrying on agriculture, is often astonishing. Performances of 50 to 60 kilometers a day, three or four days in succession, are by no means exceptions. If one considers, however, that the training of warriors consists only of marching, that, aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry troop. The tales of the caravan people relate extraordinary things about the speed and endurance of the kimet warriors, and even European travelers have contributed to the spread of this legend in that they compare the physical performances of the kimet with those of the Europeans in the tropics. The unreasonableness of such a comparison is obvious. One also often hears how the kimet are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a good bottle of water on their long migrations. The kimet, however, knows perfectly every little spot of the steppes, he knows every rocky basin, every tiny spring, he also knows where an apparently dry brook bed carries subterranean water. Where water has collected in old hollow trees, and especially in buckets, this is accessible to him through a series of reeds made out of four-long tops bound in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited by their water content to quench thirst. They serve him, /124/ just as the wild honey, not infrequent in the steppes, also serves as food on the march. A cuckoo bird, the honey indicator (Cuculus indicator, called ol jokoni by the kimet), leads the kimet to the concealed honey holes. As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it in order to take out the honey. If the amount found is still not sufficient for the warriors, they buy the chewed comb, whereupon the bird, after

(b) Roads.

There are four main roads in the Naui Reserve. These are from Kijabe to Gilgil, 35 by way of Longi and Naro River, from Longi to Naro, from Ngong to Kedong and from Naivasha to Longisi by way of Kijabe.

Naro River—Gilgil. That part of the Kijabe-Gilgil road crossing from Naro Bridge to Gilgil 35 was made by the Soldiers' Settlers' Commissioner at Naro River Camp in 1913-1914, from funds set apart for that purpose out of the proceeds of a collective fine imposed on the Kiambu Side of the Fisher Road. (Cf. Chapter VII, Section 14.) The Naui expressed their approval of the work done and provided a number of labourers as well for the Administration.

A road from Kijabe to Naro was commenced in September, 1913, and was open to traffic between Kijabe and Naivasha in January, 1915. The rest of work was met from the proceeds of the 5 Months Fisher Road fine. (Cf. Chapter VII, Section 14), while the work was undertaken by the Administration. In 1917, work was continued on the road west of Naivasha and bridges were constructed over the Ndi River, Ragati Ngatia, Fort Lakonyi, Naivasha and Kabidabida Rivers. By March, 1917, the road was suitable for motor traffic from Kijabe to Naro.

Later in the year, an attempt was made to construct a new road from the foot of Kijabe Hill, by passing to the north of Longonot spur, but the alignment was found to be impracticable and the work was abandoned. In September and October, a new road was made, passing to the south of Longonot spur. This alignment proved satisfactory and the road is extensively used by wagon and motor transport. The Naui Purpose Account has been debited with the cost of the upkeep.

A branch of this road runs from Naivasha to Thomson and is fit for motor traffic.

Longi—Naro. A new road, from the Longi Valley to the bridge over the Naro River on the Naivasha border, was commenced in January, 1917, and a cribs bridge on the crib pattern was erected on the Ragati Ngatia, near Naro and a half mile from the Naivasha border. Funds for this work were found from the proceeds of the 5 Months fine.

Naro—Kedong. In 1918, £600 from the Naui Purpose Account was set aside for the purpose of constructing a road from Ngong to the Kedong Valley to join up with the Kijabe-Naro Road.

Naivasha—Longisi. The road from Naivasha to Longisi, by way of Kijabe, was constructed by the military authorities in 1915-1916. Having served its purpose, that part of the road lying between Kijabe and Longisi has largely fallen into disuse, but the road from Naivasha to Kijabe is still in fair order.

(c) Bridges.

Naro River. A bridge was built over the Naro River, about six miles below the Government Station, in 1913-1914.

In 1916, a cribs bridge was erected across the river over the station by the Soldiers' Commissioner. This bridge cost rather more than £100 and has a span of 100 feet. The Naui contributed the whole of the cost.

Uaso Nyiro. A bridge was constructed over the Uaso Nyiro River, near Mr. Aggett's farm, in 1913-1914.

Mr. Henry Ballard, on his tour in the Naui Reserve, considered it essential that a bridge should be erected over the river in the neighbourhood of Van de Weyer's Drift. The construction of such a bridge was approved by the Secretary of State in December, 1918, but Mr. Ballard suggested that work should be deferred until a final decision should have been arrived at, as to the best alignment for the Kijabe-Naro road. The Governor agreed to this, and no work has as yet been undertaken on it.

(255) was not even put through the horns of the kid. Sometimes, however, his mother, in a fit of affection, and infatuated with the belief that some day he would make a name for himself as a member of chiefs and a killer of cattle, would make up an unknown and wholesome compositions of grass and clay, and anoint his shoulders till he shone forth with a splendour due to the Maasai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

(256) And so life went on, and he was promoted to the rank of a boy proper. He was provided with a real bow and arrow. A square piece of sheepskin was tied over the left shoulder, leaving the bow quite free. He now began to cultivate, not a moustache, but his ear-holes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could easily put his fist through the distended portion. This is done by first putting a slender stick through the hole, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

(257) Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on these occasions carried their household goods, though his mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and vice versa in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion. (258) He learned something of the mystery of the universe by hearing his elders continually hold out prayers by the hour together in some unknown Being called Ngai (God, or the heavens). He heard also that the place of Ngai was among the eternal snows of Kilimanjaro, or that the thunders of (259) Donyo Ngai (an active volcanic mountain) were His voice.

It is very pleasing to think of Mona at this period reclining under a bush or standing watchfully over his flock with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the whence, whence, and whither of life. We can imagine him appeal-

[illegible] of cattle to a family (kidwan) in 1948 was between 100 and 200 head. There appears to be no such system as the Hamit Ingisi or Kipsiria dimension. (See Huntington, p. 21.) Milking is done by girls and women into gourds; the milk is allowed to sour, and it is then the skin, sometimes stuffed with grass and called a [illegible], is presented to the son of each soldiery. The milk yield is about three pints a day. Cattle are bled in the same way as by the Hamit, with a blunted arrow, alongside and into the jugular vein, and the blood is caught in a gourd. Many also are bled. Cattle are branded with marks on the rump or flank which indicate the owner's clan or subclan, with sometimes a private mark as well; the ears are also clipped for the same purpose. Salt for cattle is obtained by driving the herds to a salt-lick, [illegible]. The Masai are said to have effective remedies for diseases of cattle, but their efficacy has never been enough to prevent heavy loss during epidemics of rinderpest and pleuro-pneumonia.

Donkeys

[illegible] The Masai keep large numbers of donkeys (*[illegible]*, sing. *e-ldimi*) which are used for carrying their goods when they move homes (*olari*). Donkeys are marked by slitting the ears in different ways.

The Status of Cattle

[illegible] The status of cattle as regards ownership is uncertain. Merker says that women may own cattle; Thomson says they may not, and on such a point the statements of a traveller are open to question. Fadiman says that they may.* But further investigation of cattle as property, and of their status in the light of ritual value is required.

Inheritance of Cattle

[illegible] There does not seem to be any clear account of the rules which control the division of a man's stock among his sons. The guiding principle is that the oldest son of the senior wife gets the largest share, inherited not only the cattle given to him by his mother, but also those which his father had kept for his own use. Inheritance is affected also by the "gate" (*kidwan*) arrangement in the kraal; the cattle may not pass from one side to the other. If a wife on the left side dies without sons, her cattle may not go to a man on the right side so long as there are any sons by other wives on the left side. This subject also needs further investigation.

Grazing and Water Rights

[illegible] Land is not owned by individuals, but by the sub-tribe (*el-ukai*), and grazing rights are acquired by residence. Water rights are controlled by the clan. In the old days, when the Masai occupied new territory, each section, according to tradition, claimed a well, spring, or water-hole on behalf of his clan. Individual rights over water are then ruled out by tradition, and the senior member of a clan living at the water decides, after consultation with other clansmen, the order in which people take their cattle to water. But a Masai when actually on the move with cattle may claim, and must be given, priority over local cattle at any well or spring. Where water is plentiful, however, as in a river, possession is unnecessary.

Dowry or Loans

[illegible] In a purely pastoral society like that of the Masai the expression "economic unit" has little meaning, but so far as it can be said to exist, it is the family. It must be remembered, however, that the normal practice is for families to be divided between the father's kraal, *enkang*, and the warriors' kraal, *e-manyata*, and that the

000 Closer family relationships. -- Kinship designations. -- Terms of address for relatives.

602 Since every tribe and every lineage are descended from a
[613] tribal ancestor, the tribal and lineage members consider themselves
[614] more or less distant relatives. The family, one's own as well as, ascending, those of the father and of the mother, forms the closer
[611] relationship. The child follows the father's family (father right).
[672] Relatives are not responsible for punishable offenses, fines, or debts of a relative. Legally they need not support them either in connection with impoverishment or release from captivity; it is such a general custom, however, that probably no one ever evades it.

601 /41/ The Masai language is poor in particular kinship designations; most of them are made up of words for father, mother, brother, sister, son, daughter, etc.

Father: baba.

Mother: jējo.

Another wife of the father: eng afhji e jējo.

Principal wife: e' ṅgorojoni kitok, that is, the great woman, or en altero eng an, that is, the first in the kraal.

Every other wife: e' ṅgorojoni.

Brother (1):

1. Brother and sister come from the same wife, half brother and half sister from different wives of the same father.

/163 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the smashing of the spermatic cords with the club between the wood and string of a bow (a-idon). The testicles are not removed, but are left to atrophy. In the same /164/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always not until they are fully grown. Bulls and bucks with unnatural sexual [825] [777] instincts are slaughtered as soon as the vice is noticed, since they are regarded as bringing bad luck. It is believed that, as a result of [784] their behavior, they bring the punishmem of God upon the herd in [731] the form of an epidemic.

231 The donkeys are small, square-built, strong, and steadfast. With nicely arched cruppers, a rounded neck, firm and fleshy shanks, they are very similar in shape to the zebra. Their coloring is a uniform light gray with a black cross over the back and shoulders. [492] They serve only to carry burdens, whereas oxen are only rarely used.

Ill. 54. Masai goats and sheep.

233

C. G. Schillings phot.

Ill. 57. Masai sheep.

231 [492] [177] /167/ Where the Masai are neighbors of the Somali (in British East Africa), the camel has also found entry among them as a beast of burden. They do not, however, generally share the passion of their neighbors, for whose palate the meat of these animals is a special delicacy. The Masai do not keep chickens, ducks, pigeons, etc. The attachment of the Masai to their cattle, especially to the 233 552 cows, makes them seem to them like companions and friends. Thus, their habit of giving their animals names, especially considering the extravagance that the people indulge in with proper names, does not seem at all surprising. The /Ill. 58 appears here/ name Sudjaro means that the cow has come from a distance. Rimogeno was captured in the vicinity . Nondoje is a cow given as bride price. Sotoa is one such that was received as a gift from an uncle or aunt. A cow paid as fine is called Njamu. Each of the five cows that the

361 /177 cont./
233 animals that go forward only with difficulty are carried in the arms.
[561] Boys take care of the livestock driving, under the supervision of
[701] married men. With each party is found a stronger guard of warriors.
[492] Meanwhile the women are still busy with the loading of the donkeys, on which all the household equipment is packed. More rarely a few oxen or cows must help out. After this work is finished, the herd of donkeys follows the tracks of the livestock. Behind them come the women, girls, and children; almost every one of them also drags along some household object or at least a small-livestock or meat
[701] skin. Oddly enough, a guard of warriors is not found with this party, as there was with all the preceding ones, but rather at most a few old men armed with spears or bows and arrows. Usually the destination is reached on the same day. If this is not the case, however, camp is pitched during the night within a hastily constructed barricade of thorny branches. The next morning the march then continues
361 before daybreak. After arrival at the new site the women immedi-
462 ately start laying out the kraal. First the thorn barricade is laid out, and in the following days the huts are built. Erecting the kraal proceeds very rapidly; as a rule it is finished in a week as the latest. The old kraal was not destroyed upon being vacated. It is left standing and reoccupied later, after the pasture has recovered. Meanwhile, of course, much has deteriorated, so that the work of reconstruction almost equals that of a new installation. In the last
[136] few years, since the sand flea (Pulex penetrans) has become a pest in East Africa, the reoccupation of old kraals is declining more and more. In order to destroy the noxious insects inhabiting them, they are burned when vacated.

000 It is obvious that the European who wants to engage in stock-breeding here cannot move about with his herd in the manner of the Masai. Moreover, a division of the herd in such a way that sufficient grass is present throughout the year within range of the kraal for the individual parts does not seem feasible, and, to be sure, especially because of the difficulty of personal supervision and observation of the sicknesses arising, as well as of isolation in case of an epidemic. An improvement of the pasture by means of

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some- 415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned • 492 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on 443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL18
Kisonko

are in for a bad time." That is sufficient to ensure that a deputation from Moibo will visit him without delay. 791 789

Apart from specific payments for age grade matters, and the ceremonies obtained thereby, all the elders of an area are supposed to benefit from the performance of these local ceremonies, and consequently are expected to pay. It is an accepted practice that the Dalala age should not give cattle to be taken to the laibon, but are expected to provide hospitality for the meeting which is called to decide who shall contribute. At the meeting proceedings may begin by a man being denounced for refusing hospitality to an age-mate, and so in effect fined. Otherwise the matter is one for general discussion, X pointing out that he gave a beast last time, Y drawing attention to the fact that Z has not helped for many years, and so on. 791

These details have been included under the heading "Modern Adaptations," since one is so frequently assured that in the old days no such levies were made. It is asserted that the only occasions on which boma to boma levies were made was when a party of moran returned from a raid empty-handed, and were so ashamed that they collected beasts from amongst themselves to take to the laibon.

Another demand which a laibon makes on his followers is that he should be provided with wives. Some elders say that this is an age-old institution, others that it is a recent innovation. Be this as it may, motor transport is an innovation, and by getting round the country more, the laibon sees a greater number of suitable women, and consequently increases his demands. Parrit (15) is credited with collecting five girls as a result of the safari he went round South Masailand when the boundary was demarcated: the Dwati paid the dowry and arranged the weddings. Mbeiya (17), on a safari to Kibaya in 1937, demanded and was given the daughter of Lemauna, although she was engaged to another; Kapurwa (23) paid one beast towards the dowry and contributed the ram-skins for the wedding garment. When the girl was brought to Mondul, a number of milch cows were presented to form the nucleus of her herd. On the same trip, Mbeiya demanded and was given one girl from Simanjiro and another from Losogonoi. Taiko (18) is also alleged to have tried his hand at the same game, demanding the daughter of an old man at Sanya; the father asserted that it was just an ordinary marriage, but local Masai opinion thought otherwise. For when a girl is married to a laibon, she is regarded as lost to her family and clan. The usual relationship which marriage sets up between in-laws does not exist; one cannot approach a laibon for assistance as one can an ordinary son-in-law, nor can one expect a laibon to let either one's daughter or her children go home on protracted visits. 791 595 [177] [588] [614]

The introduction of Pax Britannica and of motor transport makes contact between the Masai medicine men and alien witch doctors much more possible. There always seems to have been a close association between the Kikuyu and the Engidong clan, so much so that we may reasonably suspect that the heaven-sent child ol-le-Mweiya was merely a Kikuyu impostor. But if, as one gathers, the Masai and Kikuyu were 791 177 494

FL12 Masai FL12

INTRODUCTION

THE present work, by Mr. Hollis, Chief Secretary to the Administration of the East Africa Protectorate, treats of the language, traditions, and customs of the Masai, one of the most interesting and important tribes of those territories. I am not competent—and there must be few people in the world who are—to criticize by the light of independent knowledge the mass of material which he has brought together, and will merely attempt briefly to summarize the information about the race which we now possess. Mr. Hollis's previous contributions to anthropology, his opportunities for studying and daily conversing with the Masai, and his linguistic talents, which are well known to every one in East Africa, are a sufficient guarantee for the thoroughness and excellence of his work. 114

The Masai at present inhabit the inland districts of British and German East Africa from the equator to about 6° S. Few of them are found north of the Line, except an isolated settlement just south of Lake Rudolf, and they seem to avoid both the sea and the great central lakes. Many smaller pieces of water, such as Lakes Naivasha and Nakuru, are found in their haunts, but they neither use boats nor catch fish. They are divided at present into two sections, one of which, called 'L-Oikop, is agricultural and settled, while the other, or Masai proper, is entirely pastoral and nomadic. The difference between the two is evidently not ancient, for both speak practically the same language, and it is probable that the agriculturalists of the present time are nomads who have settled down. On the other hand, tradition does not carry the history of the tribe further back than a century at the most[1], and it would be rash to assume that the nomad pastoral state is primitive or very ancient. It is quite probable that there was a large agricultural settlement on the Uasin-Gishu plateau from which the more adventurous warriors detached themselves. 101 13 [501] [226] 101 [197] 173 174

In East Africa the Masai are clearly distinguished by their language, customs, and appearance from the Bantu races (although the latter often imitate them, and have received a certain proportion of Masai blood), and equally clearly 101 144

[1] The genealogy of the medicine men goes back about 200 years.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12
Agricultural Masai

In 1932 the Il-Tiamus numbered about 2,250 (3,423 according to the 1948 Census), and though they are of Masai stock, being descended from a Sambur section called Il-Doigio, they have admitted a variety of refugees including Kamasya, and become rather mixed. According to von Höhnel they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokua Island in Lake Baringo. They are expert swimmers and possess canoes, though von Höhnel saw none in 1887. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Njemps Kubwa" and "Njemps Nikogo" in the Tigrish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled granaries are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and *emuoto* and other ceremonies, and practise the "free-love" system of the pastoralists, though without the *manyatas*. Today they have some 180,000 acres of poor land, most of it unfit for cultivation; but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oikop to become cattle people again. In the time of Thomson and Teleki, however, Njemps was an important station on the caravan route, and von Höhnel noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were intersected by irrigation channels bringing water from dams across the river Tigrish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[13] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of Suk and Turkana types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oikop.[14] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects; but it seems now to have resulted in considerable physical degeneration, and in the appearance of rickets in all members of the group. There seems to be a good deal of Gelaba blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Bantu stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Baraguyu in Southern Masailand are also to be classed as agricultural Masai.[14]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *ol-ayioni*. At circumcision[15] he enters an age-set and becomes a warrior, *ol-murani*, "one who is circumcised," and may associate with unmarried girls. At the *ol-gesher* ceremony he becomes an elder, *ol-morua*. Warriors may marry when they become senior warriors. After the *ol-gesher* the newly made elders attend to their family concerns, and get wives

[13] K. R. Dundas, *JRAI*, XL, pp. 49–53.

[14] W. S. Dyson and V. E. Fuchs, "The Elmolo," *JRAI*, 1937, LXVII, p. 327; von Höhnel, II, pp. 138–40.

[14] The people known as WaMeru in northern Tanganyika are not Masai, but people of Bantu stock who have imitated them.

[15] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 13–17 years; Fosbrooke gives the lower limit as 16 or 17.

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eng an el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
• 512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandorobo, who presumably learned the potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[758] healthy people uncooked, as fresh (en gule) or sour (en gule naoto); boiled milk is food for the sick and as such is usually mixed with pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted
[758] state. Milk mixed with fresh or /33/ cooked blood (en liwot) is greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[453] (1),
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

At one o'clock in the afternoon, the noon meal is eaten, after the men who have looked after the cattle in the pasture have returned. After the meal one takes a nap, plays a little game, or picks up some manual work (making articles of clothing or adornment, clubs, gourd bottles, etc.). The principal game

Fig. 8. Spa.

of the Masai is the board game (en dodoi, en dodo) (Fig. 8). Two rows of six to ten depressions or compartments running side by side in a longitudinal direction are carved into a thick board about two feet long. The rules of the game are as follows: the board stands between two players; to each of them belongs the row facing him (ol mátua, el mátuan). Now each one places in each compartment (en qurtóo, 'n qurtóo) of his row four stones (os sólid, es sólido) (2).

2. One uses for this round river-pebbles or the fruits of the ol gilangulu (Caesalpinia Bonducella Roxb.).

The player who starts takes the four stones out of one of the compartments of his row and puts one of them into each of the next compartments to the right. From the compartment in which he placed his last stone and in which there are now five, he removes these and, as before, places them in the next compartments, whereby he passes from his own row to that of the opponent. He proceeds in this manner until the last of the stones taken from a compartment happens to fall into an empty compartment.

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters are small, finger-thick, and spindle-shaped ivory sticks 15-20 centimeters long (ol alai, el ala) (1).

[302] [237]

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gehé ('n gehén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

512 Soon afterwards the livestock returns home, and, after it is milked,
701 the people take the evening meal (en dai e téiba = food in the even-
[234] ing), again consisting of milk. After that the dancing of warriors
[264] and girls begins anew on a small open place in the kraal, close to
[272] the entrance, and is interrupted only from time to time in order to
[535] moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234

1. [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

[Warrior Kraal]

/90 cont./

512 [234] before the milking is finished, then the calves are allowed to go to the cows for about an hour, and finally /91/ the former must again be separated and shut up, so that there will be enough milk in the morning. At ten o'clock it becomes quiet, the people retire into the huts, except for the boys who lie down to sleep on the ground beside the goats.

136 The silence lying over the vast steppe is broken only now and then by the howl of the spotted hyena (Hyaena crocuta), reminiscent of the whistle of a siren, more rarely by the hoarse laughter of the striped hyena (Hyaena striata and Hyaena Schillingsi). Sometimes 825 the roar and growl of a lion can also be heard, and if the latter slinks about silently sometime, one becomes aware of its approach

535 701

825 by the behavior of the cattle: they snort, stamp, and crowd together, or race wildly through the kraal. Then a number of women immediately hasten out of the huts, in order to drive away the beast 000 of prey by shrill, trilling cries (ol gijoi). A few intrepid warriors also

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Before dealing with the subsequent procedure, after a girl has promised to visit a warrior on a given night, it is necessary to outline the sleeping arrangements and accommodation in a *manyatta* hut. The hut is not divided off into rooms in any way, and at one end of the hut is the bed upon which the woman (mother of one of the warriors) to whom the hut belongs, sleeps with her younger children. At the other end of the hut, not screened off in any way, is the bed upon which the warriors and girls sleep. No warrior may ever sleep upon the married woman's bed, but the woman's husband can come down and visit her whenever he likes, and when he does so, no warriors or girls may sleep in the hut. Ordinarily, however, the woman's husband does not live at the *manyatta*, and she and her small children sleep on her bed at the one end of the hut, while the warriors sleep on the bed at the other end of the hut with the girls. No warrior ever sleeps in his own mother's hut, but always in one of the other huts if he has invited a girl to sleep the night with him. When, therefore, he has arranged for a girl to visit him at night he goes in the evening to one of the other huts and arranges to sleep on the young people's bed there. He then sends a message by the woman who owns the hut to tell the girl that he is sleeping there so that she may come to him. There is absolutely no objection to several men coming in this way to the same hut, and sleeping on the same big bed each accompanied by his girl. In fact, it is considered wrong for a warrior and a girl to have sexual intercourse unless there are also other couples sleeping on the same bed. Moreover, besides those men who have come to the hut and sent for their girls to join them there, there are usually several younger girls, daughters of the woman who owns the hut, sleeping on the bed too. These young girls, too young as yet to sleep with the men sexually, nevertheless, sleep on the same bed as the warriors and older girls, and thus grow up steeped in the customs of the *manyatta*.

836 561 513 [342] [352] [833]

It is exceptionally difficult for a European to understand all the full details and facts concerning native sex life, but the following facts have been noted and verified for the Masai. No girl may sleep with a man except she be absolutely nude, but on the other hand, although by tradition and by etiquette she may not refuse an invitation to sleep with a man (except for the two reasons already given above), she is not necessarily expected to allow him full sexual intercourse, and, in fact, often does not do so. Thus—strange as it may seem—Masai girls do sometimes go to their husbands as virgins in the physical sense of the word (*see* Marriage), although they may have slept with men in the *manyattas* countless times. Usually, however, Masai girls have no objection to full intercourse except during the first four or five days after each menstrual period (*see* Girlhood), for the Masai firmly believe that conception cannot occur unless intercourse takes place very soon after menstruation, and four to five days is considered an absolutely safe margin. Moreover, this belief seems to have a strong foundation in fact, and it thus raises a very interesting point for physiologists as to whether this is as true of primitive peoples as it

836 833 561 [576] [585] 836 842 561

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eṅg aṅ el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
• 513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organization: the speaker, his badge and tasks; leaders; benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- War: permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

621 701 [361] [634] In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ol manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a [342] [513] large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are [423] staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

621 701 462 [351] [356] The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

/157 cont./

805 Afternoon is designated in general with etuschugoti oibi, that is, the shadow is reversed; or tēlba. One also often hears this designation for the time from three to five o'clock in the afternoon. In particular the time from twelve to two is called ete gil eṅg oloṅ = the sun is broken; the time from two to four erta tēlba = now afternoon; that from four to six, emutó = evening. Five o'clock in the afternoon is designated with erta doije eṅg oloṅ = the sun is going down. The time during which the evening glow is still to be seen is called etimirua eṅg oloṅ = the twilight follows the sun.

[513] With darkness setting in, the tárá begins and lasts until about eight o'clock, when one usually goes to rest.

Night is called eṅ gawarié; midnight, em bolos eṅ gawarié.

Today is called tāda or tāta, tomorrow taisēre or taisēri, yesterday ṅgolé; the day before yesterday, as well as the day after tomorrow, is called eṅ aioloṅ. The days reckoned beyond the day before yesterday in the past and beyond the day after tomorrow in the future are designated as eṅg aioloṅ edia matua, eṅg aioloṅ e ungwan, etc. The latter is the fifth day from today reckoned both [193] in the future and in the past. The tense of the verb shows which of the two is meant.

With the help of these designations the days of the seven-day week (eṅ giruaha or eṅ giruascha, pl. eṅ giruaschat) are named. The names are the following:

First day = tāda (today).

Second day = taisēre (tomorrow).

Third day = eṅg aioloṅ.

Fourth day = eṅg ailoṅ edia matua (more rarely eṅg aioloṅ e uni).

Fifth day = eṅg ailoṅ e uṅgwan.

/158/ Sixth day = eṅg aioloṅ e miēt.

Seventh day = guna l'oṅ Ile or essubat 'n oloṅ = the good day (1).

1. In this connection it should be noted that ósubat, fem. éssubat, means "good," "excellent," and uni, ungwan, miēt, Ile are the verbs for three, four, five, and six. H.

595 and so on. The wife is given a specified number of cattle to keep in trust for her son, and she and the children also tend young animals in the herds.

342 These huts are about five feet high and of varying dimensions, but usually roughly square and 10 to 20 feet across. The door is very low. Just inside the door there is normally a baffle wall of loosely woven twigs. Beyond that there are often two or three rooms, each divided from the others by a low open wall of [231] twigs. Young livestock are brought into one of the [513] rooms and the others serve for sleeping and cooking. [352] Usually the beds are platforms of twigs and grass covered [354] by hides. The cooking fire is in a far corner and is very small, normally with three stones around it to support pots. There is no smoke hole in the roof. The outer walls and roof are an open mesh of wattle often interwoven with coarse grass and shrubs. Support comes from larger branches and small logs up to about six inches in diameter. The exterior and walls and roof, and the insides of the door opening are plastered with [184] a mixture of mud, cattle dung, and short grasses. Hut [462] design varies slightly from area to area. Constructing the huts is women's work. Men occasionally help in collecting larger trees and bushes.

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some- 415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned 492 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on 443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 201

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [153]

[1] Amongst the Dinkas it is also customary for the medicine-men to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

[2] The name by which the Swahili were formerly known.

1: Hollis G-5 (ca. 1894-1904) 1905

When the Europeans came to these countries and the Masai saw them for the first time, they used to spit, for they said: 'We have never seen people like these.' They also called them medicine-men, and if a European gave a Masai medicine, the latter asked him to spit on him to heal him. Europeans were formerly called 'L-Ojuju owing to their being hairy.

[1] *Vide* p. 287.

[171] [113] [2] It is customary amongst the Bari people for old men (fathers or grandfathers) to take children's heads between their knees and spit slightly on them to bless them (Mitterrutzner, *Die Sprache der Bari*, p. xvi).

[3] *Vide* p. 284.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

When the time for the ceremony arrives, a very big village is built called *sunubu*, and all the members of that age-grade which is to be transferred from the Junior to the Senior Warriorhood stage assemble here with their friends and relations. The warriors concerned all dress up in their very best finery, and lion skins especially are in great demand; and for nine days they dance a special dance called *Kaibach el moran*. During the whole nine days of dancing a very great number of cattle are slaughtered, and there is great feasting and beer-drinking, but neither the dancing nor the feasting are the important part of the ceremony; they are merely incidentals, centred around the *thingira*. 561 [535] [574]

The Thingira.—Away from the main village an enormous hut has been built which will accommodate anything up to four hundred men at a time. It is said to be round in plan, to have a pointed roof, and to take very many days to build. There are no partitions inside it, but in the centre is dug a circular pit. Outside the hut is a thorn fence with only one entrance. This hut is called *thingira* (a word which has been borrowed by the neighbouring Kikuyu and applied to ordinary bachelor huts), and is the centre of the whole of the *Eunutu* ceremony. During the whole of the nine days of the ceremony this *thingira* is used as a "club-house" by the men of the age-group concerned with the ceremony, but there are certain restrictions, and it is these restrictions which give the key to the meaning of the whole ceremony. It is considered both ignoble and dishonourable for any man in the warrior groups—and more especially the junior warrior groups—to have any sexual relations with any but the uninitiated girls, but, of course, cases do occur either openly (*see* Forced Marriage) or in private. Now all members of the age-group concerned must be present at the *Eunutu* ceremony, but only those who have strictly observed the above regulation and have never had sexual relations with an initiated girl or married woman may enter the *thingira*. In order that no one may do so under false pretences the entrance to the *thingira* is bewitched by the elders, so that if anyone ineligible enters he will surely die. 561 34 [192] [834] [754]

The *thingira* is not big enough for all the warriors concerned to use it simultaneously, and each day for the nine days there is a public ceremony when the various individual territorial groups are expected to enter. For this ceremony all the friends and relations of those who are expected to enter collect round the entrance and each individual as he enters is greeted with applause, as he has shown by entering that he has not dishonoured himself or his family. Those warriors who dare not enter try to slink away unobserved, for they are disgraced. Inside the hut—as mentioned—is a large hole which is used as a cesspool, into which the men who enter the hut must urinate. This cesspool is also bewitched as an extra precaution, and anyone who has falsely entered and evaded the witchcraft of the entrance will certainly die upon urinating in the hole. All those who enter the *thingira* on any given day during the ceremony sleep there that night, and also have milk and meat brought them for food, and sit and talk for hours. During [514] [754]

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

777 It is lucky to see a fish eagle (*ol korpellia*) sitting on a tree if it is facing the observer. It is unlucky to see a single wild pig, but lucky if a number of pigs cross the path from left to right in front of the traveller.

There are several other superstitions, but they seem to be held in little, if any, more importance than most of our own, *e.g.* seeing the new moon through glass, encountering magpies, spitting when a hare crosses one's path, etc.

514 576 *Spitting* is a greeting and brings good luck. One is asked to spit on a new-born baby. I have sometimes been spat on in a similar way by very old men and women—a somewhat trying ordeal which had to be patiently endured. Moreover, a Masai may spit on his palm before shaking hands in order to give an exceptionally warm greeting. It is then etiquette to follow his example.

173 *History.*—The Masai have little historical tradition. Some of it is given in Hollis, pp. 266–273. They are said to have come from a place in the North called by them *Endigir* a hundred generations (of 15 years each) ago. The generation names from the present time, working backwards as far as they are remembered, are:—*Il Tuati, Il Talala, 'L Aimer, Il Nyangusi, Il Tuati, Il Kidotu, I Merishare, Il Tiegi, Il Salaash*, and *Il Meshopo*. Those before this have been forgotten. When they left Endigir there were no *Laibons*, so the elders arranged about the ceremonies. The warrior and age-group system was already in being, having been instituted by Naiteru Kop (*see* Hollis, p. 266). The customs of group marriage and of free love between the warriors and the girls were also in existence.

There were four tribes in Endigir—the Masai, the Dorobo, the Kikuyu and the Il Kunono (smiths). God gave the cattle to the Masai and the wild beasts to the Dorobo. He told the Kikuyu to go to the mountains and the place of many rivers and to eat grass. He gave iron to the smiths and provided them with stones to beat it with. These four tribes were all friends together.

262 *Restrictions as to Food.*—Besides those mentioned above as applying to warriors and junior elders, the following apply to all Masai:—

They must not eat the flesh of wild animals.

They must not drink milk soon after eating meat.

Women must not be seen eating meat or drinking milk by men of their husband's generation.

805 *Months and Days.*—The Masai divide the year into the following months:—

Ol Adaalo. Meaning unknown

Or'at — Grass in the hollows. (About February.)

O Ānyi Oing'ok = When the bulls are tied up.

Ol o Doyoerie ol o Ingokwa = When the Pleiades are in the West.

Ol o Olepunyi Ingokwa = When the Pleiades are in the East.

Ol Guju Orok = The short black bristles. So called because it is the month of ceremonies, and therefore heads are shaved.

/50 cont./

837 [861] /footnote 1 cont./ husbands. Babies to whom a woman has given birth from thus living with another man belong to the husband, even though they also call their genitor father.

847 They abort an immature fetus when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a potion are used, which are said to be innoxious during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

833 They are accustomed to having intercourse lying on their sides, the woman's upper knee placed over the man's loins. They do not customarily cohabit except at night. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would retain nothing but water.

[864] Boys and girls already begin to practice cohabitation at the age of eight to ten.

• 514 It is considered extremely shameless to break wind in the presence of women.

produced that unpleasant setting of the teeth which belongs to him in common with the whole of his race. The gums being tender, and the beef tough and leathery, the teeth acquired an outward projection unpleasant to behold, and, what was still worse, they seemed to become separated from each other, till they appeared as isolated fangs. It was noticeable also that his gums were of a very dark blue colour. Neither of these characteristics, however, were any disad- 855

vantage to the young Masai, as in his country to be hideous is to be beautiful.

As a boy Moran—for such we may call him for convenience' sake—was pleasing in the extreme—when his mouth was shut. He was the very ideal of an imp, and for diabolical versatility would doubtless have made an admirable page, such as were so much in vogue in former times. At a very early age Moran broke away from his mother's apron-strings, and with miniature bow and arrow aped the bigger boys in their play. As he had no limes to sell, he only caused his mother's laughter if he turned up encrusted with filth. He 857 855 515

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

855 was not even put through the horrors of the tub. Sometimes, however, his mother, in a fit of affection, and imbued
515 with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

858 And so life went on, and he was promoted to the rank of
281 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
304 leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

857 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[361] occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[492] these occasions conveyed their household gods, though his
[782] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and vice versâ in the wet season. Beyond these studies in practical geo-
861 graphy his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngái (God, or the heavens). He heard also that the place of Ngái was among the eternal snows of Kilimanjaro, or that the thunders of
[623] Donyo Ngái (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock
[516] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the whence, whence, and whither of life. We can imagine him appeal-

Kenya

are ready for one night's occupation. Text-fig. 3 shows its ground plan. It takes 342
two to three hours to build. If it is to be occupied for some time the walls and roof are strengthened and the hides are gradually replaced by cow-dung plastered on a backing of *Leleshou* leaves or other suitable vegetable material. The whole, including the calf pen, is enclosed and roofed with cow-dung plaster. A small hole (*E-Luaye*) is usually made at the top of the wall above the fire-wood store to let out some of the smoke. The beds (*En-Dobash* or *E-Ruat*) are made of hides put on top of poles 352
placed close together and raised about a foot from the ground. Text-fig. 4 shows the ground plan of a finished hut.

Grass tufts on the floor are just left to dry up and get trampled out of existence. 342
Repairs are done by the women of the house, and consist in filling up cracks with [356]
wet cow-dung. Fleas, bugs and rats are uncommon in Masai huts. Dried puff-balls [751]
and dry cow-dung are sometimes burnt as an insectifuge. The young people are 515
not infested with body lice; but these abound on the aged, taking refuge in bead necklaces and other ornaments.

When the people move on the village is usually left to fall into ruins, but it 361
may be reoccupied later if desired, and if it has not yet fallen beyond repair.

000 Clothing and adornment. -- Cloth materials. -- Leather dressing. -- The individual articles of clothing. -- "Beautifying" the body, head hair, beard, body hair. -- The hair style of the warriors. -- Painting of the face and body. -- Caustic and incised decorative scars. -- Teeth. -- Fingernails.

291 177 [439] Cloth materials, such as the caravans from the coast engaged in the ivory trade in the Masai steppes take along trade goods, have not yet ever really succeeded in being adopted among the Masai.

For the trade this is, of course, regrettable, but for one who comes into frequent, daily contact with the people it is really fortunate, for there is scarcely an uglier and more repulsive sight than a native decked out as completely as possible in European clothing, especially if one sees him thus amidst his fellow tribesmen in their traditional garb exactly suitable for them. Not only is the eye offended, however, but also the nose and further many another. One should merely consider that the people have never learned how to manage with such clothing and that generations will pass before its use has to a certain extent become part of their flesh and blood. [296] /136/ A cleansing of the things therefore does not occur and likewise the regular drawing off and on. The native hangs on his body whatever he gets and keeps it on until it falls off by itself, so to speak. [515] [147] Naturally he always stinks and as a rule also harbors all kinds of vermin. One day I met with a European caravan a Masai youth whose former master had departed some six weeks previously and, upon leaving, had given him a pair of shoes. The boy told me quite innocently that he had put the shoes on at the time and had never removed them since! The people of the caravan, European and Colored, confirmed this statement. Such aesthetic aberrations are very rare exceptions among the Masai, however. Every sensible person disdains bedecking himself with such trash, and that boy would also /Ill. 43 appears here/ come to his senses again when the shoes were in shreds. From then on I always saw him only in Masai dress.

/184 cont./

757 With toothache (eńg ga ol alai) one bites on a very hot residuum
[164] of fat with the aching tooth. Pieces of twigs of o'remit (Salvadora
[515] persica L.) and ol abalasas (Dodonaea viscosa L.) chewed to resemble
a brush at one end serve as toothbrushes.

[152] For rheumatic pains in the muscles one makes use of massage,
which is practiced by the women, or one makes poultices with the
pulp of the pulverized root of o'remit (Salvadora persica), which
[593] also finds use otherwise as a "mustard plaster." Married men have
[385] themselves massages by their wives to get rid of pains in the leg
muscles after long marches, whereas the warriors scorn this help as
unmanly. Furthermore one administers a root decoction, preferably
mixed with a broth from steer meat, of o'rarait (Cissus rotundifolia
[Forsk.] Vahl.) or of ol iogiónо (Pentas zanzibarica [Kl.] Vtke.),
or also a decoction of the wood of ol gonjéi (Rhamnus prinoides
l'Herit.). For rheumatic pains in the back one drinks a root decoction,
sweetened with honey, of ol asasia l os subertai (Osyris tenuifolia
Engl.). To cure articular rheumatism a root decoction of ol ogíno
(Boerhavia diffusa L.) is administered. Besides these remedies, those
that are regarded as diaphoretic, especially the above-mentioned ol
amboschi (Momordica cardiospermoides Kl.) and eńg aitetoijai kete
(Aneilema Johnstonii K. Sch.), are also given.

276 Other than for curative purposes the warriors regularly, and, to
be sure, for the entire duration of their membership in the warrior
[126] standing, take various nerve /185/ stimulants. These are taken
especially on war expeditions and, even more, during the meat
feasts forming the preparation for these. One of the most popular
stimulants is the bark of the frequently mentioned ol mokotan
(Albizzia anthelmintica). One pounds a piece of bark bast the size
of two hand-palms with a club and then lets it steep for a few minutes
in still hot meat broth. The other stimulants are: ol dinjai or os
sogurtuti (Cissus quadrangularis); an arm-long piece is cut up and
boiled in water. The extract is taken mixed with goat-meat broth.
Equally strong in effect is the root of ol oñorua (?). One takes a
piece of root three centimeters thick and approximately ten centi-
meters long, chops it twice, and cooks it with beef broth. The
decoction smells disgusting.

101 144 related to the Suk-Turkana and Nandi-Lumbwa[1]. Somewhat more distantly allied to the same stock are the inhabitants of South Kavirondo or Ja-luo. These races again show clear resemblances to some of the peoples who inhabit the banks of the Southern Nile, such as the Acholi, Bari, Latuka, Dinka, and Shilluk. The whole group are sometimes classed together as Nilotic, and have many peculiarities in common. Their languages show a considerable, though varying, degree of [197] affinity; physically they are tall, thin men, with features [142] which are not markedly negroid, and are sometimes almost Caucasian: several remarkable customs, such as the nudity of [516] the male sex and the habit of resting standing on one leg, are found among them all. The closest connexion seems to be between the Acholi and the Ja-luo, and between the Masai, Latuka, and Bari. The Masai, Nandi, Lumbwa, Suk, and Turkana all possess in a more or less developed form a military organization which obliges all the male population, between the ages of about seventeen and thirty, to submit to a special discipline and constitute a warrior class. A similar organization does not seem to be recorded among the tribes who dwell along the Nile[2]. These latter are not a homogeneous group, so that the word Nilotic must be used with caution. The Madi, who occupy a large portion of the country between Lake Albert and Gondokoro and extend well to the east of the river, are linguistically different from their neighbours, and apparently represent an invasion from the west, though in customs they do not seem to differ markedly from the Bari.

174 197 A glance at the map will show that from the Rift Valley to the Nile there runs in a north-westerly direction a broad belt of non-Bantu languages, more or less allied to one another, Masai, Nandi, Suk, Turkana, Karamojo, Latuka, Bari, and Dinka. The Karamojo appear to be Bantus who have been forced to accept an alien form of speech. This distribution of languages seems clearly to suggest a south-eastward movement from the country between the north of Lake Rudolf and the Nile. The hypothesis is rendered more probable by the 174 fact that in East Africa as elsewhere the course of invasions has been mainly from the north to the south. This is certainly

[1] The name Lumbwa is confusing. It is really a term of opprobrium applied by the nomadic warriors to agriculturalists of their own or allied races (not, apparently, to Bantus). Hence the 'L-Oikop are often called Lumbwa Masai. But the name is popularly and officially applied to a tribe closely allied to the Nandi who live to the south of the Nyando valley.

[2] Baker perhaps alludes to something similar among the Latuka whose young men, he says, live for fighting only.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

593 concerned. One who is expelled from the family because of bad behavior is, as a rule, taken in again upon payment of a head of cattle or a goat. Moreover he hands over the animal to a man friendly to his lineage. The latter takes it to the father of the one expelled and requests reacceptance for him. If it is refused, the one expelled seeks and finds acceptance in the same manner as the detached one. Detachment and expulsion occur only in very

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
[753] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence
[231] of neglecting this custom. Bringing milk into contact with meat is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

561 /68/ to enjoy, to the end of his life, respect and esteem based on his life's experience and his father- or fatherlike-position, which he occupies in relation to his immediate and more extended sphere.

A female individual, until her circumcision, is regarded as a girl (en ditŏ, n dŏje), is called es siboli (pl. es sibolio) during the circumcision, until the healing of the wound; after that she is first called e siẽngiki (pl. siẽngikin), after the beginning of the menopause 'n akitok (pl. n akitwá) or en dańgile (pl. n dańgilẽn), the latter term also often used formerly instead of e' ńgorojoni = married woman, whereas now one only rarely hears it with this meaning. As soon as her head hair turns gray, she is called Koko = old woman.

which have a strong stimulating effect. The rest of the meat, roasted at an open fire, is then eaten by each ol gibet in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest forest meal takes place as a rule in the month kipēr. Since the pasture is poor then, the livestock gives so little milk that the warriors sometimes live for a whole month on almost only meat.

701

At the head of the warriors of a kraal stands the speaker (ol aigwenani or ol airohani). The badge of his office is an especially beautifully worked club or rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southeast of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a baton in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. What the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

• [516]

727 it for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutilated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as ebor além. But [784] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few [583] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child [599] exactly like his own. A ceremony of adoption does not exist; the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the home kraal; in the evening a thorn fence is again built, and at the same time the share of the booty destined for the ol aunoni is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit eating. It is called, for example, kirima, because men fell on both sides. Other names are [411] [701] [291] [516] bóbeit if the provisions in living livestock taken along on the expedition did not last, and the warriors, out of hunger and contrary to the existing custom, had to eat tree fruit; ñgéré if the El móran suffered on the way because of a shortage of water; ñgeríria, formed from the call matiógiria ñgo, that is, approximately: "only courage, if it is not possible, what does it matter," a frequent saying [703] if one believes oneself inferior to the opponent in strength. The next morning, early, before the departure, the leaders distribute the booty

CHAPTER 10

Masai Herds and Mara Lions

I

THE Masai have won respect by their contempt for civilization and all that it has offered them. For half a century Europeans have been tempting them with all the material bribes, indeed even non-material ones, for which every Bantu and Nilotic people is avid. There is scarcely an African of the fat lands who would not sell his soul for a school certificate. The Masai have rejected school certificates with a proud and lofty disdain.

Will a certificate fatten a bullock or swell the belly of a cow? Masai hearts are with their cattle; they desire no finer destiny for a son than to walk in the dust of a larger herd than his father's. The young man who dreams of glory sees fine white bulls and brindled cows and green grass knee-high, he does not see the stone bungalow, the shining motor-car, the well-cut suit, the framed diploma so alluring to his darker fellow-countrymen. He likes to wear his hair in matted pigtails smeared with red ochre and rancid butter, to stand with one foot against the other knee, to eat a compound of bullock's blood and curdled milk, to carry his long spear and to keep his women in their beads and coils and fly-infested mud burrow as his ancestors did—those ancestors whose lion head-dresses and painted shields filled the hearts of lesser breeds with terror, and won the right of conquest over the steppes of eastern Africa from their northern Somali deserts to their southern tsetse bush.

For the Masai have pride, and pride is a quality we recoil from in ourselves and half-admire, half-deplore in others. An Englishman today must stamp with the hob-nail boots of equality upon the little shoots of pride that cannot help but spring up in his heart; but when he sees the fine, free growth of it in others, an envious respect attacks him. For

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

262 opened a vein and drank the blood fresh from the animal.
884 This proceeding of our voracious young friends was a wise
though repulsive one, as the blood thus drunk provided the
[263] salts so necessary in the human economy; for the Masai do
not partake of any salt in its common form. This sanguinary
draught concluded, they proceeded to gorge themselves on
the flesh, eating from morning till night—and keeping their
cook steadily at work. The half-dozen men were quite able
to dispose of the entire animal in a few days, and then they
returned to the kraal to resume the milk diet.

884 If they lived an ascetic life in the matter of food, they
436 could not be said to do so in other ways. Life in the
warriors' kraal, as may easily be conceived, was promiscuous
in a remarkable degree. They may, indeed, be described as
a colony of free lovers. Curiously enough the "sweetheart"
system was largely in vogue, though no one confined his or
her attentions to one only. Each girl, in fact, had several
sweethearts, and, what is still stranger, this seemed to give
rise to no jealousies. The most perfect equality prevailed
between the Ditto and El-moran, and in their savage circum-
stances it was really pleasant to see how common it was for a
young girl to wander about the camp with her arm round the
waist of a stalwart warrior.

884 Till a war-raid was planned, Moran, our interesting
517 *protégé*, found he had nothing to do but make acquaintances
701 and amuse himself with the girls. His cattle were looked
after by some poor menials, and though the kraal was sta-
tioned near a dangerous neighbour, yet no fighting took
place. It was, however, a rule in the warrior kraals that no
fence for protection was allowed, hence the utmost vigilance
had to be exercised. Moran thus in the course of his duty
had frequently to act as watch. At other times he practised
various military evolutions, and he kept up his muscle by
the peculiar mode of dancing described in the Taveta chapter.
Unlike negro tribes, they led what might be called a serious
life. They had no rollicking fun, no moonlight dancing, no
[533] lively songs, no thundering drums. No musical instrument
[534] whatsoever enlivened the Masai life, and their songs were
entirely confined to such occasions as the return home from
a successful raid, or the invocation of the deity. As soon as
darkness fell upon the land the guard was appointed, the
cattle milked, and everything hushed up in silence.

624 Shortly after joining the kraal, Moran was called upon to
record his vote in the election of a *Laiuan* and a *Laiyonani*.

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eng an el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
791

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

512 /36 cont./

[264] At one o'clock in the afternoon, the noon meal is eaten, after
[462] the men who have looked after the cattle in the pasture have
[517] returned. After the meal one takes a nap, plays a little game,
524 or picks up some manual work (making articles of clothing or adornment, clubs, gourd bottles, etc.). The principal game

Fig. 8. 3/10.

of the Masai is the board game (en dodoi, en dodo) (Fig. 8). Two rows of six to ten depressions or compartments running side by side in a longitudinal direction are carved into a thick board about two feet long. The rules of the game are as follows: the board stands between two players; to each of them belongs the row facing him (ol mátua, el mátuan). Now each one places in each compartment (en qurtóto, 'n qurtót) of his row four stones (os sóld, es sólido) (2).

> 2. One uses for this round river-pebbles or the fruits of the ol gúlangulu (Caesalpinia Bonducella Roxb.).

The player who starts takes the four stones out of one of the compartments of his row and puts one of them into each of the next compartments to the right. From the compartment in which he placed his last stone and in which there are now five, he removes these and, as before, places them in the next compartments, whereby he passes from his own row to that of the opponent. He proceeds in this manner until the last of the stones taken from a compartment happens to fall into an empty compartment.

/120 cont./ If they
181 spare women and children in war, it is not out of compassion, but
[567] solely in order to make them useful as slaves, whereas the Masai do not keep such. In general one cannot attribute to them a lasting vindictiveness toward their own kind. The Masai only in part possesses the courage attributed to him. Their extraordinary impudence often makes them appear more courageous than they really
[593] are. Their sensuality equals that of most East African tribes. The
[837] wife is at the disposal of every man who belongs to the age class
[561] (both ol boror and ol adji) of her husband and desires her. It is
593 obvious that, as a result of such conditions and in conjunction with the prevailing polygyny, there can be no question of a proper family life in the higher sense. For her own husband the woman is especially the labor force that he needs for household and livestock management and the means of fulfilling his wish for as many progeny as possible. Accordingly her treatment depends on how she measures
562 up to these tasks. Moderate beatings are not uncommon, but rough
461 treatment almost never occurs. In contrast to the men loafing
[462] about lazily, the women are busy all day long. For the married
[517] women there are scarcely any amusements except dance and song; they had their share of them before their marriage, when they could have their fling in the warrior kraal. In public life, as well as with respect to her own husband, the wife has no rights. Of course the Masai woman does not regard her servile position as such. She knows nothing else, and fortunately one does not miss a comfort that one
562 does not know. As soon, however, as she is transplanted from her
461 own tribe into a foreign one through kidnapping in war, her willing-
178 ness to work immediately comes to an end. The less oppressive
177 her new position is, the lazier and at the same time more demanding she becomes. She suddenly regards herself as too good to work, and her desire for clothing and adornment often increases immeasurably. /121/ Accordingly, her interest in the household becomes less to the point of disappearing and her passion for amusement great. The reason for this phenomenon undoubtedly lies in the fact that she regards life among the hated and despised el mEg as a disgrace and the work required of her by them as an insult inflicted on her.

/124 cont./

151 proved by the fact that they prepare the ground plan of the huts, the
[804] wire spirals and wire rings serving for adornment, etc., without mechanical measuring devices. For the same reason one recognizes their sense of symmetry in their weapons.

151 Following the Holmgren zephyr-yarn procedures, I examined 87
125 Masai, and, to be sure, 46 men and 41 women, on their sense of color. The test showed that of all only one man had "weak color sense," all the others, on the other hand, had "normal color sense."
[822] Here too the symbolic significance of the colors should be considered: black = calm seriousness, red (blood) = war, green = peace, variegated, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly, those of persons known by them not at once, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them; they regarded such a one as incomplete.

153 Their powers of orientation in the region and their memory for
151 paths once taken or stretches of land traversed are excellent. Their
153 memory for numbers seems to be better than that of most tribes in the
802 interior of East Africa, since, unlike the latter, they do not use
[211] mechanical aids such as notches in sticks, knots in string, etc. Their power of conceiving numbers does not seem to go beyond five; only a few could recognize at a glance the correct number of more than five objects placed before them.

53 Their feeling for plastic art is shown by the rich and not unhand-
• 517 some adornment, the handsome forms of their weapons, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking; their singing is arbitrary and without rules, the main thing in it is the text and the alteration in the vocal execution. They do not have musical instruments, for the antelope horn of the summoner to legal proceedings serves only to attract the attention of the people through loud noises. The following is a
533 common song to accompany the dance (1):

1. Recorded by Herr Stabsarzt /staff physician/ Dr. Skrodzki.

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eng an el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in: in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

881 /63 cont./
[304] words and blows by the assembled warriors, because they did not
[866] rear their son to have the hardening and self-control necessary for
[526] a warrior, while the weakling is reviled for a long time afterwards as ebiryo = coward, or tŏrŏnō = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are
[372] regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (Juniperus procera). The festival is called ol ogŏr l el aijok amerăte,
[252] that is, the festival of the circumcised boys. Unbelievable amounts (1)
[262]
[261]

1. I once observed that my four Masai boys together at an evening meal ate over 80 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take
[522] some fresh milk. People joke and laugh and everyone seems to
[521] want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which
881 the budding warriors will augment the paternal herds. Suddenly the
626 glances of a few who had just been joking darken and turn toward
152 a distant hut at whose door a solitary old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their imprecations into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

/108/

576 521 [203] A brief conversation in which news is exchanged is added to the greeting as a rule. This explains how even in the barren steppes any news spreads with great speed. If strangers meet, the older man first questions the younger one, or the man the woman, about name, origin, etc. The first question always runs: "Where do you come from?" To this is added the following: era enia 'n gischomi = to what tribe, era enia ol gelata kitok = to what principal lineage, era enia ol gelat' ate = to what sublineage do you belong? It is further asked: eñ ai menje = who is your father, eñ ai notonji = who is your mother, and kedja eñ garnaino = what is your name? The one asked readily gives an answer, but generally does not question the other one: on the contrary he goes on without knowing with whom he spoke. Good breeding demands this.

576 574 If a stranger comes to a kraal whose owner he does not know, as a rule he asks one of the children playing in front. The reply then runs: My father (baba), and to the question who that might be, the little one looks at him astonished and asks: "Do you not know my father then?" To the further question as to where he might be, the child points to a hut in which it surmises the father to be. Only small children may [201] point with the finger in the direction of a married man; older ones and adults indicate the direction by turning the heads toward it and at the same time slightly pushing out the lower jaw or the lips or even their tongues. If the stranger has sought out the hut of the old man, he squats in front of it and waits until its owner comes out of his own accord or is called out by one of his people. Now he first questions the guest in the same way as at an encounter and then calls one of his wives or one of his children to bring milk. The gourd bottle is first handed to the host so that he can make sure it is generously filled. He then hands it on to the guest. When the latter has emptied it he is asked whether he would like still more: to answer in the negative would be an offense against good breeding. Hospitality is discussed in another place: it is only to be mentioned that the guest need not express any request. Though it is expected of him that he will feel quite at home, one nevertheless still specially offers him everything available.

/108 cont./

576 When an acquaintance wants to enter the hut, he calls -- corresponding to our knock -- "eh opěn eńg adji" = female owner of the hut, whereupon from inside, like "Come in!" comes the answer, "ja na ijŏk" = "we are here." Thanks for a favor shown or a gift is hardly ever customary, only very rarely does one hear the [201] word ăschě = thanks. A request is refused in that one "warns off" with the hand, the palm of which is turned toward the one making the request.

The farewell runs "aija amalo" if one person is going away, "aija amerda/109/kipo" if several take their leave, and means "I am going" or "we are going." It is used similarly by all people and only by uncircumcised children is not accompanied by the handshake. A friend taking his leave is requested to remain longer with "milo" = 521 "do not go." In conversation with their kind the Masai are very talkative. The warriors among themselves relate old and new war adventures, which are presented with lively gestures and in exaggerated embellishment. Usually a fellow tribesman or lineage member plays the leading role in it; the enemy is always cowardly or lets himself be outwitted. Together with the young girls, the conversation soon becomes unrestrained and launches into racy witticisms and bold jokes. In the kraal of the married, men and women sit in separate groups. The former speak quietly and often in subdued voices about memories of their youth, stock raising, etc.; the latter, on the other hand, laughing and with extraordinary glibness of tongue, converse about gossipy tales in which some slur is cast on Mr. or Mrs. So-and-So. But let it be said to the credit of the Masai that their gossip is childish and harmless. One does not find malicious scandalmongers of either sex among the Masai and probably not among the other so-called primitive peoples. They rather seem to be an attendant [157] phenomenon of a higher level of culture. In accordance with the lively, impulsive nature and especially also the abnormal irascibility of the younger men, one very often hears coarse and bantering invectives. Their coarseness probably sufficiently explains the peculiar [576] ethics of the Masai. Crude invectives may not be used by women toward men.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

727 the property of the successful warriors. A warrior can have no property, and hence they all become his father's.

[421] The spoil being divided, the party were next able to do full honour to the men lost in the raid—those being considered worthy of all praise "who *rush* into the field, and foremost fighting *fall*;" while men who die ignobly at home are only worthy to be despised and thrown to the vultures. Hence the warriors howled and jumped into the air in the dance, till the dead were duly commemorated.

648 In this manner, Moran saw a good deal of fighting, and soon rose to fame in many a campaign to U-kambani, Gallaland, the Coast region, Sūk, Kavirondo, Elgumi, and Nandi. The two latter tribes proved to be the most difficult to deal with, the one from its great numbers, the other from its fighting powers.

669 Civil war next broke out, and he had to proceed to the assistance of his brethren of Naivasha, who were hard pressed by the Wa-kwafi. In these civil wars, the affair was gone about in a very civilized fashion: Sudden and unexpected attacks were not indulged in. A cause of war was first discovered—probably, as in more civilized countries, merely to keep their hands in or as an outlet for internal unrest. Preliminaries were then settled most amicably, and the stakes arranged. A place was next chosen as the field of battle, and to this all the warriors of the two districts came with their cattle and young women. As the fighting would be protracted, a truce was declared, while kraals were built in the opposing camps. A certain number then proceeded from both sides, and like gladiators in the arena, they closed in furious strife, spurred to deeds of daring by the women on both sides. The Wa-kwafi were the conquerors, and the cattle of the Masai fell into their hands; and following up their advantage, they nearly drove their brethren from the entire region. (Of this war I have already spoken.)

522 186 As a mild relief, and a variation from these serious matters, it was the dearest delight of our swaggering young friend Moran to "draw the badger" in the person of the Swahili porters who might be meekly endeavouring to pass through his country. These he would dub "donkeys," in allusion to their being burden-bearers like those interesting quadrupeds. He could keep the kraal in a roar of delight, as he described how he had frightened this one out of his wits, or spitted another on his spear, or smashed the skull 431 of a third into jelly. The senengè and the beads he re-

881 /63 cont./
[304] words and blows by the assembled warriors, because they did not
[866] rear their son to have the hardening and self-control necessary for
[626] a warrior, while the weakling is reviled for a long time afterwards as ebiryo = coward, or tŏrŏnŏ = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are
[872] regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (Juniperus procera). The festival is called ol ogŏr l el aijok amerăte,
[252] that is, the festival of the circumcised boys. Unbelievable amounts (1)
[262]
[261]

1. I once observed that my four Masai boys together at an evening meal ate over 80 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take
[522] some fresh milk. People joke and laugh and everyone seems to
[521] want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which
881 the budding warriors will augment the paternal herds. Suddenly the
626 glances of a few who had just been joking darken and turn toward
152 a distant hut at whose door a solitary old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their imprecations into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

/121 cont./

201 152 In contentment the eyes sparkle, and there is a happy expression on the face.

201 152 577 181 The stubborn one often presses his lips together tightly. In lying, especially in stiff-necked lying, the one concerned usually exhibits a well-played /122/ candor and the absence of any trace of consciousness of guilt, which often increases to the point of indignation, as though over an unjust suspicion. The Masai shows here a great talent for acting, which he probably has in common with most of the dark-skinned African races. Even when he sees himself convicted and has gained the impression that the judge or master is convinced of his guilt, he does not stop lying, but often persists for a long time in the behavior just described. More rarely his look gradually becomes uncertain, the eyes blink, the skin darkens somewhat, the voice becomes husky and somewhat hoarse and his facial expression says approximately: "Now nothing more will help!"

[147]

201 152 As a sign of contempt one spits before the one held in contempt. More rarely among men, but commonly among women, the same feeling is expressed by pushing out the lips and lower jaw and simultaneously extending the head forward.

The feeling of disgust is manifested by spitting.

[147] An extreme degree of fear is shown by a blanching of the skin, especially of the face, trembling of the hands, trembling in the voice, blinking of the eyes, which move unsteadily toward the sides, whereby the head either stays still or is turned in the direction of the eyeballs.

[522] Laughter often increases to a pitch that brings tears to the eyes.

In order to indicate that one is not in a position to do or to prevent something, or to protect oneself or a friend from a loss, to convince someone of the truth of one's words, one shrugs one's shoulders, turns the elbows inward, spreads the hands out, and opens the palms while raising the eyebrows.

Petulant children make a face as though they intended to start to cry.

Games.

Small Masai children collect pebbles or berries, with which they play at cattle and sheep. They also build huts and kraals in the sand, and they make spears out of bulrushes. Little girls make dolls of the fruit of the sasage-tree[1]. 857 [824]

Big boys play about in the herds of cattle. They choose a quiet animal, and pretend it is a hut. One boy stands by the cow whilst the others go and hide. When the latter return, the one who is standing by the cow chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; anybody who manages to escape and touch the cow has won. This game is called flambwen.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called 'n-dota. This game is called en-gubei. 524 [887]

The warriors also play this game, but they do not care about it much. They have no boards, and make holes in the earth.

creatures, with the vultures and the storks, tore their flesh under the light of the moon. Nothing remained but a couple of grim skulls and some bloody bones when the sun rose over the grassy plain in the morning; and the young urchins of the kraal kicked them about and laughed as they threw them at one another.

MASAI MARRIED WOMEN, RUIRI.

Such is the history of the commonplace life of Mawa as retailed to me by men who had lived with him as boy, warrior, and husband, and for whose accuracy and truthfulness I can vouch. The next traveller will listen to the same story, and will doubtless be able to verify the main features of the narrative.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

particular relation. The naming ceremony is as follows :—When the child can run about a *small* ram is chosen and killed by the women of the village and eaten by them (and not by any men). The child is then given a name which is chosen by the assembled women. It is usually named after some friend of the family either living or deceased, and great care is taken that the person after whom the child is named is (or was) good-looking and of good character, as otherwise the child would grow up ugly and of an evil nature. This is the name used by the family and by friends, but after initiation a boy is always called "Son of 'so-and-so,'" and not by his own name (except by his family). After a man is married and has named sons of his own he is called "Father of 'so-and-so.'" 553 551

Teeth Extraction.—As soon as a child of either sex has cut all its milk-teeth the two central lower incisors are knocked out, and this operation is repeated when the permanent teeth grow. There is no ceremony attached to this removal of the teeth, which is performed with a small, sharp two-edged knife. The reason given for this practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, water and gruel can be poured in through the hole so formed. 304 [852] [912] [758]

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced in the cartilage round the upper part of the ear, and as soon as the boys start herding cattle and the girls start drawing water they have the lobes of the ears pierced. Ears are pierced in order to prepare them for carrying ornaments, and the holes are stretched to the size which the individual requires by means of a gradual increase in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their early days, but I could not obtain any details from my informants. 524

Clothing.—From a very early age children are given small bits of skin as clothing, and the boys have small sandals made for them. 291

Food.—The food of children is the same as that of grown-ups and is restricted to milk, fat, and meat, as no crops are grown. 262

PART II.—BOYHOOD.

Herding.—As soon as they are considered old enough (and this depends upon the number of other boys in the family available for this work), boys are sent to help herd the sheep and cattle, and they continue to do so until they are old enough to start preparing for initiation. 857

Sex Life.—Initiation is often delayed until some little time after puberty, and it is not considered in any way wrong for these boys to begin indulging sexually as soon as they like, provided that they observe certain restrictions. They may do as they like with the younger girls in the neighbouring villages, provided, of course, that they observe the law forbidding sexual relations with any member of their own sub-clan, 836 883 684 [834]

FURTHER NOTES ON THE MASAI OF KENYA COLONY.

[WITH PLATES XIII–XV.]

By D. STORRS FOX.

Preface.

MY excuse for writing the following is that in the capacity of District Officer, Kenya Colony, I have administered the Kenya Masai for periods aggregating rather more than three years between 1925 and 1930. Being able to speak the language fluently, and having observed their life and habits from day to day, I can supply a certain amount of information supplementary to the notes recently published in the *Journal* (pp. 185–209) by Mr. Leakey and the earlier work of Sir A. C. Hollis (*The Masai*, by A. C. Hollis, Clarendon Press, 1905). I have avoided repeating facts already recorded by these two authorities except where I can add to them or correct them.

In the following notes the first part consists mainly of additions to and comments on Mr. Leakey's article. Later on, I have dealt with other matters with which I am conversant. By the Masai I mean the people who comprise the territorial sections enumerated in the age-group table below. There are other tribes sometimes called Masai, *i.e.* the Uasin-Gishu, Arusha, Samburu Njempe and Nguruman, of doubtful orgin and divergent customs to whom this article does not refer.

The Masai are a secretive people, suspicious of strangers, and unwilling for the most part to discuss with them their customs. But there live amongst them a number of natives of other tribes such as Kikuyu, who have been adopted by the Masai. Such folk are very ready to expatiate on Masai customs, but their testimony is often misleading because it is only half the truth.

Until recently I had no idea of setting down in writing the facts which I knew about the tribe. I made myself acquainted with their language and customs simply because, without such knowledge, I should have been largely unable to appreciate their point of view or make decisions and give advice of value to them.

As there are many things still to learn about the Masai, I have omitted the matters on which my information is as yet insufficiently verified.

Childhood. Games.—Little girls sometimes play with dolls. These are made crudely by their mothers of mud, which then dries. I have seen a little girl dressing her doll with a bit of cloth, giving it milk from a tiny gourd, suckling it at her breast and rocking it to sleep, just as a European child might do. The Masai name for a doll is *En-gai e e-sang'ap*, which means child of mud. (*See* Hollis, p. 321.)

/36 cont./

512 [264] [462] [517] 524

At one o'clock in the afternoon, the noon meal is eaten, after the men who have looked after the cattle in the pasture have returned. After the meal one takes a nap, plays a little game, or picks up some manual work (making articles of clothing or adornment, clubs, gourd bottles, etc.). The principal game

a b

Fig. 8. 3/10.

of the Masai is the board game (en dodoi, en dodo) (Fig. 8). Two rows of six to ten depressions or compartments running side by side in a longitudinal direction are carved into a thick board about two feet long. The rules of the game are as follows: the board stands between two players; to each of them belongs the row facing him (ol mátua, el mátuan). Now each one places in each compartment (en qurtóto, 'n qurtót) of his row four stones (os sóld, es sóldo) (2).

2. One uses for this round river-pebbles or the fruits of the ol gúlaṅgulu (Caesalpinia Bonducella Roxb.).

The player who starts takes the four stones out of one of the compartments of his row and puts one of them into each of the next compartments to the right. From the compartment in which he placed his last stone and in which there are now five, he removes these and, as before, places them in the next compartments, whereby he passes from his own row to that of the opponent. He proceeds in this manner until the last of the stones taken from a compartment happens to fall into an empty compartment.

/36 cont./

• 524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] are small, finger-thick, and spindle-shaped ivory sticks 15-20 [237] centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gehé ('n gehén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

1. The Masai give this name to the inhabitants of the Umbugwe area on the southern end of Lake Manjara.

during an attempted livestock raid.

861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, the mother -- and, to be sure, only she -- strikes the child rather [292] lightly on the training surface with the belt that she wears after each confinement.

855 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still • 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aetiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

/54 cont./

857 together. They build a small hut about a foot high in the customary
524 shape, and, since they themselves cannot get into it, they place a few little stones in the doorway as their children. A pile of the aforementioned Solanum fruits represents their stock of cattle and donkeys, and another one of small stones signifies their herd of goats and sheep. Small pieces of wood represent the calabashes and other household equipment. The boy now drives the livestock to pasture, while his little wife cooks the food. Then he returns /55/ home and the two eat together. Meanwhile they decide that the pasture is no longer good and they must move on. But the Solanum "donkeys" are unable to carry the things, so they quickly tie a bast string to a piece of dry cow dung and thus make a sledge. Then everything is piled on it and the journey starts. In a few minutes the sledge is broken
857 and the game is over. If several boys are together, they like to play
526 war. They divide up into two, three, or four parties of equal strength, and each builds its kraal out of twigs, in which the livestock, as previously described, finds its place. Then the parties make surprise attacks on one another, the one steals the livestock of the other, the latter pursues the victor in order to recover the booty from it, and so on, until a few blows falling too roughly end the game, and it degenerates into a little row. Small boys often go out hunting with sharpened sticks and small bows and arrows for lizards, rats, and similar animals. They are then very proud over a success, and dance, sing, and boast, as they see this done by the warriors when they come back from an expedition. In the last two or three years before circumcision a fight for a piece of meat set out as a reward for the winners represents the favorite game of the boys. Two opposing parties fight over it, armed with sticks.

145 Puberty sets in at about the age of 12.

701 /104 cont./
182 a little while, will then lead them farther. Otherwise they leave it
222 the rest.
[825] When the warriors of an ol boror notice that their bones are
701 getting old and the el barnot surpass them in strength, they agree
561 that it is now time to think of marriage. After they have obtained
582 the permission of the speaker and then that of the chief, one after the other leaves the warrior association, each one shortly before his
701 wedding. He announces his retirement by means of a feast, the ol
561 geteh l ol bäi, that is, ox slaughtering with a tournament. To this
574 all the inhabitants of the nearest kraals are invited and are shown hospitality with the meat of one or several head of cattle. As soon as these are killed, each warrior cuts off a piece of meat for himself and devours it behind a bush standing somewhat apart. Then each of those present receives his share, while the remainder is strung on sticks two meters high. For these the warriors fight with the girls and women in a game in which the latter vigorously swing the sticks, before which the former has more fear than the women, somewhat
• [526] accustomed to beatings. Then the younger ones amuse themselves and play, for instance, tag (tosudja). Before there is thought of de-
[639] parture, about five o'clock in the afternoon, a married man and his principal wife go to the host and make the following speech: "adjogi megur' ira ol morani dada ir' ol móruo, ihora ä gischu inonu, ä gera inonu, ihora naleñ, tabala 'mbas el móran, ida tada ol móruo, tabala n dogitin bäria el móran, ida tada ol móruo": in translation: I say, you are no longer Ol morani, but Ol móruo, take care of your cattle and your goats and sheep and watch over them well, leave the occupation of the warriors, now you are ol móruo, refrain from all things of the warriors, now you are ol móruo.

701 After this feast it is up to the warrior whether he takes part more
561 or less regularly in the expeditions of war. As a rule he soon marries
[582] and lives with his wife either in the father's kraal or in the warrior kraal until all his contemporaries are married. Only then are they
[591] considered ol móruo: each one builds his own kraal and removes
[145] clothing, ornaments, and braid of the warriors. He is now at the end of the twenties, his best strength has been spent. In general the Masai, just like all members of the black race, spend their lives very quickly; they age early, without ever attaining a really advanced age.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

701 may be from 50 to 100; and the anonymous *MS.* 46, p. 8, records
631 that in a *manyatta* there may be from 20 to 30 huts. The extension of the term is not clear. It may be applied alternatively to the whole group forming a *manyatta*, and to a subdivision of this. Thus, we find in *MS.* 48 that each *sirit* is said to have its own 'portion' of the *manyatta*. Similarly, Fox says that each *sirit* is commanded by a
[624] captain (*il aiguenan loo sirit*), and that the *manyatta* is ruled by a special leader (*il aiguenan 'l ol porur* – the leader of the age-unit), who is at the same time the captain of his own sirit.[108]

The fact that the members of the *sirit* "as a rule quarrel pretty regularly with other sirit of their *manyata*" is emphasized by *MS.* 48, p. 3. There is no indication that the internal organization of the *manyata* is based on the seniority of its members. We may, however, assume quite safely that that is the main principle which regulates the relationship of the *manyatta's* of the two age-units existing at the same period. No special information is available on this point, but it is obvious that members of the two age-units have their own *manyatta's* and we also know that they unite in time of war, the juniors being trained by the seniors.

Seemingly the *sirit* division has a military function and serves to readily organise warriors for raids. MEKKER,[109] however, applies the term to a special partnership which two age-mates contract
[572] on their way to the battle-field. They pledge themselves to assist each other while fighting. They refer to each other as 'my companion' (*ee sirit ai*), and if one of them falls, the other has to rescue his arms.[110] Ten or twelve such companions form a company.

● 527 The term *sirit* is further applied to the grouping of initiates
561 who come together for a meat festival (*ee sirit ol bul*). This group consists according to MEKKER,[111] of five or six age-mates who go to a segregated place where they revel on ox-meat.

The meat festivals (*ol bul*, pl. *e buli*) are held once or twice a month;

[108] Very probably this leader of the *manyatta* is no other than the *aiguenan lol kumu orok*, as indicated. The two different expressions may be taken as describing two different functions exercised by the same person. *Aiguenan lol kumu orok* means lit. "the speaker with the black club", and '*l aiguenan 'l ol porur*, "the speaker of the age-unit".

[109] MEKKER, l. c., p. 73.

[110] MEKKER, l. c., p. 83: "Die Aniguée der Gefährten ist es, dem andern im Kampfe beizustehen und, wenn er fällt, seine Waffen in Sicherheit zu bringen". The spirit as a military company is also mentioned by *MS* 48.

[111] MEKKER, l. c., p. 84.

2: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

they last for three or four days and generally take place before a raid.[108]

At this point it is relevant to discuss the relationship of military organisation and the age units. MEHLER,[109] gives a description of Masai military organisation. He assumes the existence of a standing army (das stehende Heer), in which he distinguishes the recruits, the warriors and the reserve.

The recruits are "the shaved ones" (*el barnot*).[110] These, together with "the warriors" (*el moran* — initiates)[111] constitute the peace-time force (Friedensstärke), under conscription.[112]

The junior elders come into action in time of war but they may be reckoned as members of the standing army ("... kann man als Reserve ansehen und mit zum stehenden Heer rechnen... "). The senior elders take arms only in defence of their own territorial areas and sections (Distrikt).

The above description appears to be very formal.[113] It shows, however, that military activity is not confined to the initiates but extends to the classes of elders. And this is a relevant point. We can say, therefore, that the initiates become warriors not to the exclusion of the other classes above them. A further point brought out by MEHLER's description is the distinction between an offensive army constituted by the so called recruits, the warriors and the reserve, and a defensive army in which the senior elders are also incorporated.

It would be of great interest to know how the organisation of a raid or any other military action is formed, and whether there is any relationship between such an organisation and the *manyatta*

[108] MEHLER, *l. c.*, p. 94. See also HOLLIS, *l. c.*, p. 317. At p. 322, n. 1, he states that "*il pali* are special places erected in the woods, to which the warriors retire when they slaughter cattle".

[109] MEHLER, *l. c.*, p. 73.

[110] "The shaved ones", (*el barnot*, pl. *el barnot*), is the term applied to those who have just come out of their individual initiation and have been given the warriors' arms. They are the *junior* initiates.

[111] We may assume that the general term "warriors" as used by MEHLER at this place (see also p. 56) refers to the senior initiates.

[112] MEHLER, *l. c.*, p. 73, regards circumcision as a kind of compulsory conscription (... seiner — der allgemeinen — Wehrpflicht im Heer...).

[113] One may note here that it is MEHLER's tendency to describe Masai customs in a way which fits his own scheme. As known, his thesis on the semitic origin of the Masai has so influenced his way as to make his informations in many a case unreliable.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

233 villages the shields are removed to allow mating to take place with the owner's
232 own cows. The same method of preventing mating is used with rams, but to a much lower extent. If a man has several good rams he keeps shields on a few of them at a time in order to use his rams in rotation.

233 *Blood-letting.*—Among the Masai, blood is a staple article of diet. It is either
[242] drunk hot and fresh, or cooked with bits of fat and meat into a "black pudding," or else mixed with fresh milk and allowed to curdle.

In order to obtain blood every sheep and every head of cattle is bled at intervals. Cattle are bled by one method and sheep by another. In the case of cattle, the animal is seized and held, and a thong is then tied round its neck until the vein at the side of the neck swells up under the pressure of the blood. The vein is then
[213] punctured by means of a special instrument which may be termed a "blood-letting arrow." The blood-letting arrow consists of a small stocky shaft into the end of which a small flat blade is inserted. This blade has a curved edge and is very sharp. This arrow is used with a special bow which is always small and usually very roughly made. The arrow is not shot from a distance, but *placed* against the swollen vein. The bow string is only pulled back very slightly and when released drives the arrow just far
[216] enough to open the vein. The blood is caught in a gourd and the animal released.

Sheep are bled by a different method; the animal is held and a small incision is made just above one eye and blood drawn off.

262 *Meat feasts.*—Young men and old alike indulge in frequent meat-feasts, meat
527 being a staple article of diet. No men may eat meat inside the villages, so meat-feasts take place either in special huts built at a little distance from the villages, or in a cave if there is one near by.

There are certain rules and regulations concerning meat-feasts, as follows:—

(1) No man may eat meat that has been touched by a woman.

[211] [243] (2) No Masai man may slaughter cattle himself. In every case a man of the Wandarobo tribe must be called in to kill the animal, and he must be recompensed by being given a part of a fatling.

(3) The neck, stomach and some of the intestines are always given to the women, who may come and fetch them. The breast must be given to the man to whom the slaughtered animal belonged.

(4) During a meat-feast, some at least of the feasters must sleep in the hut or cave where the meat is, and it is usual for all to do so. If by any chance the fire should go right out in the course of the night, it would be considered a very serious matter indeed. In such a case no one inside the hut may go out by the normal entrance, but must break through the walls (in the case of a cave they must break through the breakwood screen which is invariably built across part of the entrance to the mouth of the cave), and all the meat that is left over must be deserted and left to the hyenas. The breaking of this rule is said to result invariably in the death of the miscreant.

/70 cont/

The principal activity of the *of ennui* consists in keeping the people of his district together and preventing them from splitting up, which could be more or less disastrous for the island. Occasion for this is furnished by both the constant party jealousies and friction between the warriors of the various areas, who, for example, not infrequently plan two war expeditions at the same time, instead of concentrating on one, and the short-sighted selfishness of many old men, who are inclined, in the selection of new pastoring places, to think only of the quality of the pasture, instead of also considering whether the warriors are in a position to protect the desired place from hostile attacks. An enemy's success affects not only the one who loses all his property in connection with it, but is a disgrace for the whole people. In such cases the *of ennui* asserts his authority. To one who does not obey him, the authority of the *of ennui* is, as a rule, made clear to the offender by means of a beating. Besides this activity, the *of ennui*, if necessary, acts as an intermediary between the people of his district and the *of ellnui*, and sometimes his decision is conferred to legal disputes, but since in this case he is guided very little by legal principles, but rather by political decisions, one cannot actually designate him as a judicial personage. The conjecture that the *of ennui* might have something to say in matters pertaining to the cult or might make magic amulets is obvious, but does not prove to be true.

We have seen above that every two age classes form an association. If the members of this association have all been married a long time, the *of ellnui* binds them even closer in that he bestows upon the two age classes, each of which — which is to be said beforehand — but in one name, a common name. This takes place at the *of kuldi* festival. For this all the men of the association gather near the *of ellnui* and build a large heap in the vicinity of his village. Everyone brings heavy for barmacking or a head of cattle for the feast. The latter is then killed by suffocation, as at the *of gulbu* festival. The festival consists of the consumption of these things, whose climax is formed by the declaration of the *of ellnui* that these associated henceforth belong to one association (*ni mili*), which only now actually exists and are to bear a common association-name.

/70 cont./

According to this, the institution of the age classes together with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought elevates us to whether that institution did not first become formed out of a striving for such a band of warriors. The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free loves; one can see in its sequel the women's society that belongs to an age class. This in turn does in the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol olmoi given them the name for the age class. -- Shield ceremonies. -- Individual constituent parts and their meaning. -- The youths become warriors.

As soon as the circumcision wound has healed, the circumcised exchange the long apron (ol gol, ol golol) for the short skin-cape (o nagiki, /77/ nagiki), again put on their ornaments, anoint their bodies with red paint and, after they have once more shaved their heads, cut out an ol barnat (sing. ol barnat), formed from barna a half-handed, armed with spear, club, sword, and shield, into the bush to celebrate the ol gonol (ol gonol). Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect a kraal of thorns for themselves or even build small huts out of leaves. The festival consists of consuming large quantities of meat and nothing but meat. For this each participant furnishes a fat ox obtained from his father, which must be plain-colored, black if possible.

13 229 642 65

square miles adjoining the Serengeti National Park and including the Mara Triangle. The African District Council has appointed a warden and subsidiary staff to the area, and has passed by-laws for its management including control of burning and grazing. A section of the reserve of roughly 200 square miles adjoining the Serengeti National Park has been set aside as a Game Reserve Developed Area in which no grazing nor entry is allowed except by permit of the warden. With Government help they have built roads and a lodge, and the proceeds from visitors' fees go to the Masai. This is, in effect, a true national park run on a local basis by the Masai.

/184 cont./

151 proved by the fact that they prepare the ground plan of the huts, the
[90 4] wire spirals and wire rings serving for adornment, etc., without mechanical measuring devices. For the same reason one recognizes their sense of symmetry in their weapons.

151 Following the Holmgren zephyr-yarn procedure, I examined 87
125 Masai, and, to be sure, 46 men and 41 women, on their sense of color. The test showed that of all only one man had "weak color sense," all the others, on the other hand, had "normal color sense."
[122] Here too the symbolic significance of the colors should be considered: black = calm seriousness, red (blood) = war, green = peace, variegated, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly, those of persons known by them not at once, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them: they regarded such a one as incomplete.

153 Their powers of orientation in the region and their memory for
151 paths once taken or stretches of land traversed are excellent. Their memory for numbers seems to be better than that of most tribes in the
153 interior of East Africa, since, unlike the latter, they do not use
102 mechanical aids such as notches in sticks, knots in string, etc.
[211] Their power of conceiving numbers does not seem to go beyond five: only a few could recognize at a glance the correct number of more than five objects placed before them.

• 53 Their feeling for plastic art is shown by the rich and not unbeau-
619 tiful adornment, the handsome forms of their weapons, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking: their singing is arbitrary and without rules, the main thing in it is the text and the alternation in the vocal execution. They do not have musical instruments, for the antelope horn of the summoner to legal proceedings serves only to attract the attention of the people through loud noises. The following is a
533 common song to accompany the dance (1):

1. Recorded by Herr Hulsmann /staff physician/ Dr. Diedrich.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Concerning the shields and spears of the Masai warriors.

714 531 639 561

Iladuaa, l-olôigoi oo-l-muran sepiki e-irei ôbo; ôorioro.

Metii i-poror lemesta o-irei lenye meôgur sii l-oshon i-irei, meii l-muran lo-l-osho lemesta e-irei lenye.

The warriors' shields are not all of one design; they differ.

Each age and each sub-district has its own design.

Aun ôj pe ten etumo l-muran oo-l-maôgati, neiyôitani ɔ'ɔjɔɔ ol-poror ôje, kake le-l-osho ôe.

In consequence, if the warriors meet an enemy, it is known to what age such a one belongs, and also to what sub-district.

Ilii ɔ'ɔɔi ooôgwan loo-l-lôigoi, o-irei enyokye, o o-irei enk, o o-rei le-l-oôigo, o o-irei lee-l-iguluni.

There are four markings for the shields, the red one, the black one, the ornamental one, and the one for bravery[1].

Ore ɔ'ɔjɔria oo-l-muran sepiki sii-irei ôbo; ôorioro.

Likewise with the spears, they are not all marked alike.

411 531 639 561

Ore te eloli em-ɓere, neiyôitani ɔ-l-ôgurat ol-poror ôje ol-epuy o ol-osho ôje.

If a spear is found, it can be ascertained by looking at the lower part to what age and also to what sub-district its owner belongs.

Concerning the arrows of the Masai elders.

l-emun ɔo-'m-baa oo-l-moruakloo-l-Maasaa.

The old men have special marks for their arrows as the warriors have for their spears.

Eaie l-oruak i-irei lenye ɔo-'m-baa, caa eata l-muran ɔo-'m-ɓɔria.

If an arrow is found, the generation and the sub-district to which its owner belongs can be recognised.

Ten ɔloli ɔ-baa, neiyôitani e-ôj le-l-epuy o ol-osho lenye.

[1] The Kamasia use of four colours in ornamenting their shields—white, red, black, and gray. White is obtained by mixing water with white clay; red clay mixed with the juice of the Solanum sanguinolentum, Hochst., produces the red paint; black is procured from the ashes of *Kiewa* wajiora, Vahl., or from charred potsherds and gourds; and gray, which is but rarely used, is obtained from shadows. ned by the status of seniority which is higher for the right-hand unit than for the left-hand unit. 561

To study how the seniority status of the age-units affects the structure of the age-class may be useful to our analysis.

The right-hand unit, being the first of the two-units forming a class, is senior to the left-hand unit. A class, however, is not an absolute institutionalised set of persons, but it is related to other classes below or above itself. Therefore, the two age-units of a single class must also be considered in relation to other classes.

The right-hand unit at the time of its institution has no actual relation to the left-hand unit for the latter does not exist yet, but it has relation to the class next above itself and particularly to the left-hand unit of this. [**] Such a relationship makes the right-hand unit junior to the left-hand unit of that class next above. At a later stage, when the new left-hand unit is instituted, the right-hand unit in question becomes a senior unit. The senior right-hand unit and the junior left-hand unit will finally merge into a class. Therefore, if a class is regarded as an absolute body, the right-hand unit is the senior and the left-hand unit the junior. But if the class is viewed as a related body, both the right-hand and the left-hand unit pass through a first stage of juniority, and a successive stage of seniority.

It is important to stress that in the structure of a single age-class the right-hand unit is always the senior unit and the left-hand unit is always the junior unit. 561 554

The status of seniority, as contrasted to that of juniority, is not a mere abstraction. It gives rise to some special privileges which are recorded by FOSBROOKE as follows: (1) "the marking on the shield known as *oerot oeyuki*;" (2) the spear handle of black wood called *enjata narok*; (3) the right to hold a dance without seeking permission

[**] One should note that a class is finally instituted, i. e., the two age-units merge into a new single age-set, when the first unit of the next following class has been instituted. See below on the discussion on the overlapping rhythm.

[**] According to MERKER, p. 78, there may be six marks in the coats-of-arms of Masai warriors which they paint on their shields: 1. the warrior red mark (*ne oerot'enjugi*, to which FOSBROOKE refers; 2. the black mark (*ne oerot'enki*); 3. the ornamental band; 4. the coat-of-arm of the clan; 5. the mark of leadership (*Korperabzeichen*); 6. the mark of bravery or distinction. Of all these marks the most important is the warriors' red mark (No. 1. The mark of the clan was rare in MERKER's time. The mark of bravery is reserved for the warriors who distinguish themselves in military action. The shield of the junior initiates (*il kerumi*) is poor in colour and pattern. They are allowed only the black mark; the red one is reserved for the senior initiates. [531]

FL12 Masai FL12

614 565 142 breed than others. The most aristocratic of these clans are the Ngajè-Masai, Molilian, Lyserè, and Leteyo. These have the finest physical development, and are undoubtedly superior to the others in the shape of the head, the less depressed nose, and thinner lips. Indeed,—but for the prominence of the cheek-bones, a tendency to a Mongolian shape and upward slant of the eyes, the chocolate-coloured skin, and the hair with a tendency to become frizzy—they might pass muster as very respectable and commonplace Europeans. The Ngajè-Masai are the purest breed, and are to be found chiefly around Kilimanjaro. The most degraded tribe physically is that which is known to the coast traders by the name of Wa-kwafi. They seem to have acquired a strain of negro blood, as will be perceived by an examination of the photograph of the Masai of Lykipia (p. 205). The higher development of the Ngajè-Masai is seen in the photo of an aristocratic woman of Njiri.

634 The country is divided into about ten principal districts, such as Sigirari, Njiri, Matumbato, Kapté, Dogilani, Lykipia, Guas' Ngishu, &c. The various members of the race are generally designated by their native district. Various clans [614] may be found occupying the same district, but they usually keep in distinct kraals. Hence they speak of the "El-Masai Matumbato," or El-Masai Kapté. Each district also is further distinguished by having special heraldic devices on the [714] [531] shields of the warriors, painted with wonderful skill and taste in black, white, red, or yellow colours. Between the 619 various sections of the tribe there is not the slightest cohesion. 628 Wars among themselves are of constant occurrence, though when a state of war is not declared, they are on the most friendly terms,—their feuds not being of that deep-seated character which distinguishes those of semi-civilized lands.

174 Of these internal wars none have been so disastrous or so 628 oft-repeated as that between the main mass of the Masai and the Wa-kwafi (I have use the name for convenience). The original home of the latter was the large district lying between Kilimanjaro, Ugono, and Pare on the west, and Teita and U-sambara on the east. This large region is known to the Masai as Mbarawai. Some fifty years ago the Wa-kwafi were numerous and strong, able to defend their own against all comers. About 1830—as far as I can gather—a series of misfortunes fell upon them. In a great war-raid against the Wa-gogo to the south they suffered a severe repulse, and great numbers were slaughtered. The same

276 other leaves, for example, from the banana, and thus left to ferment for several days. Then they are hung up to dry in the shade or in the hut, and, as soon as they are sufficiently dry, they are packed together in the above-mentioned packets. To make the ball tobacco, on the other hand, /35/ one lightly pounds in a mortar the fermented and dried leaves, after they have been sprinkled with water, without, however, thereby breaking up the leaves. The very moist mass is then shaped into balls, which are left to dry in the sun. The

[435] Masai pay a goatskin for two packets of about half a pound each or for ten balls. Only the old people use tobacco. The men smoke, sniff, and chew it, while the women content themselves with chewing and sniffing. The tobacco intended for smoking is coarsely cut. The tobacco pipes (Fig. 5) consist of a thin wooden tube about a foot long (ne sarian) and a conically shaped clay or

Fig. 5. (1/4)

[322] wooden bowl (el mori). The latter is carved by the Masai them-
[439] selves, whereas they buy the clay bowls. For chewing one uses

[415] [517]

Fig. 6. (1/4)

the same tobacco and chews it with a little pea-sized piece of natron salt (e magâi). To prepare the tobacco for snuff, the smoking tobacco is first cut as fine as possible and then ground to powder with a round stone in a piece of gourd shell. To this one

/35 cont./

276 adds some natron salt and beef fat, frequently also pulverized bark of *ol amore* (*Ocimum suave* Wild.), and mixes the whole by further grinding. Small boxes (*en dulet* -- *'n duleta*) made out of wood, bamboo, cattle or sheep horn, or even out of the horn of the *Rhinoceros bicornis*, which often are quite attractively carved and decorated with beads, serve as snuffboxes (Fig. 6). They are worn around the neck on this chain made out of iron wire.

Fig. 6. (1/2) Vessel for the preparation of honey beer.

273 Another luxury, also intended only for married men, is a kind of honey beer (*en alacho sanga*) (Fig. 7). One dissolves honey in water and adds a piece of the root of the *mappe* aloe, *ol ngumbi*, /36/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1)

1. Named after the resemblance of the fruit to a liver sausage.

(*ol darbil* -- *Kigelia aethiopica*), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity of the hearth fire. Before it is drunk, one often puts in a few branches of leaves from the *ol gorjet* bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete drunkenness. Other brews, which the sedentary Bagnoes bring to the kraal for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The kraal do not distinguish these with names, but rather call them generally *ol mirua*.

/36 cont./

524 Now the partner starts in the same way playing in his row. /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters are small, finger-thick, and spindle-shaped ivory sticks 15-20 centimeters long (ol-alai, ol ala) (1).

[302] [239]

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the ol gohé (ol gohée), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

415
• 531

Fig. 6. (Ivory)

When the livestock has come home from pasture, it is milked, as in the morning, and after that the evening meal, consisting of fresh milk, is taken.

/37 cont./

415 (356) The household equipment is quite paltry. Except for two or three earthen pots there is found first of all a number of gourd bottles (Fig. 9) of various sizes: for milking, the el ñiñ, el ñiñ for storing milk, the el bugut, el bugata and the larger e mala-'malada: for making butter, the en digologol: and for honey beer, the e' ñilkombon. Some have a bulging, others a slender bottle shape. They often have sewed on them longitudinal strips (531) (394) of man's leather, which are trimmed with cowrie shells (1)

1. The shell of the porcelain snail, Cypraea moneta, which even today takes the place of money in many parts of Interior Africa: on the Bizana /Wyzana/, for example, 1000 cowries have the value of two rupies, two pence (at an exchange rate of 1.40 marks) = 2.94 marks.

415 (on ñiñin), en ñiñin). To make these vessels one puts the ripened 322 and extremally hardened bottle gourds, the only place that the blood grow near their brain, and, to be sure, on piles of goat and sheep dung, either in water or to dry on the hot roof until /38/ their contents rotten, and then removes them by poking and twirling with a brush made out of a man's tail (el kidolgoik). Later, the (399) cleaning is done after daily use through rinsing with cattle urine. As the reason for this peculiar "cleaning" the women whose duty this work is say that the vessels rinsed with water soon become foul-smelling and the milk stored in them does not thicken as evenly as with the use of urine, but rather deposits a layer of water. Since, with use, the gourd bottles soon take on a scorch, disgusting odor, they are often perfumed, and, to be sure, through fumigation with twigs of the el ñiñin acacia, through which the milk too is given a taste pleasant to the blacks. /Figs. 10 and 11 appear here./

416 (394) /The skinner's dry scrotum should (ñiñ ñiñ) f ñiñin (Fig. 10) out of which one sets, from ordinary urine, while they themselves make the honey pots (el ñiñ, el ñiñ) (Fig. 11). On each (239) of the two openings of a scrotum tube approximately a foot long

/77 cont./

561 of all the age-fellows is first convened, so that they /78/ may choose
78 a delegation from their midst. To it belongs in the first rank the
speaker, then a rather large number of the strongest and handsomest
ol barnot. All are provided with rich adornment, as well as beauti-
ful weapons. Each ol barnot has brought along a lean head of
[431] cattle. The large herd formed by this is taken along by the dele-
gates as a gift for the ol oiboni. When they have been presented
their request to the mighty one, he directs them to come the next
day, when he imparts the answer by giving them, as example, the
name ol gisikon. The men circumcised during the period from 1896
to 1901 were given this one. It is supposed to meet the generation
after them weakened and impoverished by the rinderpest. After the

714

III. 38. Shield ceremony of the Siuwi.

561 delegation has been dismissed by the ol oiboni, they return to their
78 native kraals. At a gathering again held there, all leave the new
[714] warrior and then consult about the choice of a shield ceremony.

/78 cont./

These consist of curves, sectors of circles, lines and scallops, which are painted on the shield's surface in three colors, Pompeian red, black, and gray (1).

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color. /78/ serving as the background color for the shield's surface, from which the colored designs stand out in sharp contrast. One uses for this the red earth mixed with blood or with the juice expressed from the fruit of the *Solanum campylacanthum*, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black, pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle horns.

Today considerable confusion in the shield escutcheons slightly prevails. The rarer the war expeditions of the Masai become, thanks to European dominion, the more the old formalities of warfare are sloughed off, and ancient rules, which formerly were never transgressed, are today all too often ignored; their purpose has lost its meaning in the changing times.[1] A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons is not of itself interesting to have only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

A shield escutcheon (Plate I) may contain 1. the red warriorescutcheon (*ol meer' enjugi*), 2. the black escutcheon (*ol meer' enjiki*) (1),

1. To which the rare gray also belongs.

3. the armament band (*ol mpiro i ol ebu*), 4. the escutcheon of the lineage, 5. the cognisance of the warriors, and, finally, 6. an emblem

1. [i.e., the shield escutcheons--Kmaiyet]
2. [See pp. 606-607--Kmaiyet]

/79 cont./

714 which only the brave are entitled to wear, the *ee mwoo* / *ei kipiong*.
• 531 A shield emblem is complete if, in addition to the ornamental band, it also contains the red warrior-emblem.

The ornamental band is the stripe painted in the longitudinal diameter of the shield. Actually *ee mwoo* is the name of the cowrie shells that, sewed on leather strips, adorn the guard bottles. The similarity of such an ornamental band with the longitudinal stripe on the surface of the shield explains the blood word used for this and my translation as ornamental band. The drawing of the ornamental band is unimportant and is often subject to the taste of the carver. Considerable differences exist both between the provinces and within the individual area.

714 The most important emblem on the shield of the warriors is the
531 red warrior-emblem. Three forms of it are distinguished: the
634 double wedge (Plate 1: Figs. 2, 4, 6, 8, 13, 14, 15, 17) along the
184 ornamental band belongs to Kiwaiga Province, the segments of circles (Plate 1: Figs. 5, 7, 10, 18) on the ornamental band are the emblem for Laiba Province, and the peripheral emblem (Plate 1: Figs. 11, 12, 16) shows that the bearer of such a shield belongs to Ci Bragga Province. The warrior emblem is either on both halves of the shield or only on one: the former is the rule in Ci Bragga and Laiba, the latter /is/ in Kiwaiga. Laiba and Kiwaiga, however, show more exceptions. If the red emblem is painted on both halves of the shield, the one half shows the mirror image of the other, so that a symmetrical double emblem results, the center line of which is formed by the ornamental band. According to my explanations, this seems to have been the fashion especially after heavy-risk war expeditions. On the other hand, where the red emblem is found on only one side, the other half of the shield shows one or two large, black, bow-shaped emblems (Plate 1: Figs. 3, 9, 5, 11, 12, 17, 18). These are commonly
714 found in Kiwaiga, where they have been customary for as long as the
531 memory of the people extends. *They are never in Laiba* /Ill. 39 ap-
634 *pears here*/ and, to be sure, really only show the death of Mbwyea.
184 Mbwyea resides in Kiwaiga, and his bodyguard consisted of Kiwaiga
714 warriors. After his death Zambe put together a guard made up of
741 Laiba warriors and also stayed largely in Laiba in order to avoid the

Fig. 39. Shield escutcheons of the Ishmi.

[illegible] influence of the Ishmi military caste heroes. The answer to the question concerning the meaning of the black bows was almost always merely that they probably served as ornamentation, since, with the application of the warrior emblem on the one side, the other half of the shield would look unattractively empty, and only a few old men opined that it was originally a lisenga emblem of the Ba gbaal. This conception seems to me the right one, and it would explain why the emblem /[illegible]/ has been commonly used in Kisenga from time immemorial and does also seem to lapse after Mbayere's death.

[illegible] The lisenga emblem is almost never found on the shields of [illegible]; thus I did not come across it until I had down by a number of old men the shield escutcheons carried by them in their youth. The illustrations of Plate [illegible] show a collection of lisenga emblems. We see there that the emblem is sometimes applied on the front of the shield emblem, sometimes on the back of the shield. While the warrior emblems have remained the same for a long time, the lisenga emblems were always quite variable, and it seems that each age class made up its own.

[illegible] [See p. [illegible]]

/[illegible]/

The illustrations give the lineage emblems that the members of the [illegible] age class carried before the livestock epidemics around the year 1880. It furthermore seems that even in the times in which the carrying of lineage emblems was customary they were not generally carried by all lineages, but only by those whose members predominated in number in the part of the country concerned. The practical utility of this mode of procedure was to keep constantly before the eyes of members of other lineages the fact that these lineages were particularly strong and that therefore the individual belonging to them was entitled to a larger share of the spoils, in accordance with the principle: might comes before right. The emblem of such a lineage was then also sometimes adopted by all the members of that part of the country.

These warriors who take the lead in battle, the [illegible], have the right to carry the emblem of bravery on their shields. This is the small colored emblem that is on the periphery of a longitudinal side and is to be found in Figures 9, 10, 15, 16, and 17 of Plate 1. It is still commonly used today.

The law emblem that may be included in the shield ensembles is the one mentioned above as the section emblem. By section is to be understood here one of the many small divisions out of which the camp of a camp found on a war expedition is made up. In accordance with its secondary significance, the emblem is not very striking to the eye. A comparison of Illustrations 11 and 15, Plate 1, shows an example. These represent the ensembles of two shields whose owner belonged to one company and within it to different sections.

It is also to be mentioned that both the shield ensembles as a whole and its individual constituent parts were probably always dependent on fashion and other circumstances of the moment. Sometimes simplicity was favored, sometimes gaudiness. Sometimes a close feeling of connectedness prevented the carrying of the clan-forming lineage emblem, sometimes mortal discord involving grounds of penal law or civil law called forth the opposite. The above-mentioned shield percentage of old men proved to us that the shield ensembles of a province were uniform during periods of successful warfare. On the other hand, /[illegible]/ one can observe almost daily on the blood enemy that

/NE comp./
nowadays the warriors, out of boastfulness, go on using shields, with unshaved escutcheons, taken as booty in battle with Nagwos (1)

1. The fact that Nagwos also carry shields of the Maasai type, and, to be sure, with similar escutcheons, is a consequence of the above-mentioned association.

or half-breeds of Nagwos and members or bearers of the Maasai people or, with the present discord, even those of other Maasai.

The shields of the el barnot, the recruits, do not appear so gaily coloured (Plate 1: Figs. 1 and 2). As soon as the youths have received the shields, they ask the most renowned of the married men, a former speaker of the warriors, for his consent that they be permitted to paint a black emblem on the surface of the shield. At the time he gives his permission, he also determines the form of the emblem, that is, he does not invent a new one, but chooses one from among the old familiar ones. With this and with an ornamental band only drawn in

Sh. 30. Shield escutcheons of young warriors.

/82 cont./

714 black, the youths then paint their shields. The red color may appear
701 in the ornamental band only with the carrying of the large red emblem.
• 531 They carry the black emblem and the ornamental band until they
561 have become the equals of the warriors and are able, by their ability,
to obtain the red emblem by obstinacy or force, for the warriors,
of their own accord, will not let a younger age class carry those
emblems. Therefore, when the youths feel strong enough, they com-
plete their shield escutcheon in the aforesaid way and then carry it
714 /83/ ostentatiously for show. The warriors see it, become angry,
701 and scold. The el barnot, for whom the warriors have until then
531 been persons of respect, answer saucily and impudently and scoff
561 that the warriors have now become old and weak and neither need
578 nor deserve the red emblem any longer. No one likes to be reminded
of his shortcomings, and a Masai least of all tolerates the reproach --
for that is what it is for the one still in the warrior association --
of incompetence in war, especially if it is hurled at him in street-
urchin fashion out of the taunting mouth of a younger person. At the
[591] same time the youths build a circular barricade of branches and move
in, possibly even before it is filled with huts -- a further provocation
of the warriors, for with that the el barnot declare that they too now
have a right to their own warrior kraal and are no longer to be re-
garded as recruits, but as full-fledged soldiers. The consequence of
this is that during one of the following nights the warriors attack the
growing kraal in order to make the point clear to the el barnot with
force. If the latter are defeated, nothing remains for them for the
time being but to scratch the red emblem from their shields again with
[721] all haste. They give vent to their anger over their defeat by scolding
and by one or two small raids against Negro tribes. Sometimes the
701 warriors then acknowledge them as equals, especially if the raids have
561 brought rich spoils, but often too they must force their recognition as
[531] before. If this succeeds, they may now also carry the red emblem and
[714] are henceforth regarded as true warriors. They continue to build the
kraal that was started and live beside the other warriors, but go to
war with them. Usually, however, this situation does not last long;
rather, the old warriors soon quit the service and marry. It is there-
fore an exception if there are two warrior kraals in one region at the
same time.

411 /151 cont./ The
[237] beautifully worked waistbeat (sk ciwchik, A ciwchik) (Fig. 31 c and
[236] 32)) is made from guenika or deer's hide and dyed with the red juice
[124] of the root of the shrub of ceanothus (ceanothus) (1):

3. Frontage ceremonies.

on the back side is found a longitudinal middle seam and on the front side a corresponding longitudinal fold. Twelve centimeters from the upper edge /152/ of the waistbeat there sits on the front side an oblong eyelet (sl chuk, sl ciwchik) through which the belt (sk ghuki, A ghuki) (Fig. 32 b)) were around the hips is
[124] stuck. The latter is made of deer's skin and decorated with several
[125] longitudinal folds. There is a hole (sk sukuc, A sukuc) at one end, and at the other one a small leather strap (sky ciw, Ay ciw). The sword is worn on the right side and drawn with the right hand. Left-handed men wear it on the left side. This carrying method seems
[174] to point to the fact that formerly the people did not carry swords, but daggers, for a sword can be drawn with the right hand better from the left side, whereas a dagger is more quickly ready for a thrust from the right. Moreover, the sword, even today, is also frequently handled like a dagger.

714 According to the tradition of the people, the original kiowa
171 shields were very small (shield = sl ohch). They had a circular, flat
[173] shape, a round umbo in the center, and a diameter of 30 centimeters. The grip stick was fastened on the back side with small straps, which were drawn through the shield. The very light shield was carried with two fingers at the grip stick. Accordingly, the hollow of the umbo was very small. Gradually the shields became larger, and the reason for this may be sought in the frequent conflicts of the kiowa with peoples carrying bows and arrows. Since in its original shape, the shield, with its enlargement, lost firmness, this was increased in that a wooden frame (sl dawuk, sl dawkc) was sewed around the outer periphery
[237] with strips of goat or deer skin. The shield was bulged out, and, to preserve the longitudinal convexity, two straps (s ruchuc)

/110 cont./

714 were drawn from each end of the grip stick to the grip (Pl. 34). The
178 present-day shields, like the former ones, are also made out of buf-
[247] falo or giraffe skins. For better protection of the hand, the umbo is
lined with a round patch of the same skin, and, on top of that, in
order to prevent the chafing of the finger knuckles, with a piece of
soft sheepskin. The shields now in use, measured with the convexity,
• [531] are 1-1.10 meters long and half as wide. The escutcheon is painted
[415] on the front surface of the shield, whereas the reverse side often --
not always -- bears the lineage coat of arms.

714 On the march the warrior carries the spear with one hand, the
411 shield in the other one. With arm hanging down, the hand grasps
482 the shield grip so that the smaller diameter of the shield is vertical
and the painted surface is turned outward.

The club (si ghoda, si ghod [Pl. 35]) is now made out of
411 one piece, generally out of ordinary hard wood, especially from the
[219] tree of sirish and of silmalwank (1):
[247]

1. Dengan rakiranda E. Sch.

only the clubs of the speakers, which serve solely for gesticulating,
411 are made out of ebony wood or rhinoceros horn. The old clubs /110/
178 consisted of two parts: the spherical head, into which the sirhilla
handle was stuck through a central hand-hole. The club does not
[512] actually serve as a weapon of war except for accompanying a speech,
it is used almost exclusively in fights and -- to hack narrow bones
of slaughtered livestock. The present clubs are about 40 centimeters
411 long,--their head has a diameter of five to six centimeters. A clubhilla
[214] ranjal (or sirh), especially one of the wood of sil galaniar (1).

1. Ochna kirkiana Gilg.

often takes the place of the club. The club is worn in the sword
belt; it sticks in it as a rule close to the sword, with the hand upward.

/127 cont./

291 married men wear a similarly cut, but considerably longer cape, which is called [illegible] and usually, but not always, is embroidered. For protection against the often damp cold, especially in the rainy season, the warrior wears no other article of clothing, but, while sitting, simply draws the cape also over the left shoulder and — the man. The [illegible] is made by a sister or the favorite girl of the [illegible]. The clothing of the women is not quite so simple, but also is certainly not luxurious. It consists of two large leather aprons made out of specially sewed together. The lower one (al [illegible], al [illegible]) is put around the hips and stuck fast by means of a curled-in corner, or held fast with a leather belt (al [illegible], a [illegible]) embroidered in a zigzag pattern with colored beads. The other, upper one (al [illegible], al [illegible]) is hanged on the right shoulder and /128/ leaves the left shoulder and left breast free. The upper garment is rarely decorated with a few beads, the lower one almost always. Most common is a row of small colored beads running around the lower edge; often on the lowered patches have beads sewed around them. Old men and fatherless boys and girls during the healing of the circumcision wounds wear an apron that has the same form as the upper garment of the women, but a considerably greater length. It is called al [illegible] (al [illegible]) and, depending on its owner, is designated as al [illegible] (al [illegible]), al [illegible] (a [illegible]), al [illegible] (al [illegible]). Among the men it is hanged on hip and shoulder on the right side, among the girls /12[illegible] as appears here/ fastened under the arms with a strap and around the hips with a belt, whereas by the ac [illegible] it is nearly slung around the body [illegible].

The sandal (Fig. 59) is in ceremony shape (as [illegible]), a [illegible] form the footwear for all without distinction as to sex and age. It is made from the thick back-skin of the bulls.

301 As among all primitive peoples, the richness of the ornamentation stand in contrast to the simple clothing. This is most manifold among the warriors and the young women.

/141 cont./

In order to make the ears suitable for holding ornaments, their lobes are pierced in early childhood with a strong acacia thorn and dilated by the insertion of longer and longer wooden plugs. The plugs (Pgs. 42 a and b) are mostly made out of the wood of the ni gulandar tree (Cordia Sinensis Gilg), often quite beautifully marked. The weight of the ornaments enlarges the holes still more, so that they often hang down extended ten centimeters. At the same time the upper edge of the ear is also pierced in one or two places. In these the women wear bunches of four to eight small chains to 30 centimeters long (Pg. 44); the men wear just as many ni ziniki (sing. ni ziniki), a clerk-key-shaped ornament made out of tin (Pgs. 45 a and c) or out of brass wire (Pg. 45 b), often also a pass on a wire ring, a polished enamel shell, which ornament /142/ is called ni [illegible] (Pg. 46), or a wooden stick 15 centimeters long (ni bamik, ni bamika [Pg. 47, upper part]), or a quill of the porcupine (ninini or ufu, Hystrix africae-australis). Around the lower part of the enlarged ring of ring of the ear lobe the men wear a tube four centimeters long (ni gimi, ni gimi [Pg. 47]), wound out of thin iron wire. /Pgs. 47-51 appear here/ whose end coils are wrapped with copper wire, while on the rest of the coils usually hang small chains 6 to 30 centimeters long (ni bimi, ni bimi). If these are only short, they are as a rule glued together with red paint (Pg. 48). In place of this ornament one also often sees an oval, perforated tin disk (ni gulandi, i gulandi) and other things, or a nut-shaped ornament that /143/ is carved out of the nut of the Hyphaene palm (Pg. 49). Married women and old men wear, tied to the ear lobes with a thin strap, the large double spirals (e [illegible], [illegible]) made out of thick brass wire. They are supported by a leather strap put over the crown of the head, since, because of their great weight, the ear lobe is unable to do so. It is regarded as particularly beautiful if they are further decorated with a leather band sewed across them and winched with four rows of small beads, on which hangs a row of small chains. This decoration, which, incidentally, is found only among women, is called ni [illegible]. For dancing, young girls often wear a string of beads (Pg. 51) around the forehead and occiput, or two strings of beads lying one above the other on each upper (Pg. 51), which are joined, intermitten, with small chains. The ornament is called ni [illegible].

TEXT CONTINUED ON PAGE 137

/344 cont./

301 [illegible], at [illegible], oblong, bean-shaped white beads (ni [illegible]), date-pit-shaped, multicolored figured beads (ni [illegible]), ring-shaped blue and green beads (ni [illegible], i [illegible]), and various wire rings. The beads are either strung on wire and cord twisted out of cattle tendons, or also sewed on narrower or wider, flat leather rings.

• [234] In the latter case the beads are arranged, according to color, in rectilinear, mostly square designs (Fig. 53). Such a bead band is

[237] called a [illegible]. The middle piece of each circlets, lying on the chest, often consists of a later sized piece of well dull ground flat (ni [illegible], at [illegible]), on the beaded border of which hangs a row of small chains (Fig. 54). With this material consisting of beads, wire, and leather circlets the most varied and all conceivable combinations are formed, which everyone designates by the part of a man compromises to him, so that there is no fixed nomenclature for them. Special mention should be made of a string of beads regarded as particularly beautiful and chic for young women, in which six bare beads alternate with rows of small glass beads and spirals of brass wire two or three inches long and which is worn headband-like over the left side of the chest.

301 As a war ornament the at [illegible] often wear a set of dewl, a
237 cross between a cape and a ruff, consisting of vulture feathers. The ornament is called at [illegible] or at [illegible]-the vulture; each individual cord on which the feathers are strung is called at [illegible].

Besides a simple bead ring, a leather band stitched with beads (ni [illegible], at [illegible]) or an ivory ring (ni [illegible], at [illegible]), the men, especially the warriors, often wear on the left upper arm a bracelet of sharp bars in the form of a double chopping-knife (a [illegible] a [illegible]) (Fig. 55).

[234] If one goes to a festival or goes to war there hangs on it a saber-bag, colored sky (ni [illegible], at [illegible]) made out of the skin of leopard, Indian leopard, serval, jackal, furbearers of the genus (ni [illegible], Genetta pardina), and (ni [illegible] [illegible]/ [illegible]), white mongoose (ni [illegible], Crossarchus fasciatus), raw rawhide (ni [illegible] or [illegible], Dendrohyrax arboreus), and of a squirrel-like animal (ni [illegible] or [illegible] - [illegible]-[illegible] the blood generally adorns that is worn on the sides of the gun or sight), the

302 714 temples, whereupon the tips of the strands are wrapped with hair to the length of an inch. The back hair, lengthened up to 50 centimeters, is placed around a four-long stick and on this wrapped tightly with hair or goat leather wraped thin, so that it forms a stiff braid (al dejar) reaching to the waist. Over this braid one not infrequently finds one to three smaller ones. Often the tips of the little temple braids (sing. al bebedo; al baked | ab gaeche) are joined with that of the longer forehead braid (al bebedo | ab gaeche) and the former tied together under the chin with a string (made of fibers) (3).

[321]

[951]

1. This hair style has the purpose of preserving the head from the harmful influences of the sun's rays. For this, one first let the hair grow long and, since the long strands fall annoyingly into the face at every movement, put it together into "braids." The Tonga helped themselves more simply, in that they shaved the front part of the head and left the protection of the thick padding of hair on the back part of the head.

[971]

302 [224] The hair is often perfumed with the sweet powder of al ib bibedel (Cassia spec.). /140/ /Sin. 40 and 50 appear here./

/140/ The white facial painting of the newly circumcised has already been mentioned. Younger people, especially women and young girls, on all festive occasions, render the entire body tender so it is not clothed, with red paint, which they like to perfume with the pulverized leaves of al ongongeldi (Cassia aspectiflia Sch.), which smell like vanilla. With one finger the women then often strip it off the skin house in separation from al bigaadin, al bigaadi; so that a kind of drawing is produced. One who has killed an enemy in war paints his body or the following days festivals with white and red earth in stripes (Fig. 47). This painting is called ag /Figs. 47-48 appear here/ gindigam. At festivals one also often sees on the face of the warriors a red triangle, its apex starting at the eye and widening out up to the middle of the cheek (Fig. 48). When boys

[illegible] interest to and under the dong is to whether to a part time and virtually impossible to get out.

[illegible] Dwell also sometimes abandon a home or at least the house involved, if a person dies in it. [illegible] People who are very seriously ill are removed from the home at least during the day, often to a small there home with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a home is very likely to sell up [illegible] a hyena. The administration frowns on this [illegible] and consequently the Dwell have become reticent to talk about it. The sick persons' house that we saw looked to have been occupied nights as well as days.

[illegible] Death Traditionally the Dwell are reported to worship entirely on blood and milk (Gaudier, 1960). In Western Dwellland the Dwell also consume of goats (native goat), milk, meat, and occasionally blood. The [illegible] and ceremonial goats are killed by the women and young girls. The milk is collected in large calabashes. These calabashes, often colored and sometimes elaborately decorated with beads, are placed as much a symbol of the Dwell as the white blankets or cloaks, dance spears and [illegible] rights.

every opportunity. These the purpose is potentially to clear one grazing land. During the 28 months of our major study period, we were in sight of the Bao forest (at the foot of the Bao Escarpment) at least twice a month, often in the valley, and only once did we not see smoke from a fire burning in the trees or brush.

Relations with Wildlife

The most significant influence the Bosal have exerted upon the wildlife in their protection through excluding hunting within Bao Bosalland. The Kanzaeke are an exception, but there are relatively so few Kanzaeke that they have little effect. The areas of East Africa where the fiercest encounters of pressland wildlife still occur are there in Bosalland.

The wildlife Bosal hunt or have hunted include buffalo for steaks and possibly food, eland for food and the occasional bull kudu for horns. [illegible] and [illegible] are valuable for trophies and [illegible] according to Willett, 1980). Lions and [illegible] leopard for defense and for lion manes, and elephants for horns and to spite national park authorities (particularly in the past decade). In times of drought the Bosal may spear various animals for defense as to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

not convert: they must wait until the medicine-man tells them that the event is about to happen.

If the medicine-man is going to prophesy by means of the buffalo or an horn, and there are people on the road, he tells those present that he will wait, as their feet will spoil his prophecy. They always know when people are coming, even if they are afar off.

When a medicine-man makes medicine, he gets drunk before he prophesies. He sings in parables, and the people reply.

For instance, when the medicine-man named The father of Kipepe made medicine for the warriors of Kilepo before they went on a raiding expedition, he sang:

'The bulls that cannot move because they are so fat,
They will be beaten by Kilepo.
The bulls that cannot move because they are so fat,
Half of them have been captured.'

The warriors of Kilepo went on their projected raid against the people of Kaba[1], and captured half of their cattle.

They said: 'Thou prophesied the medicine-man.'

All medicine-men belong to the Kidongi family of the Aimer clan, and they are the descendants of Ol-Oimonja or of E-Ilgirisiki[2], the sons of Ol-le-Mwaiya[3].

S: Bernardi E, M-4 (no date) 1993 FL.12 Wawa: FL.12

Throughout we infer that the function of the age-unit is primarily social. Its scope is to organize the initiates into a corporate body, separate and distinct from other similar bodies, and to lead them, both as individuals and as a corporate whole, towards a full social and economic independence and towards taking a full share in political life.[*] [542]

12 – THE CEREMONIES FOR THE INSTITUTION OF THE AGE-CLASS

The institution of the age class is brought about by the performance of some special ceremonies, of which the most important is the spear project. Before this takes place, other ceremonies, such as "the slaughtering of the ox with jousting" (*ol gaua l ol kwa*), "the spear of milk" and "the spear of meat", must be performed by every initiate. Through these performances the initiate obtains the status of an elder. The second is the forerunner of all his age-mates. As was seen, at Uwin, he is given the status of an elder, and soon after that he settles down as a married man. [541] [542]

Leakey,[**] states that a warrior (i. e. an initiate) who marries cannot have sexual intercourse with his initiated wife.[**] Fox,[**] qualifies Leakey's statement and says that such a case "is hypothetical, and does not occur in practice", because usually the senior initiates marry after the spear of milk.

Kenyatta,[**] is our only authority for "the slaughtering of the ox with jousting". The ceremony consists in a meat festival offered by the candidate to the elders of the neighbourhood of his father's village. Other initiates share the meat, but are apart being still under the restrictions of junior initiates. A mock fight follows in which the initiates and women take part. Finally before the sun sets, "a married man with his chief wife come near to their hut and addresses him with the following words": [539]

[*] Each unit seems to be distinguished from the other by the peculiar songs. Fox, l. c., p. 434, states that almost all of these songs are in a "rather cryptic language". [533]

[**] Leakey, l. c., p. 586.

[**] Leakey was somehow misled in his information; he also states l. c., p. 196, that "the actual transfer from the senior warrior stage to the Elder's stage takes place without any ceremonial", which is not correct. [114]

[**] Fox, l. c., p. 433.

[**] Kenyatta, l. c., pp. 148 ss.

FILE Sheet FILE

opened a vein and drank the blood fresh from the animal. This proceeding of our wanderer young friends was a wise though repulsive one, as the blood thus drunk provided the salts so necessary to the human economy; for the blood is but partaken of any salt in its common form. This sanitary draught concluded, they proceeded to grope themselves on the fresh, eating from morning till night—and keeping their sock steadily at work. The half-dozen men were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to secure the milk-pail.

If they lived an ascetic life in the matter of food, they could not be said to do so in other ways. Life in the warriors' kraal, as may easily be conceived, was prodigious in a remarkable degree. They may, indeed, be described as a colony of free lovers. Curiously enough the "sweetheart" system was largely in vogue, though no one confined his or her affections to one only. Each girl, in fact, had several sweethearts, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Dibis and Ki-mores, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

Till a war-raid was planned, Moran, our interesting protégé, found he had nothing to do but make acquaintance and amuse himself with the girls. His cattle were looked after by some poor mortals, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no leave for pastoralists was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his minds by the peculiar mode of dancing described in the Tswana chapter. Unlike negro tribes, they led what might be called a serious life. They had no rollicking fun, no moonlight dancing, no lively songs, no thundering drums. No musical instrument whatsoever enlivened the Masai life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything locked up in silence.

Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Laiyoni* and a *Laiyonani*.

Prior to the month *Il Kyiaber* the men meet out meet in the forest or bush. They build a small round enclosure, called *Il Pul*, of thorns with one entrance about 3 ft. 6 ins. high through which one must crawl. Here they store the meat, and sleep. They may eat the meat either within or without the *Il Pul*. There is a picture of an *Il Pul* opposite p. 380 in Sidle.

The meat is pierced by a wooden spit about 18 ins. long. This is made to the ground by the fire and the meat is roasted. Soup is also made of fat and water and the bark of *Il Kidiomo* or *Il Kiborti* trees. The decoction of these barks makes the warriors drunk. They also smoke to this same the native tobacco the pipe which they frequently fall when smoked. I was unable for the *Il Kidiomo*, small doses of which do, in fact, produce a fierce and unbalanced state of mind. I have never tried the *Il Kiborti*.

When the warriors sleep in an *Il Pul* they pray to God at sunrise on behalf of their age-group. Each one takes his shower and rubs it in the ashes of the fire in the *Il Pul*. He then goes out of the entrance and strikes the side of it and walks towards the East smiling his prayer and striking trees with the shower. While performing he sings the war song *Eng-ipulunu* of his age-group. As he re-enters the *Il Pul* he thrusts the shower into the thorns at the entrance on his right and leaves it there. There are usually always a bundle of showers to be seen in this position.

The prayer is as follows :—

"*Ne Ai ainomoro ainkulunu ainenkiliro ainkiliro ainkulunu kanu kanuar il ngarai il Inghanga. Ne ipo Eng Ai ainomoro inipiki ipuak inipiki nanuaj'anuj'anuj. Ene ipo Eng Ai nanuja Ne Ai inimpiki ipuak il pauw nun il kile. Ene ipo Eng Ai nanuja inipiki ipuak nanuar il ngarai il Inghang ainkulunu il ninnipuak nainpanu kulilunu ninnipuak nanuar il ngarai il Inghang. Ainomoro Ne Ai nanu ai ungulang nanipu l'il ainkilu inupuu ipuak il ual-ninnipuak.*"

Here is the translation :—

"O God I have prayed Thou having some cut kidney with my garment unfurnished. Thy (warriors) have come out here, let not wild beasts hurt my head. And Thou O God I have prayed give us the cattle which prosper steadily. And Thou O God I have prayed bind together for us the age-group in one garment. And I have said to Thee O God let not the wild beasts hurt the heads of the fortunate ones who have come out here and let them not hurt the heads of other fortunate ones who come from far away. I have prayed Thee God, my beloved, when the sun rises from the valley, strike them us with the rays which are lucky."

Each age-group has a different song. The song of the *Il Kinyi* is "*Tanganaki ipuak l'alunu inuno nakere inimnaio a nanni nanaiti al nanni la nagat ainki.*" I cannot translate it because, like other Masai songs, it is couched in rather cryptic language.

/[illegible]/

For the most part an atmosphere of fullness and harmony lies over the head of the married [illegible] of [illegible]. Only on rare occasions /[illegible]/ do the women cause disturbances with song, especially if a few [illegible] are there on a visit and give the impetus for the gaiety. Women and [illegible] dance in separate groups. For dancing the women [illegible] themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The rest of the accompanying song naturally refers to the life prevailing here.

Otherwise quiet prevails in the family house after darkness has set in. In good weather the people sit in a while in front of the hut, silently or softly conversing, and go to rest slowly at 8:00 o'clock or 9:00.

Even 10-14 years ago, before the island had their huge livestock-buildings in two great epidemics, each family had its own hearth; now, on the other hand, almost everywhere several families live together.

In the morning life begins around 4:00 o'clock, at which time the women fetch the calves from the compartments and take them to the cows, where they remain for the driving out to pasture. At daybreak the milking ceremonies, for which all the women appear. After it is finished, breakfast, consisting of fresh milk, is taken. Milk, soups, and this porridge are drunk from gourd bottles; lumps of coarse consistency are put in the mouth with the fingers. Meat is partially cut up with a knife and completely torn into bits with the teeth. The hands are not washed before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the men wishes to eat in the hut, the women has to leave it beforehand.

/[illegible]/

the ground. The father always carries the child on his arm, but only picks it up now and then /[illegible]/ for a moment. As soon as the child cries, even at night, the mother, or in her absence another woman, gives it the breast. If this does not help, one tries to quiet the little one or lull it to sleep by rocking it in the arms or by singing. One such familiar lullaby is the following: ah, [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] in free translation: Oh, you my little [illegible], I say to you, grow and become big in my big [illegible].

Fig. 11. Ideal woman with child on her back.

Another song, which, like most songs, first originated during the singing and refers to recent events, runs roughly: "When then do these El molelyan were here (two women belonging to the tribe of the El molelyan were standing nearby), they who did not bring the women to childbed (that is, in this case, the woman singing the song) anything to eat? The molelyan are fools because they are not pleased about the children. In the future the woman in childbed will have to sit down in the shade in order not to feel so hungry, or she will /[illegible]/ have to ask for food in the hovel of a warrior who brought home booty from a war against the El dorse." In the last words there is another insulter as the location of one of the two El molelyan women, along with other warriors, had been recently driven back by the El

1. The [illegible] give this name to the inhabitants of the Kiangsu area on the northern end of Lake Taihu.

[illegible] an attempted [illegible] cast.

[illegible] The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Seeing the rare or blows on the head are generally forbidden because they might injure the health. If correction is necessary, the mother — and, to be sure, only the — strikes the child rather lightly on the retaining surface with the back that she wears after each confinement.

[illegible] As soon as the children are weaned, they are left to themselves the whole day and, appear to the outsiders but only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty. If their faces are not marred by running eyes. The latter is very common. In the countless flies in the towns prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence. If one pictures the life that surrounds them. There is a time, however, when they still enjoy natural and innocent diversions with childish games. Little girls like to play with dolls or also "cooking." A four-long fruit of the Trapella sinensis, similar to a long sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held on the breast, then washed with water or earth, in place of fat, or, with the assumption that it is crying, carried in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the nearby hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing small barrels two stones. With the fruits of the Sabrosa [illegible] they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

[illegible]

[illegible] Whenever the twelve company sits down in a circle under a dark tree in the vicinity of the kraal, half of it made up of the men and the other half of women. The infant to be baptized sits on the lap of its mother, who, along with the other women, is still deliberating over the choice of a name. A neighbor suggests that they should name the boy [illegible], that is, the dust one, because he is still quite dusty for his age, whereon another reminds them of the joy that the mother had when she found an ostrich egg on the steppe a few days before her delivery, and opines that they might give the little one the same Hottentot (Dam [illegible]) = the egg). After the women have been chatting back and forth in this manner for a while, said laughter, an older brother of the woman (3)

> 1. That it is he who does this, and yet the Hottentot, is probably to be understood as a survival from matriarchal times, and likewise that the mother, not the father, gives the first name.

gets up and asks her what the child should now be called. The mentions the name (2) Magiatho = cattle owner (5).

> 1. Obscure to this meaning: the name (2) Magiatho was means that he knows, for the price of a herd of cattle, had his freedom purchased from the slave state into which he had fallen as a result of a cattle epidemic and famine.

which the old man immediately announces to the gathering, whereupon the latter give a cheer for the "baptized" infant and cry out "[illegible] (acquire cattle and small livestock). Then the mother hangs a chain of large and small beads [illegible] [illegible] [illegible] around the little one's neck. Now the entire company stands up and moves in single file toward the entrance of the kraal. There in the thorny branches that are piled into the entrance at night to shut up the kraal. They are fanned around with them.

[illegible]

[illegible]

[illegible] dancing steps, vibrantly, singing, & is prayed to 'Dig ni' that he may let the boy become big and [illegible] make a strong warrior out of him, one who will capture much livestock and then in old age may own a kraal as large as this one is here; then the people enter the kraal where the men again apply themselves to finishing the honey beer, while the women occupy themselves with dancing, for which they sing with skill various songs of praise and prayer for 'Dig ni'. The success of a festival is judged by the degree that the men's intoxication and the women's giddy reach at the end of it. Soon after the first name-giving, the second follows, at which the boy receives a name from his father, by which only the latter calls him. Above newly

C. G. Schillings photo.

Fig. 16. Dancing women.

953 a small festival is also celebrated here. The most important name-giving does not take place until the child can walk. On this occasion the boy receives the name that he bears as his principal name for his whole life, and, to be sure, an elder brother of the mother or,

/[illegible]/

[illegible] ceremonies for the next circumcision period. These chosen for this, as the site of the festival, a recently built family kraal, which is then designated as *ulu ul'a ulwage* (village) *ulaki*. Decked out with a costume in imitation of the ancients, but without weapons and, of course, a long stick in the right hand, the boys secure themselves with dance and song in the vicinity of the kraal. When they crowd into the kraal after the five days, in order to endorse their purified throats with milk, they are /[illegible]/ sprinkled with honey beer by an old man standing at the entrance and congratulated with the words: *ngi dakelile, ngi dawe ilifu, ngi dale lwelize*, that is, roughly: may you become ever more numerous, more or rich, and bring prosperity to the country. During the festival the boys choose a spokesman or speaker (*ul ingomanti*) from their midst, whose task is to make them to remarkably and sage speech. When the festival has lasted two days, the boys move into the various neighboring areas in order to repeat it there. In this way an *ul gulile* often lasts a month. It is also to be mentioned that very many women appear at these festivals, and especially all who have up to date mentioned heroes. The former appear to pay no mention of the circumcising boys, to pay no compliment of the heroes men, and the latter for their part come in order to have themselves petted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a conviction prevailing generally among the kraal. In each of the following four to five circumcision years (*i ul mahlangali*) a similar festival is celebrated. It should be mentioned further that the cattle whose meat is used to feed the participants at the *ul gulile* festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival:

A few weeks beforehand are already seen the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the warriors. On the day before the operation the boy's head is shaved, and the hair is thrown under the bed of the children in the maternal hut. The boy takes off his skin cape and ornaments and dresses himself

[illegible] /[illegible]/

[illegible] complete seclusion. The one now scanned had she owned /[illegible]/ to regale guests with in her day, but no one came to him whom she deemed himself to be a [illegible]. While the old people, so long as there is something to eat and drink, are only interested in them, the warriors, already early in the afternoon, start to dance and sing with the young girls and secure themselves in this way into the night. One until about six o'clock in the day go back to their kraal, to which the girls presently follow them, after they have begged for a little more milk, which they take along to their lovers. /[illegible] [illegible] [illegible]/

[illegible] The circumcised boys, soon after the completed operation, went into the hut of their mothers and stayed there for seven days, until a superficial healing of the wound has taken place. In order to hasten this, they are particularly well cared for and are given only milk, blood, and meat. During the following period, until complete healing, they come to small huts with two and some — they do not use the ordinary huts, but some only about half as long, made only for this occasion. The crown used with them have a one hall on the top — through wooden /[illegible]/ out huts, in order to dance small birds, the skins of which they bring by the hands on a cord, which they place garland-like around forehead and occiput. Between the bird skins the so [illegible] (ring, or shell) — as the newly circumcised men are called during their occupation — stick as switch feather on each side of their heads and paint their faces with white clay (or [illegible]). On the first day they go out, they slaughter a white goat-buck on the doppe. After they have roasted and eaten to meat, they throw the gnawed bones into the fire. This meal is called [illegible] / [illegible] (or [illegible] = the goat buck, [illegible] means the one with whose branches they make the fire). Every evening after their excursions they return to the kraal and to the hut of their mothers.

[illegible] As soon as the young girl, who until then has lived in the warrior kraal in the most unrestricted freedom, concludes her certain

/[illegible]/

[illegible] dance. The one of girls moves forward up to the overture with dance, swinging arms, bending their knees and swaying their upper bodies. As a rule the dance ends when each girl chose lover to choose approaches one of the dancing overture in dust high jumps. This is an invitation to a rendezvous, which the one concerned answers by similar leaping as a sign of consent. The dance is always accompanied by singing. Shortly before sunset all return to the kraal.

Ill. 34. Dance in the overture bowl (I).

Soon afterwards the livestock return home, and, after it is milked, the people take the evening meal (or [illegible] o [illegible]) o food in the evening, again consisting of milk. After that the dancing of overture and girls begins anew on a small open place in the kraal, close to the entrance, and is interrupted only from time to time in order to [illegible] with with the dances danced by. During this time the [illegible] are still busy with the livestock. It takes quite a while

/[illegible]/

proved by the fact that they prepare the ground plan of the hole, the color splash and wire stage setting for ceremonies, etc., without mechanical measuring devices. For the more remote one recognizes dull sense of symmetry in their compass.

Following the Ostrogoth supply-year procedure, I consulted 27 blind, and, to be sure, 18 men and 12 women, on their sense of color. The test showed that of all only one man had "weak color sense," of the others, on the other hand, had "normal color sense." Here was the symbolic significance of the colors should be considered black a color sensation, red (blood) a cry, green a pierce, rectangular, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly. Some of persons known by them are at sure, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them; they regarded such a one as incomplete.

Their power of attention to the engine and their memory for parts were taken as evidence of land movement are excellent. Their memory for numbers seems to be better than that of some others in the interior of Ban Ankara, where, within the larger, they do not use mathematical aids such as watches to write, learn to write, etc. Their power of converting numbers into sounds seems to go beyond five; only a few could recognize at a glance the correct number of more than five objects placed before them.

Their feeling for plastic art is shown by the rich and not unsuccessful adornment, the handsome forms of their compass, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking; their singing is arbitrary and without rules, the main thing in it is the text and the alternation in the vocal execution. They do not have musical instruments, for the unique horn of the messenger to legal proceedings serves only to attract the attention of the people through loud noise. The following is a common way to accompany the dance (1):

1. Recorded by Dan Dalmaw /half physician/
Dr. Sandrini.

In Sen countries the sole sign who is the leader of the red Kiziki ch. It is Mulam, who was wounded in the Sotsek/Gen. Pomp/, so that his red blood ran into the "mudgum" (the Sotsek treasure of Catalan dizzy Jewelry) who the leader of the red Kiziki, ch. Mulam, who ran taken out the blood from his mudgum.

For judging the beauty of the human body Sen people in general apply the same principles as the European does.

The blond idea of beauty calls for a well-built, slender body with slightly rounded forms. In contrast to most other black peoples, among whom corpulence is taken as the unmeaning stick for feminine beauty, a blond beauty may not be heavy. Her Uncle must show just enough roundness so that they do not appear angular. Further requirements for being regarded as beautiful are: oval face, white teeth, black gums, a skin color as light as possible, protruding butt-in

237 [283] Naa, ten čari ol-mēut, il-lenyok eitauni pe eripye 'n-doiye 'musetani oo 'l-turesh.

If a giraffe is killed, only the long hairs of the tail are preserved. The girls use these as thread to sew the beads on to their clothes.

Naa, ten čari o-sírua, naa 'n-gända eitauni, p' eänyeki 'n-gíshu.

Should an eland be killed, strips of the hide are taken and made into thongs for fastening the cattle with.

[292] Naa, ten čari e-sidai, naa 'l-ōpir eitauni pe epika 'l-muran ten epwo en-jore. Nepika sii 'l-ayok ten emurati.

When an ostrich is killed, the feathers are made into head-dresses, which are worn by the warriors when they go to war. Boys also wear ostrich feathers when they are circumcised.

Naa, ten čari ol-ñgatuny, naa ol-chōni lenye eitauni p' eitaa 'l-muran en-dōki naji ol-ñgatuny, naata 'l-papit adoru, nepik il-lughuny ten epwo en-jore.

[292] Whenever a lion is killed, the hide is taken, and the warriors make a head-dress out of the mane. They wear this when they go to war.

Naa, ten čari o-engat, neitauni ol-kidoñgoi, p' eitaa 'l-mórnak ol-lenywa.

[293] If a wildebeest is killed, the tail is kept, and the elders make their fans from it.

Naa, ten čari ol-maalo, neitauni 'mōwarak, naaoshi te-'n-aidura pe meimin ol-orere.

[534] Should a greater kudu be killed, the horns are preserved and blown when people move their kraals, so that nobody shall lose the way.

Naa, ten čari sii e-muny, neitauni e-mōuo negwetunyeki 'l-kuman ooidoñgyeki 'l-oroi oo 'l-oiñgok. Neitái sii 'l-kuman loo-'l-aigwenak.

[411] Lastly, if a rhinoceros is killed, its horn is taken and carved into clubs, which are used for beating the he-goats and bulls with. The counsellors' clubs are also made of rhinoceros horn.

Lello-shañgit eataye 'l-Maasae en-giaa.

These are the wild animals of which the Masai make use.

224 Naa, ten enya ol-ōwaru 'n-gíshu araki 'n-dare, pe edol il-Maasae, nōar, amu ōjo: 'Einos in-gíshu añg.' Ore 'l-ōwarak oinos in-gíshu oo 'n-dare, ol-ñgatuny, o ol-keri, o ol-ñgojine, o en-dersah.

A Masai will also kill a beast of prey if he sees it eating cattle or goats, for he says: 'It has eaten our cattle.' The beasts of prey which eat cattle and goats are lions, leopards, hyenas, and jackals.

fire as a symbol of the new relationship between the elders and the candidates. 88 561

The next stage of *Endungore-Engibata* is the election of the unit leader (*aigwenani*). This office is not popular with the boys, [53] and the election is kept as secret as possible from the person concerned. It is not very clear whether the election rest primarily with the boys or with the elders, both have a say in the matter since it is of common concern. [54] The selected person is chosen from the so called *ingopior*, i. e. "those who have shown ability and strength of character during the many debates already held" (WHITEHOUSE). This indicates that he must be a man of talent and personality. Some consideration is also given to the clan and family from which he comes. [55] The appointment is forced upon the boy, but only after the approval of his family has been obtained. The insignia of the *algwenani* is a black club, which is presented to him by the leader of the elders. Prayers are also offered for the new elect. [782]

The naming of the age-unit takes place now with great solemnity. Not all the candidates are present but only a few of them. [56] These are called *mejengema*. They take part in the ceremony dressed up in full regalia and painted with red clay and chalk. [57] [302]

On the following day a great sacrifice of two bullocks [58] is also

[53] For the same reason given for the *ol opolos*.

[54] WHITEHOUSE states that "the names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves". On the other hand FOX, *l. c.*, p. 450, states that in the first instance the nomination is made by the elders, and if the candidates are dissatisfied with him they may ask for a change. MERKER, *l. c.*, p. 61, states the boys elect one of their member.

[55] Particularly, he must not be a member of the *Engidongi* clan, the clan of the *laibon*. [614]

[56] According to DAWSON, the *mejengema* must be 49 if the ceremony is for the 'right-hand' unit; 48, if the ceremony is for the 'left-hand' unit. These boys must be pure Masai, and must never have killed a Masai.

[57] "The *mejengema*", writes DAWSON, "assemble in the middle of the village and the *Aigwenani*, having poured honey beer into a trumpet made out of a *kudu* horn, blows two blasts on it and shouts the name. There is no answer as this name must never be mentioned by anyone. He again blows the horn and shouts out another name and is answered by a shout of 'Ho' from the *mejengema*. He again shouts out the name and is again answered by a shout of 'Ho'". The name is later announced to the other candidates by the leader and the *mejengema*. [534]

[58] The sacrifice of the bullocks (one must be entirely white, the other entirely black!) is ended by great ceremonial. The two beasts are smothered and [782]

FL12 Masai FL12

262 opened a vein and drank the blood fresh from the animal.
884 This proceeding of our voracious young friends was a wise though repulsive one, as the blood thus drunk provided the
[263] salts so necessary in the human economy; for the Masai do not partake of any salt in its common form. This sanguinary draught concluded, they proceeded to gorge themselves on the flesh, eating from morning till night—and keeping their cook steadily at work. The half-dozen men were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to resume the milk diet.

884 If they lived an ascetic life in the matter of food, they
836 could not be said to do so in other ways. Life in the warriors' kraal, as may easily be conceived, was promiscuous in a remarkable degree. They may, indeed, be described as a colony of free lovers. Curiously enough the "sweetheart" system was largely in vogue, though no one confined his or her attentions to one only. Each girl, in fact, had several sweethearts, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Ditto and El-moran, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

884 Till a war-raid was planned, Moran, our interesting
517 *protégé*, found he had nothing to do but make acquaintances
701 and amuse himself with the girls. His cattle were looked after by some poor menials, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no fence for protection was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his muscle by the peculiar mode of dancing described in the Taveta chapter. Unlike negro tribes, they led what might be called a serious life. They had no rollicking fun, no moonlight dancing, no
[533] lively songs, no thundering drums. No musical instrument
[534] whatsoever enlivened the Masai life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything hushed up in silence.

624 Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Lytunu* and a *Lygonani*.

[FACING p. 30]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *ol-taika;* other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrap* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 411 [412 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Neiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, "the mediator between God and men." But the Masai word *naiterukop* means no more than "that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-apa*, the moon, is grammatically masculine. 771 774 [114] 776 [782]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

561 535 [386] [574] [262] warcry of old: 'I am the son of So-and-So,' and 'I am the Son of Such-and-Such' and drive their branding irons into the outcrop. They fill their gourds with it and then return home and are treated with great reverence at Masai villages *en route*, being fed on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 50 yards apart, and marched to the village. Many wore ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured crescent-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: '*Endopok!*'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group led by an elder blowing a kudu horn (one of the very few Masai musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the *O-Singira* hut. [534]

561 [302] [413] Late in the afternoon of this day the mothers of the 49 'pure ones' shave their sons' heads. All the hair, eyebrows included, is removed by means of a spatulate Masai razor. Milk is used in place of soap. Whilst being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the *Ol-Otuno* and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family home. Great care is taken that none is left lying about in the open in case birds should use it for their nests—a grave affront to the young men's sacred role. [825] [554]

During the course of the day the branches used as night barricades between the houses were replaced with new ones bearing green leaves. This is a symbolic act, meant to ensure that the *muran* may flourish as 'green bay trees.' [789]

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the *Ol-Otuno* from his father, is driven into the bush and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the *muran* gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' whilst their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the *muran*, naked and still whitened with diatomite, came running back to his hut. There he received a deafening welcome from his family, whom he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of *muran* leading their families round the *O-Singira*, everyone shouting and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the *Ol-Otuno*'s heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'pure' 49 arrived, their shaven heads gleaming, white circles of diatomite like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the *O-Singira* whilst the *Ol-Otuno* was led to his hut. In front of his doorway was placed the hide on which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The *Ol-Otuno*, who seemed all too conscious of his role of scapegoat, then sat on the stool. [351]

[Warrior Kraal]

/86 cont./

701 speaking, yet their facial expression usually remains unchanging,
531 neither agreement nor difference of opinion may be read into it. The orator is not interrupted any more than he is forced to become silent by the restlessness of the listeners. Each one is allowed to deliver his speech unhindered to the end. We have here the simple flowing speech, in contrast to the dialogue type of the Negroes, where another respected man stands or squats opposite the speaker and at every punctuation pause, at every comma of the speech given jerkily in choppy sentences, makes known by an unbelievably stupid-sounding, more or less grunting ɛ̄, ē, or hm that he has understood the words spoken. The task of the speaker consists chiefly of arousing, by means of a feigned friendship with the chiefs of livestock-rich peoples, in the latter a blind confidence in the Masai, /87/ which
701 will facilitate for the latter a sudden, predatory attack. Moreover,
726 he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether he perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most livestock might be, where they pasture,
701 where they stay at night, where the fewest warriors live, etc. The
[554] speaker himself need not be a brave warrior; rather, cunning, deception, guile are the characteristics that qualify him for the political aspect of his office.

Another task is the administration of justice incumbent upon
[692] him; he is the deciding judge in civil and penal matters for the warriors of his kraal.

701 A leading role among the warriors is played, furthermore, by
554 the el oiñok (1)

1. Sing. ol oiñoni.

(= the bulls), of whom there are five or six in every kraal and who gain their position by courage and bravery in war, as well as by superior physical strength. They are the leaders in battle. As a
[714] sign of their rank they wear, in dancing and in hand-to-hand
[534]

[Warrior Kraal]

/87 cont./

701 54 fighting, large leg bells (el duallan kitwa), the tinkling of which in
[714] the latter instance serves to prevent a going astray by the individual
[534] warriors and a scattering of the troops. Where the bell sounds is a rallying point.

A special position is also occupied by the ñ gāminini = benefac-
[556] tors. They are warriors who, themselves generous, also have a generous, well-to-do father. From him they often receive oxen for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

701 Accordingly, miserliness is sharply condemned, and a miserly
703 warrior or one who has miserly parents is treated badly and, in case
577 of illness or wounding on the way, is not infrequently left to lie helpless.

701 Speaker and leader live like other warriors and are not surrounded
578 by any special ceremonial. Off duty they are treated with respect,
[554] which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to dueling, in which the opponents go after each other with sword and club, but only very rarely
[683] wound each other seriously. If this should happen sometime, in a few districts the wounded one receives from the victor a fine con-
[431] sisting of livestock; in other districts, only if a bone is broken. In general immediately after the duel /88/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also
701 the exchange of the skin cape (e megiti). The matter becomes more
578 serious if one is killed in a duel. First the father of the victor is then
682 condemned to pay a larger number of cattle. If he hands them over, the affair is settled. If he refuses them, however, the friends of the man killed attack his kraal and rob him of his entire herd. But they have scarcely brought them home before the friends of the one robbed also try to rescue them again. This goes on until they have become tired

/173/

233 The foliage of the ol jani l el sirgon tree (Cadaba farinosa),
232 that is, tree of the donkeys, is regarded as poison for donkeys.
[231] Besides a horsefly, ol gimbai l ol sirgon, from whose bite the
[824] donkeys (bitten in the penis) are stricken beyond recovery, the Masai
[136] also fear for donkeys and cattle the tsetse fly (Glossina morsitans), which they call en dorobbo. The latter is allegedly only dangerous to cattle if it bites them in the tip of the tongue. One seeks a cure by cauterizing the spot bitten, but the result is very doubtful.

For getting rid of fleas, one washes young livestock with an extract from the crushed plants of ol osidja gutok (Asystasia gangetica L.) or from ol abai (Microglossa spec.).

The powdered root of ol girigir (Acacia pennata Willd.) is blown into the nose of calves and small livestock, in order to drive out the maggots of the throat fly /warble fly/.

233 Cowbells (Fig. 77) in the form customary in Europe are found
• 534 generally, but here they are hung especially on oxen and only on those cows that do not tolerate their calves. Smaller bells, often

Fig. 77. (1/6)

Fig. 78. (1/6)

of wood or sheep horn with wooden clappers, are worn by castrated
233 sheep and goats. As adornment one hangs around the neck of castrated calves clapper-shaped pieces of ivory (Fig. 78) or, for especially handsomely developed cattle, a leather band or a cord stitched with cowrie shells.

/288 cont./

*539 The plagues had created a hitherto unknown contrast of rich and poor. In order to alleviate this, to bring the impoverished back to well-being, Gulale arranged that the people of a larger circle gather together at the new moon of the seventh month, the ol ogunj' airodjerod. In this way he succeeded in having the tribal and lineage members meet at least once a year, become better acquainted and more closely joined. Apart from the fact that with the strengthening of the feeling of solidarity the sympathy for the fate of the impoverished tribal members grew, the new arrangement was primarily supposed to facilitate the kind of support prescribed in the sixth of the commandments imparted by Ol dirima. This feast on the seventh new moon of each year is called kitok n oloñ essubaté. Messengers of the ol aigwenani announced the approach of the day in the individual districts, [202] within which the people were then called together by the sound of the • [534] antelope horns serving as trumpets, as is still customary now for every gathering.

Getobua gave birth to the boy Lengutok (engutok = mouth), who later, as a youth, was distinguished by great physical strength; if a lion approached the herd, he leaped upon it and strangled it with his hands. As a brave warrior, still young in years, he fell because of an arrow shot in battle against the el meg. Shortly before, he had married Lahaine, who had been named after a like-named mountain. After Lengutok's death she married an adopted son of Getobua, named Ngamnin, one of those orphaned children, and she bore him first a daughter, Nairenna. She was named this because at her birth the umbilical cord was wound around her neck (= os sotua erinaginno e murt). Nairenna later became the first midwife. Afterwards Getobua gave birth to the boy Gariuñgi. He invented the draw well (1).

1. ol gessimet, el gessimeti.

OOO There remain to be mentioned a few reminiscences from the primeval age of the Masai, which cannot be classified in any definite place in the foregoing chronological account of their tradition.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 "I say, thou art no longer *ol moran* (a circumcized, a warrier),
[539] but *ol morou* (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks MERKER, "it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in
[591] his father's kraal or in the warriors' kraal (*manyatta*) until all his age-mates have married. Only then he is recognised as *el moruo*;
561 each one builds his own kraal and lays aside the clothes, decora-
554 tions and the pigtail of the warriors".

[587] It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognised" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

561 A very detailed description of "the *ngeherr* of milk" is given by J. V. DAWSON, but the ceremony is mentioned also by other authorities. FOX,[155] states that "this ceremony is performed by each warrior individually",[156] and DAWSON tells us that it occurs at the village of the initiate's father and that four *piron*-elders take a special part in it.

[535] The ceremony is preceded by a dance. The candidate is clothed
[392] in women's clothes and the first two of the elders place women ear-
[301] rings (*surutya*) on him.[157]

A test follows, in which the candidate is expected to confess
[783] how many times he has "stolen milk", i. e. taken milk by himself
[685] or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" at this

[155] FOX, *l. c.*, p. 453.

[156] He says also that "the ceremony usually takes place nowadays a year or two after the *E-unoto* owing to the Government policy of reducing the period of warriorhood as much as possible".

[157] These ear-rings, *surutya*, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a femine type.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

time. Then the dance is resumed until night. At this stage the initiate is allowed to have intercourse with his wife. [561] [535] [533]

The next morning the initiate, as soon as he rises, again drinks some milk. Then he is smeared all over with a special mixture by two of the elders, who also present him with an olive and a bamboo stick. A procession is then formed from inside the hut, where these ceremonials have been accomplished, to the cattle kraal. Here the elders choose four or eight " (it must be four or eight) " head of the initiate's cattle, end he hits each one of them with his olive stick.

The initiate must now remain inside for five days. On the fourth day his mother pours liquid, half milk and half water, on his head, and then the mother shaves him. [158] The ceremony is now complete.

FOSBROOKE, [159] makes reference to a similar ceremony " by which a *moran* is permitted to drink the milk from his wife's cattle ". [160] He then remarks that " this does not, however, permit him (the initiate) to drink milk by himself; this must always be done with his age-mates until such time as all go through the *ngeherr* ceremony ". This indicates that " that *ngeherr* of milk " must also be considered as an individual anticipation of the status officially recognised only at the corporate ceremony.

We do not possess any detailed description of " the *ngeherr* of meat ". We are informed by FOX, [161] that the ceremony takes place, and he records it as " the second *ol-ngesher* ceremony, called the *Ol-ngesher* of meat ". After such ceremony the initiate may eat meat freely, and, if he chooses, eat meat which has been touched by a woman. [262]

The *ngeherr* proper is the closing ceremony which finally institutes the age class. It is celebrated by the Kisongo, but acknowledged and accepted throughout Masailand. [162] The ceremony is briefly described by MERKER, [163] as follows: " when all the members [184]

[158] These formalities may be performed either by the candidates' mother or his first wife, provided the latter had not conceived while he was still uninitiated, or by the two women together.

[159] FOSBROOKE, *l. c.*, p. 30.

[160] The expression " his wife's cattle " sounds inaccurate and indefinite. Probably it refers to the initiate's cattle tended by his wife.

[161] FOX, *l. c.*, pp. 453 s.

[162] FOSBROOKE, *l. c.*, p. 30, states that the ceremony " is traditionally held at *oldonyo loo 'l moruak* (the hill of the Elders), Upper Sanyas, Moshi District.

[163] MERKER, *l. c.*, p. 73.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

The *Lytunu* is a warrior elected by a number of kraals as 624
their captain or leader, with absolute power of life and death. He is their judge in cases of dispute. He directs their battles, though, curiously enough, he does not lead his men, but, like the general of a civilized army, he stands aside and watches the progress of the fight under the direct command of the *Lygonani*. If, however, he sees symptoms of his men wavering, he forthwith precipitates himself with his body-guard into the battle. Of course he holds his office purely on sufferance, and if he fails to give satisfaction he is summarily deposed. This, indeed, is almost the only attempt at a form of government. Each war-district elects its own *Lytunu*. The *Lygonani*, again, is a very different personage. 622
He is the public leader of a kraal, leads and guides the debate in cases of dispute. To be such arrogant and pugnacious savages, the Masai are the most remarkable speakers and debaters imaginable. In some American novels we have the Indian belauded for his eloquence and dignity; but commend me to the Masai for grace and oratorical power, for order and decorum in debate; and, indeed, for most of the good qualities which in these days are conspicuous by their absence in our own House of Talking. Not that their genius in this line is always worthily applied; for in their finical persistency in talking out a question they might even beat our Parliamentary Obstructionists. They will spend days discussing the most trivial matter—nothing, indeed, can be settled without endless talk. But we must proceed with our history.

The *Lytunu* and *Lygonani* having been elected, a raid to 726
the coast was determined on. For a month they devoted themselves to an indispensable, though somewhat revolting, preparation. This consisted in their retiring in small parties [261]
to the forest, and there gorging themselves with beef. This they did under the belief that they were storing up a supply of muscle and ferocity of the most pronounced type. This strange process being finished, and the day fixed on, the women of the kraal went outside before sunrise, with [782]
grass dipped in the cream of a cow's milk. Then they [535]
danced and invoked Ngai for a favourable issue to the enterprise, after which they threw the grass in the direction of the enemy. The young men spent several hours at their devotions, howling out in the most ludicrous street-singer fashion, "Aman Ngăi-ăi! Aman Mbaratien!" (We pray to God! We pray to Mbaratien!"). Previous to this, how-

is called an *ol emal*. The boys may carry knives for defence but not spears, for it is said that a spear is a sign of force, and their quest is a peaceful one. Each boy must carry a bow, for the bow is a token of peace. Furthermore it ensures that any reasonable request the boys may make during the *ol emal* will be granted. No Masai may refuse the request of one who carries a bow in his hand. The boys take no arrows with them. They visit all the principal villages and in dance and song they announce the object of their visit. They then seek out all the bigger boys of the village and add them to their number. If they wish to spend a night at a village they beg an ox for food from the elder of their sponsor's age-group. Elders of other age-groups present them with milk to drink. In this way the news is spread far and wide and finally the boys, now of considerable numbers, return to the elders who despatched them, taking as a gift a large quantity of honey. Then a special village is erected in which only the boys' sponsors and their families may live. The boys borrow ostrich feathers and lion mane head-dresses from the warriors and on the appointed day they collect at the elders' village.

The ceremony commences with a dance called *engfbata;* for this, the boys form three files, one wearing ostrich feather head-dresses, the second wearing lion mane head-dresses, and a third, of boys who have decorated their bodies with broad stripes of white earth to resemble zebras.

The latter must be quite nude; those who wish may wear thigh-bells. They may not carry weapons of any sort, but each carries a thin wand, the length of a spear. After much dancing, the boys form a procession and walk round inside the circle of huts following two leaders, one of whom blows a Kudu horn from time to time. The procession then halts and the leader prays aloud to *Engai Narok* —the Black God, to shower his blessings on the boys. This prayer has been taught them beforehand by the elders, some of whom stand by and prompt when necessary. When the prayers are over, the elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return is then made to the village and the elders bring a fire-stick, the one called *ol-piron*, also a male circumcision knife and a small dead bird. This bird may be of any kind other than a dove. The elders break the fire-stick before the assembled boys. They then place a curse upon the circumcision knife and taking the dead bird they break one of its legs and pierce one of its eyes—presumably as an indication of the ill which will befall any boy who dares to be circumcised before the curse is taken off the knife.

In this way, the elders formally lay claim to the sponsorship of a new age-group. From that time the boys refer to their sponsors as *Il-piron*, whilst the elders refer to the boys as *Il-piron*.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

francolin. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *laibartun* and are free to go anywhere "like women," and, in fact, may even visit the *manyattas* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *oringoiles*, which are danced by the novices alone.

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior.

The new warriors now form themselves into groups, and organise the building of villages, which will be their headquarters. These villages are the *manyattas* of the warrior groups (*see* below).

PART III.—WARRIORHOOD.

The Age-Group System.—The general word denoting an age-group is *oriniori*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single ox-seizing ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *jangienabur* and *murategdienge*.

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *jangienabur* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *jangienabur* and a *murategdienge*, must move out together, leaving the next *jangienabur* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *murategdienge*, and in due course yet a third group will be initiated and enter the age-group as *jangienabur*, after which no further transfer of a novice group can take

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

When the time for the ceremony arrives, a very big village is built called *sumubu*, and all the members of that age-grade which is to be transferred from the Junior to the Senior Warriorhood stage assemble here with their friends and relations. The warriors concerned all dress up in their very best finery, and lion skins especially are in great demand; and for nine days they dance a special dance called *Kaibuck el morus*. During the whole nine days of dancing a very great number of cattle are slaughtered, and there is great feasting and beer-drinking, but neither the dancing nor the feasting are the important part of the ceremony; they are merely incidentals, centred around the *thingira*. 56 [535] [594]

The Thingira.—Away from the main village an enormous hut has been built which will accommodate anything up to four hundred men at a time. It is said to be round in plan, to have a pointed roof, and to take very many days to build. There are no partitions inside it, but in the centre is dug a circular pit. Outside the hut is a thorn fence with only one entrance. This hut is called *thingira* (a word which has been borrowed by the neighbouring Kikuyu and applied to ordinary bachelor huts), and is the centre of the whole of the *Eunuto* ceremony. During the whole of the nine days of the ceremony this *thingira* is used as a "club-house" by the men of the age-group concerned with the ceremony, but there are certain restrictions, and it is these restrictions which give the key to the meaning of the whole ceremony. It is considered both ignoble and dishonourable for any man in the warrior groups—and more especially the junior warrior group—to have any sexual relations with any but the uninitiated girls, but, of course, cases do occur either openly (*see* Forced Marriage) or in private. Now all members of the age-group concerned must be present at the *Eunuto* ceremony, but only those who have strictly observed the above regulation and have never had sexual relations with an initiated girl or married woman may enter the *thingira*. In order that no one may do so under false pretences the entrance to the *thingira* is bewitched by the elders, so that if anyone ineligible enters he will surely die. 56 34 [192] [834] [754]

The *thingira* is not big enough for all the warriors concerned to use it simultaneously, and each day for the nine days there is a public ceremony when the various individual territorial groups are expected to enter. For this ceremony all the friends and relations of those who are expected to enter collect round the entrance and each individual as he enters is greeted with applause, as he has shown by entering that he has not dishonoured himself or his family. Those warriors who dare not enter try to slink away unobserved, for they are disgraced. Inside the hut—as mentioned—is a large hole which is used as a cesspool, into which the men who enter the hut must urinate. This cesspool is also bewitched as an extra precaution, and anyone who has falsely entered and evaded the witchcraft of the entrance will certainly die upon urinating in the hole. All those who enter the *thingira* on any given day during the ceremony sleep there that night, and also have milk and meat brought them for food, and sit and talk for hours. During [514] [754]

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

are often called *I-Sipolio* or *'Loiborton* (see Hollis, p. 298, Pl. XIX). They shoot at girls with wax-headed arrows, and a girl who is shot must then give the novice a ring, which is usually, if not always, of a special type, being very much curled and twisted. The novices must observe the following rules :— [56] [178] [301]

They must enter the village before the cattle every evening.

Must not drink blood or cut meat or touch it with the hand.

Must not wash.

Must not have sexual intercourse with girls (this is not kept strictly).

Must not fight or be struck by anyone. Anyone who strikes a novice must put milk on his head.

Must not go out in the day time without the head-dress of stuffed birds.

O-Siapolio, plur. *I-Siapolion*, is the general word for any dance. (Cf., p. 191.) [535] [192]

Warriorhood.—The Age-group system plays such a large part in the tribal organization that I will deal with it in detail.

A right-side circumcision is called *E-Muruta e tutrea* — the circumcision of right. A left-side circumcision is *E-Muruta e kolpange* — the circumcision of left.[1]

Each of these groups is called *Ol poror*, an age-group. Each age-group takes a temporary name soon after circumcision and receives a new one at its *E-Unato* ceremony. For example, the present age of Purko warriors was called *Il-Tiapi* prior to their *E-Unato*, when they took the name of *Il-Salouak*.

A right and a left age-group together form a larger group, which I shall refer to as a generation in contradistinction to an age. The term for a generation is *Ol oji*, but it is also often loosely designated as *Ol poror*.

Speaking generally, each section has a different name for its warrior age-groups. The exceptions are (*a*) Loita and Siria. (*b*) Kabutei, 'L Odokilani and Matapato, who respectively share a single *E-Unato* ceremony and therefore have age-names common to their respective groups.

The generation names emanate from the Kimonge in Tanganyika Territory and are common to all the Masai. They are given soon after the warriors of the combined ages have become elders. Thereafter the age-names tend to fall into disuse and be replaced by the generation-name. [184] [552]

A large number of names is given in Hollis, p. 303, but forms an indiscriminate mixture of age- and generation-names.

In the following table I have confined myself to names in everyday use in order to avoid errors and make for simplicity.[2] It will be noted that several sections do not have a left-side circumcision. In the remaining sections the right side is more popular than the left.

[1] I do not know the origin of the terms "right" and "left."

[2] For other generation-names see History, *infra*.

561 **The 'E-Unoto' Ceremony of the Masai.** *By Lord Cloud Hamilton. With three text figures*

135 The cycle of ceremonies connected with the forming of a Masai age set starts with that known as *en-poloana*, performed by the members of the age set immediately senior to the existing warrior set. These members are destined to become the instructors in tribal lore of the youths who are about to comprise the new age set. *En-poloana* is followed by *en-dungwe* which marks the end of the current circumcision. These two ceremonies are followed by a four-day dance of the initiates-to-be called *en-kipanie*; and the circumcision of the new age set is carried out over the next three to four years, the youths being 14–17 years of age. Each generation is divided into Right Hand and Left Hand circumcisions; the latter begin their ceremonies about six to seven years after the former, but both cease to be warriors at the same time.

[528]

Seven years after the beginning of their circumcision, the members of the Right Hand Circumcision become senior warriors through the *e-unoto*. This ceremony, which is part of the age-set institutions, is held about every seven years, when an age set of junior *morus* (warriors) feels that it is sufficiently strong and mature to graduate into senior *morus*, and so 'push' the next senior warriors of the previous age set up into adult manhood. The word *e-unoto* is derived from the verb *o-un*, to plant upright or set up (*i.e.* a new age set of senior warriors is 'set up') and, as will be seen below, certain things are ceremonially 'set up' in the *manyata* (warriors' kraal) where the ceremony is held.

Tribal elders choose a site for the ceremony, and there the *morus* who are to take part, aided by their mothers and girl friends, build a new kraal. Each young man has his own hut, a long, low building of withies, mud and cow dung. These are built in a circle, facing inwards. At night branches are pulled into the gaps between the huts to keep out wild beasts which might prey on the cattle sleeping in the arena encircled by the huts.

[342] [361]

Besides choosing the site, the elders also select 49 *morus* from those about to take part in the ceremony. These 49 'pure ones' as they are called must be young men of good character, 100 per cent. full-blooded Masai and without physical blemish. Their leader, the *Ol-Ounos*, is chosen secretly and is not told of his appointment until the ceremony is due to start. Every *morani* dreads being called upon to fill the position for the *Ol-Ounos* is regarded as a scapegoat for the misdeeds of his fellows. They believe that if he dies young as a sacrifice for their sins, they will live long and prosper.

[983]

After the other huts have been built, the mothers of the 49 'pure ones' build the sacred hut called *O-Singiro*. This is a round building, also made of branches, mud and cow-dung, topped with a conical roof of the same materials. Around its base is laid a circle of bullocks' skulls on which are left the horns and a strip of skin running down the face. Inside, in the centre of the *O-Singiro*, the *Ol-Ounos* 'sets up' a stick of the wild olive tree (*Olea chrysophylla*) and so receives his name which means 'He-who-set-it-up.' The doorway of the *O-Singiro* faces that of the *Ol-Ounos*'s hut, next to which is that of his assistant known as 'The Cutter-up of the Hide.'

[346]

[339]

The *e-unoto* of the Loita division of the Masai was held on 10–13 June, 1959, at Entuarkera in southern Kenya. The youths taking part were of the right-hand circumcision, the members of which are known as *Il-Deregyani*.

561 535 The ceremony lasts for four days, and the first of these is called 'The Day of the Red Dance.' At dawn breaks, all the people assemble outside their huts facing east. Four elders chant a prayer

SHORTER NOTES

561 535 [237] calling on every man to love his neighbour, and the crowd then call '*Hoi-yior*' three times—a form of 'amen.' In the centre of the arena—about 70 yards across—some long poles were 'set up' in the ground. To the tops of these were tied some of the ostrich-feather headdresses which Masai *muran* like to wear; and on the branches of nearby trees were more of these and also a number of the conical hats made from lions' manes—not unlike guardsmens' bearskins—which are worn on ceremonial occasions by those who have killed a lion with a spear. [292]

FIG 1. THE E-UNOTO, FIRST AND SECOND DAYS

Above, the Red Dance, girls and warriors dancing; middle, the White Dance, diatomite-smeared warriors dancing; below, the White Dance, bowing to the O-Singira. Photographs: Lord Claud Hamilton, 1959

[292] The *muran* taking part in the Red Dance wear a single garment consisting of a length of russet-coloured calico knotted over the right shoulder and hanging down to the thighs. Their hair is worn shoulder-length (a feature of the young men of pastoral tribes of [302]

16:Hamilton U-5 (1959) 1963
[p. 108 – A] FL12 Masai FL12
Loita

561 East Africa), and the whole body is smeared, from the crown of
535 the head down, with a mixture of red mud and beef fat. The
[302] dancers gather together into groups of a dozen or more, all facing inwards towards a small open space. One young man steps forward into this space, makes a few prancing dance steps, and then starts to jump perpendicularly up and down, his long hair flying up above his head into a kind of halo at the top of each jump.

FIG. 2. THE DAY OF THE SACRED HUT

Above, warriors leading their families round the O-Singira; middle, the warriors throwing fits; below, warrior with feather headdress throwing a fit

Meanwhile the other dancers chant and grunt, awaiting their turn to jump. Now and then this type of dancing was abandoned and the dancers formed up to single file, going in procession back and forth across the centre of the *manyatta*. As the number of dancers increased, the young men became more and more excited and
[158] soon a number were throwing fits. Foaming at the mouth, eyes staring, arms rigid at right angles to the body the sufferers stagger wildly about until friends come to their aid and hold them down.
[216] These fits are caused by the habit of drinking an infusion of the

276 bark of certain trees, a relic of the old cattle-raiding days, for when
561 the fit has passed the sufferer loses all fear and is ready for battle.
535 An unusual feature of the drug is that, once in a man's system, its effects last for life, and, given sufficient excitement, the man is liable to fits for the rest of his days.

561 The second day of *e-unoto* is called 'The Day of the White
535 Dance.' Soon after sunrise the *muran* went off into the bush to

[302]

FIG. 3. E-UNOTO CEREMONIAL

Above, some of the 49 'Pure Ones' dancing with their comrades; middle, the Ol-Otuno, *who is the first to be shaved, and who wears white diatomite on face and legs, leads his family round the* O-Singira; *below, a mother shaving her son's eyebrows as he sits on the beaded circumcision hide.*

[484] paint their bodies with diatomite. This white, chalklike substance is brought on foot from the Eburru Mountains near Naivasha in The Rift Valley. To bring it, two senior *muran* of good character are chosen, and they go off dressed in women's clothing and ornaments, carrying bamboo staves and cattle-branding tools as a sign that they are on a peaceful errand. Nearing the destination they stalk the diatomite as if it were game. Then they give the

561 warcry of old: 'I am the son of So-and-So,' and 'I am the Son of
535 Such-and-Such' and drive their branding irons into the outcrop.
[386] They fill their gourds with it and then return home and are
[574] treated with great reverence at Masai villages *en route*, being fed
[262] on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 50 yards apart, and marched to the village. Many wore ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured crescent-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: '*Endopok*!'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group
[534] led by an elder blowing a kudu horn (one of the very few Masai musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the *O-Singira* hut.

561 Late in the afternoon of this day the mothers of the 49 'pure
[302] ones' shave their sons' heads. All the hair, eyebrows included, is
[413] removed by means of a spatulate Masai razor. Milk is used in place of soap. Whilst being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the *Ol-Otuno* and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family
[825] home. Great care is taken that none is left lying about in the open
[554] in case birds should use it for their nests—a grave affront to the young men's sacred role.

During the course of the day the branches used as night barri-
[789] cades between the houses were replaced with new ones bearing green leaves. This is a symbolic act, meant to ensure that the *muran* may flourish as 'green bay trees.'

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the *Ol-Otuno* from his father, is driven into the bush and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the *muran* gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' whilst their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the *muran*, naked and still whitened with diatomite, came running back to his hut. There he received a deafening welcome from his family, whom he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of *muran* leading their families round the *O-Singira*, everyone shouting and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the *Ol-Otuno*'s heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'pure' 49 arrived, their shaven heads gleaming, white circles of diatomite like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the *O-Singira* whilst the *Ol-Otuno* was led to his hut. In front of his doorway was placed the hide on
[351] which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The *Ol-Otuno*, who seemed all too conscious of his role of scapegoat, then sat on the stool.

/31 cont./

517 For the most part an atmosphere of dullness and boredom lies
535 over the kraal of the married (eṅg aṅ el moruak). Only on moon-
[533] lit evenings /32/ do the women amuse themselves with song, especially if a few warriors are there on a visit and give the impetus for the gaiety. Women and warriors dance in separate groups. For dancing the women station themselves in a row, move forward a short distance, then make a "right turn" and, with short steps, dance in a row back to the former place. The married men dance only on festive occasions, but by themselves. The text of the accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in; in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at 8:00 o'clock or 8:30.

621 Even 12-14 years ago, before the Masai lost their huge
592 livestock-holdings in two great epidemics, each family had its
178 own kraal; now, on the other hand, almost everywhere several
233 families live together.
731

In the morning life begins around 4:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[462] and take them to the cows, where they remain for the driving out
[233] to pasture. At daybreak the milking commences, for which all
[234] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good breeding. Men and women eat apart and have their separate vessels for eating and drinking. Those of the latter are shared by the children. If the man wishes to eat in the hut, the woman has to leave it beforehand.

/56 cont./

553 afternoon the festive company sits down in a circle under a shade tree in the vicinity of the kraal, half of it made up of the men and the other half of women. The infant to be baptized sits on the lap of its mother, who, along with the other women, is still deliberating over the choice of a name. A neighbor suggests that they should name the boy ol gorog, that is, the short one, because he is still quite short for his age, whereas another reminds them of the joy that the mother had when she found an ostrich egg on the steppe a few days before her delivery, and opines that they might give the little one the name Mosorik (from e'-mosorik = the egg). After the women have been chatting back and forth in this manner for a while, amid laughter, an older brother of the woman (1)

> 1. That it is he who does this, and not the husband, is probably to be understood as a survival from matriarchal times, and likewise that the mother, not the father, gives the first name.

gets up and asks her what the child should now be called. She
[551] mentions the name Ol loñgischu = cattle owner (2),

> 2. Obsolete in this meaning; the name Ol oñgischu now means that its bearer, for the price of a head of cattle, had his freedom purchased from the slave state into which he had fallen as a result of a cattle epidemic and famine.

which the old one immediately announces to the gathering, whereupon the latter give a cheer for the "baptized" infant and cry out "daba rischori ñ gischu n daré (acquire cattle and small livestock). Then the mother hangs a chain of large and small beads (es segerai, segera; e msitani, msitan) around the little one's neck. Now the entire company stands up and moves in single file toward the entrance of the kraal. Here lie the thorny branches that are pulled into the en-
[535] closure at night to shut up the kraal. They are danced around with short,
[533]
[782]

/56 cont./

553 535 538 782

stamping steps, whereby, singing, it is prayed to 'Ng ai that he may let the boy become big and /57/ make a strong warrior out of him, one who will capture much livestock and then in old age may own a kraal as large as this one is here; then the people enter the kraal where the men again apply themselves to finishing the honey beer, while the women amuse themselves with dancing, for which they sing with shrill voices songs of praise and prayer for 'Ng ai. The success of a festival is judged by the degree that the men's intoxication and the women's gaiety reach at the end of it. Soon after the first name-giving, the second follows, at which the boy receives a name from his father, by which only the latter calls him. More rarely

137 535 291

C. G. Schillings photo.

Ill. 16. Dancing women.

553

a small festival is also celebrated here. The most important name-giving does not take place until the child can walk. On this occasion the boy receives the name that he bears as his principal name for his whole life, and, to be sure, an elder brother of the mother or,

/57 cont./

553 lacking such, some older man of her lineage or tribe, gives it to him. The festival that is celebrated in this connection is very similar to the one described above at the first name-giving, but considerably more sumptuous. It is never lacking, whereas the other one is often omitted.

He receives his next name as a warrior, after his return from a campaign in which he has killed or seriously wounded one or more enemies. /58/ In full battle array, but without weapons, the [714] warriors assemble toward evening in their kraal; they squat together, [535] with a large number of young girls standing around, while those of them who are to receive the warrior baptism perform war dances with astonishing endurance, spear and shield in hand. After the new names have been agreed upon and have been called out to the ones concerned, they are celebrated in improvised texts. The names refer to warrior virtues, military events, or even costumes that the ones honored today wore on the last campaign. This festivity is repeated on each of the next four or five days in a neighboring kraal, to which the ones newly named wander with a number of their comrades and a crowd of young girls. Thus the new names quickly become generally known and familiar.

551 Names that the mother or father give to their small sons, besides the ones previously mentioned, are the following: Kaiga = the long one who can reach up high; Lesehga, from es segehgel = iron wire; Masagga, after the like-named area; Jäkŏn, after a former chief of this name; Bartelĭto, after the cloud of dust that the cattle stir up while being driven, may the son acquire so many cattle that their cloud of dust is very great; Ol ongoscho = pesa, the copper coin commonly used in East Africa and worth two pfennigs. For a time it was [301] very popular among the Masai as an ornament and was worn on a small chain or on wire in the upper rim of the ear; Lebeleb = thick lip. Names that boys received as principal names at the age of four or five are: Lassawoi = the clever one; Kohoge or Sabug = the fat one; Narondari = the goat-milk drinker; Araĭjo or Matanje = darling; Ngaije = given by God; Nasilani, after a tree called silani, whose

/61 cont./

881 question for the next circumcision period. These choose for this, as the site of the festival, a recently built family kraal, which is then designated as eng an 'n aibage 'l aijok. Decked out with a [292] [535] [533] costume in imitation of the warriors, but without weapons and, instead, a long stick in the right hand, the boys amuse themselves with dance and song in the vicinity of the kraal. When they crowd into the kraal after the first dance, in order to moisten their parched throats with milk, they are /62/ sprinkled with honey beer by an old man standing at the entrance and congratulated with the words: en dobollo, en daret ijōk, en dabo loscho, that is, roughly: may you become ever more numerous, make us rich, and bring prosperity to the country. During the festival the boys choose a spokesman or speaker (ol aigwenani) from their midst, whose task is to train them in comradeship and corps spirit. When the festival has lasted two days, the boys move into the various neighboring areas in order to repeat it there. In this way an eṅ gebāta often lasts a month. It is 881 also to be mentioned that very many women appear at these festi- 842 vals, and especially all who have up to then remained barren. The former appear in part as mothers of the celebrating boys, in part as companions of the barren ones, and the latter for their part come in order to have themselves pelted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a con- 881 viction prevailing generally among the Masai. In each of the following four to five circumcisionless years ('l ari otudunyeki 'l aijok) a similar festival is celebrated. It should be mentioned further that the [231] cattle whose meat is used to feed the participants at the eṅ gebāta festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival:

[301] A few weeks beforehand one already sees the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the [302] warriors. On the day before the operation the boy's head is shaved, and the hair is thrown under the bed of the children in the maternal [292] hut. The boy takes off his skin cape and ornaments and dresses himself

881 /63 cont./
[626] trample underfoot. The one now scorned had also wanted /64/ to
[152] regale guests with it on that day, but no one came to him whose son
showed himself to be a tŏrŏnō. While the old people, as long as
[535] there is something to eat and drink, are only interested in that, the
[533] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /Ill. 18 appears
here./

[158] The circumcised boys, soon after the completed operation, went
into the huts of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
blood, and meat. During the following period, until complete
[411] healing, they roam in small bands with bow and arrow -- they do not
[223] use the ordinary bows, but ones only about half as long, made only
for this occasion: the arrows used with them have a wax ball at the
tip -- through steppe /65/ and forest, in order to shoot small birds,
the skins of which they string by the beaks on a cord, which they
place garland-like around forehead and occiput. Between the bird
[301] skins the es sibolio (sing. os siboli) -- as the newly circumcised ones
[302] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay (en
doroto). On the first day they go out, they slaughter a white goat-
[262] buck on the steppe. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called ol
gĭne l ol benek (ol gĭne = the goat buck, ol benek means the tree
with whose branches they make the fire). Every evening after their
excursions they return to the kraal and to the huts of their mothers.

881
591 As soon as the young girl, who until then has lived in the warrior
kraal in the most unrestrained freedom, concludes from certain

[TEXT CONTINUED ON PAGE 86]

/88 cont./
of the fight, or until one party remains the victor two or more times in succession. The fight assumes greater dimensions if the two duelists belonged to different lineages or even different tribes. Then

701 535 291

C. G. Schillings phot.

Ill. 32. Dance in the warrior kraal I.

701 578 682 [613] [614] [669]

the two lineages or the two tribes make war on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

[192] [926]

A war in which Masai stand against Masai is called ol arabal (pl. el arabali), not en djóre (n djorīn) as a war between Masai and foreign tribes is called.

701 574

/89/ In peacetime the warrior spends only the least time in his own kraal; for the most part he gads about on visits in neighboring ones, often several days' march away. Never may all leave the kraal together in peacetime; a guard of at least ten men always remains at home for the protection of the girls and the livestock, while the rest stop to visit at an ol bul (forest meal, see p.111 above) or with other people.

[Warrior Kraal]

512 /89 cont./
701 Life in the kraal begins at sunrise, when the mothers and the
462 girls start milking the livestock. Not until around seven o'clock,
[233] when the boys drive the livestock to pasture, do the warriors get up
[234] to take the first meal (en daã e dadegenja = food in the morning),
[224] consisting of fresh milk. Then the women apply themselves to the
[272]
[262]

701
535
291

Ill. 33. Dance in the warrior kraal II.

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en daã e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (eñg ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (os siñgólio) under a nearby shade
tree. For this a row of warriors stands opposite a row of girls. The
former dance in place by slightly lifting the feet and bending the

[Warrior Kraal]

/90 cont./

512 knees. The row of girls moves forward up to the warriors with short,
• 535 stamping steps, bending their knees and swaying their upper bodies.
701 As a rule the dance ends when each girl whose lover is absent ap-
[836] proaches one of the dancing warriors in short high-jumps. This is an
[832] invitation to a rendezvous, which the one concerned answers in
[533] similar fashion as a sign of consent. The dance is always accom-
panied by singing. Shortly before sunset all return to the kraal.

701
535

Ill. 34. Dance in the warrior kraal III. 1/4 C. G. Schillings phot.

512 Soon afterwards the livestock returns home, and, after it is milked,
701 the people take the evening meal (en dai̇ e téiba = food in the even-
[234] ing), again consisting of milk. After that the dancing of warriors
[264] and girls begins anew on a small open place in the kraal, close to
[272] the entrance, and is interrupted only from time to time in order to
[535] moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234

1/A, [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

/90 cont./

512 before the milking is finished, then the calves are allowed to go to
[234] the cows for about an hour, and finally /91/ the former must again be separated and shut up, so that there will be enough milk in the morning. At ten o'clock it becomes quiet, the people retire into the huts, except for the boys who lie down to sleep on the ground beside the goats.

136 The silence lying over the vast steppe is broken only now and then by the howl of the spotted hyena (Hyaena crocuta), reminiscent of the whistle of a siren, more rarely by the hoarse laughter of the striped hyena (Hyaena striata and Hyaena Schillingsi). Sometimes
825 the roar and growl of a lion can also be heard, and if the latter slinks about silently sometime, one becomes aware of its approach

• 535
701

Ill. 35. Dance in the war camp IV.

825 by the behavior of the cattle: they snort, stamp, and crowd together, or race wildly through the kraal. Then a number of women immediately hasten out of the huts, in order to drive away the beast
000 of prey by shrill, trilling cries (ol gijoi). A few intrepid warriors also

/141 cont./

301 In order to make the ears suitable for holding ornaments, their
304 lobes are pierced in early childhood with a strong acacia thorn and distended by the insertion of longer and longer wooden plugs. The
[824] plugs (Figs. 43 a and b) are mostly made out of the wood of the
[531] eń gadardar tree (Ochna Merkeri Gilg), often quite beautifully marked. The weight of the ornaments enlarges the holes still more, so that they often hang down extended ten centimeters. At the same time the upper edge of the ear is also pierced in one or two places.
301 In these the women wear bunches of four to eight small chains to 20
[237] centimeters long (Fig. 44); the men wear just as many el oimer
[136] (sing. ol oimeri), a clock-key--shaped ornament made out of tin (Figs. 45 a and c) or out of brass wire (Fig. 45 b), often also a pesa on a wire ring, a polished mussel shell, which ornament /142/ is called eń jili (n jil) (Fig. 46), or a wooden stick 15 centimeters long (ol beniet, el beniata [Fig. 47, upper part]), or a quill of the porcupine (oiaiai or oeai, Hystrix africae-australis). Around the lower part of the enlarged ring of skin of the ear lobe the men wear a tube four centimeters long (ol gissol, el gisso [Fig. 47]), wound out of thin iron wire, /Figs. 47-51 appear here/ whose end coils are wrapped with copper wire, while on the rest of the coils usually hang small chains 6 to 20 centimeters long (ol bisiai, el bisia). If these are only short, they are as a rule glued together with red paint (Fig. 48). In place of this ornament one also often sees an oval,
[824] perforated tin disk (eń goholai, ń gohola) and other things, or a nut-shaped ornament that /143/ is carved out of the nut of the Hyphaena palm (Fig. 49). Married women and old men wear, tied in the ear lobes with a thin strap, the large double spirals (e (e surudiai, surudia) made out of thick brass wire. They are supported by a leather strap put over the crown of the head, since, because of their great weight, the ear lobe is unable to do so. It is
[531] regarded as particularly beautiful if they are further decorated with a leather band sewed across them and stitched with four rows of small beads, on which hangs a row of small chains. This decoration, which, incidentally, is found only among women, is called ol
[535] giriengata. For dancing, young girls often wear a string of beads (Fig. 50) around the forehead and occiput, or two strings of beads lying one above the other an inch apart (Fig. 51), which are joined, ladderlike, with small chains. The ornament is called er naitule.

[TEXT CONTINUED ON PAGE 189]

561 Soon after the *endungare* ceremony, the elders take three or four of their charges to visit the "medicine man." They take with them three or four new gourds as presents for the "medicine man," who is called *ol-oiboni*. They must also take with them the bark and root of a tree called *imokongoro*. I have not been able to identify the tree; [824] it is said to be scarce and is not found in the Loitokitok area. The root and bark are ground to powder and used to make a medicine named *emasko siroa*, an ingredient used in the preparation of a wide variety of charms. The elders inform the "medicine-man" that they have broken the fire-stick and present the boys to him and say "*Ol piron lang ellr, hiro nalo*"—"This is our fire-stick, we are one."

561 624 On their return home the boys' leaders seek one of their number to appoint as their spokesman called *Ol ai gurenani*. They make no special efforts but during the many debates, to which they devote much time, they note those who show special ability; but ability to ● [537] speak well is not in itself sufficient; there are other considerations of far greater importance.

There are certain families whose sons must not be chosen for they would certainly die if elected; again, the counsel of other families has an evil reputation and must be avoided. Nor would it do to select a spokesman from the *Endipogi* or medicine-man section or from the clans reputed to be unlucky.

The ideal *l'aigurenani* is one born of Masai parents in Masai country of a family from which *l'aigurenak* of former age-groups have been chosen. He should be wealthy if possible and a member of a lucky clan, must be energetic, not given to favouritism, and known to be fond of his tribe. That he should be an outstandingly good speaker matters not, provided that he satisfies the other conditions. It is said that his efficiency in debate will improve after he is appointed.

The names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves. It is particularly a matter for the leading boys of whom there are probably several by this time. [554] They are called *ingopior*, and are those who have shown ability and strength of character during the many debates already held.

Usually a *l'aigurenari* is chosen from among these *ingopior*. They discuss the matter secretly amongst themselves sending off one of their number on some pretext in order to be able to discuss him freely. When a decision is made the boys call some of the *il-piron* elders and send for the boy chosen. When he comes the *ingopior* say to him: "*Iye kiatas ol'aguenani*"—We make you our *aiguenani*. If he

which have a strong stimulating effect. The rest of the meat, roasted at an open fire, is then eaten by each ol gilat in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest forest meal takes place as a rule in the month kiptiti. Since the pasture is poor then, the livestock gives so little milk that the warriors sometimes live for a whole month on almost only meat.

701
537
[293]
[237]

At the head of the warriors of a kraal stands the speaker (ol aigwenani or ol aiokani). The badge of his office is an especially beautifully worked club or rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southeast of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a baton in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. What the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

816

[Warrior Kraal]

/86 cont./

701 speaking, yet their facial expression usually remains unchanging,
• 537 neither agreement nor difference of opinion may be read into it. The orator is not interrupted any more than he is forced to become silent by the restlessness of the listeners. Each one is allowed to deliver his speech unhindered to the end. We have here the simple flowing speech, in contrast to the dialogue type of the Hagoes, where another respected man stands or squats opposite the speaker and at every punctuation pause, at every comma of the speech given jerkily in choppy sentences, makes known by an unbelievably stupid-sounding, more or less grunting E, $\frac{e}{\ddot{e}}$, or hm that he has understood the words spoken. The task of the speaker consists chiefly of arousing, by means of a feigned friendship with the chiefs of livestock-rich peoples, in the latter a blind confidence in the Masai, /87/ which
701 will facilitate for the latter a sudden, predatory attack. Moreover,
726 he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether he perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most livestock might be, where they pasture,
701 where they stay at night, where the fewest warriors live, etc. The
[554] speaker himself need not be a brave warrior: rather, cunning, deception, guile are the characteristics that qualify him for the political aspect of his office.

Another task is the administration of justice incumbent upon
[692] him: he is the deciding judge in civil and penal matters for the warriors of his kraal.

701 A leading role among the warriors is played, furthermore, by
554 the ol oiboi (1)

FL12 Masai FL12

the case with the Gallas, Somalis, and Abyssinians (who are rapidly encroaching on the Protectorate), and probably with the Bahima. It also seems probable that the physical type of these races (Masai, Nandi, Turkana, Dinka, &c.) represents a mixture between the negro and some other factor. It does not seem to me possible to make any definite statement as to what that factor may be, but the neighbourhood of Egypt and Abyssinia renders several hypotheses plausible. Baker states that the appearance of the Latuka (who are probably the closest allies of the Masai) points to a Galla origin, and that there are Gallas on the east bank of the river Chol only fifty miles east of Latuka, which they have often invaded. It may therefore be that the Nilotic tribes, and possibly also the Hausas to the west, represent a hybrid of the negro and Galla.

There is absolutely nothing to show when the Masai moved southwards, but the traditions reported by Mr. Hollis (p. 264, &c.) seem to place the earliest history of the world in an East African setting, and convey no hint of an earlier home. The chief characters in these stories are the Masai, the Dorobo (hunting tribes), and the Bantu (Meek), and the principal event some arrangement by which the Masai obtain a right to all the cattle in the world. This seems to indicate that they must have been a long time in their present haunts, and have lost all remembrance of their origin. Some of the proverbs, such as 'The zebra cannot change his stripes,' and 'Mountain does not meet mountain,' have a familiar oriental ring; but it would be unsafe to speculate how they came to Masailand.

A very different view of the past of the Masai is suggested by Merker's recent work (*Die Masai*, Berlin, 1904). He regards them as belonging to the same stock as the ancient Hebrews, and quotes a great number of traditions respecting the creation, deluge, ten commandments, &c. which resemble the Biblical and Babylonian versions of primitive history. A critical examination of these stories is very desirable, as one cannot help suspecting that they contain elements borrowed from Christian or Mohammedan sources. On the other hand, in all questions affecting the origin of East African races, our only data are the most recent types of physique, religion, and language, and we cannot, as in the case of more civilized nations, go back two or three thousand years with comparative certainty. We can form no idea of how many strata of population such a period would represent in Africa; what mixtures and disruptions of races it would include.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

If he

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

3. The second way of forming the possessive case in conjunction with the article is to place the governing word after the governed, the article of the former being at the same time twice expressed, once before the genitive particle, and once connected with its substantive. This form is mostly used when it is wished to put special stress on the genitive. If no ambiguity is likely to occur, the governing word may be omitted, the first article, however, being retained.

The following example is taken from the story of the ostrich chicks: N-ē-urē-yu 'l-aigwenak pôkin ē-jo 'n-e-'sidai 'n-gera, n-ē-jo 'n-o-'l-ligatuny. And the counsellors all fear to say the-of-the-ostrich the children, and they say the-of-the-lion. [539]

The Local Case.

There are two ways of forming the local case, which is used where a preposition is required in English.

The first is employed with substantives not joined to the article, and with pronouns and other parts of speech; the second is used in connexion with the article.

1. The regular method of forming the local case is by prefixing the particle *te* (*ti* before words commencing with *a* or *o*) to the governed word. This particle is invariable:

E-ita-u-o te-kulle, he took it out of the milk.
E-ton ti-aulo (he is sitting down in outside-the-kraal) } he is sitting down outside.
or
E-ton te-boo (he is sitting down in outside-the-hut)
E-tō-niñg-o ti-atwa a-jo e-tu-puk-u-o eñg-gōlon te-ninye, he felt in himself that his strength departed from him.
E-ti-aka ōbo te-lello a-jo, one of (*or* from) these (men) told him that.

2. The particle indicating the local case used in conjunction with the article is formed like the genitive masculine particle, the only difference being that *t* is employed for *l*.

In other words, *o* is added to *t* when the word governed is masculine singular, *a* when feminine singular, and *oo* when masculine or feminine plural.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Districts.	Sub-Districts.
	'Mōwarak (the horns), Lo-'sokonoi (of the cassia tree), Kilepo (watering-place), Ol-osira (the-which-is-decorated), Naiñgasya-ōwarak (which astonishes the beasts of prey), Kipulul (place of many springs), 'N-gujuka (the axe handles), Ol-ñgelata (the plain between two hills), Sighirari, 'L-oita, 'Ng-orighaishi (the small stools), Ol-oitokitok (the bubbling spring), Il-Komōlo, Kitēto, Il-ketu-'m-beine, Salei.
'L-uasin-gishu[1] (the striped cattle).	'L-uasin-gishu oorook (the black striped cattle), 'L-uasin-gishu oonyokyo (the red striped cattle).
'L-Aikipyak[1].	Kimiri (pursuers), Marikōni, Il-meruesh-'n-dana (those who are not thrown down by roots), Sekin, Lo-'l-purkel (of the lowland), Le-naibor (of the white thing), Il-memonyōtu, 'L-alikinani, 'L-ooibor-oiñgok (the white bulls), Loo-dōtwarare, Il-marmar, Lo-'sekelae, 'L-aringon, Eng-añg e-Lema (Lema's kraal), Il-loijo, 'L-aisi.

When the article forms a part of the above names, the vowel is omitted if it follows a word ending in a vowel.

Alo 'N-aiposha	I go to Naivasha.
Alo 'L-oitokitok	I go to Loitokitok.

The Masai reckon time by 'ages' or periods of about seven and a half years. The following account of the Masai ages is given in the words of the Masai themselves.

Eata 'l-Maasae 'l-porori lenye.	The Masai have what they call ages.
Memurati 'n-gera te-'wāji nēbo. Eduñg śitaa 'l-porori, metushuli śitaa ol-poror ōbo, amu merisyoro pōkin; emurati 'l-kituak, nepali 'l-ooti metubulu.	Children are not all circumcised together: they are divided up into ages, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (i.e. until they reach the age of puberty).
Ore lekwa kituak ooiteraki samurat nēji e-murata e-tatēne,	Now, those who are circumcised first belong to what is called the

[1] Owing to cattle plague, disease, and civil wars, the Masai occupying the Uasin-gishu and Aikipyak districts have practically ceased to exist. The remnants have been scattered and mixed with other tribes.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

561 539 naa ol-poror ōbo illo. Netoni 'l-ooti. Ore pe ebulu, nemurati ai ninje, nejiñg illo-poror.

right-hand circumcision, and that is one age. The younger ones wait and are circumcised later. They also become members of this age.

Ore 'l-ooitōkīni aamurat te-kurum, naa likae-poror illo, nēji ninye e-murata e-kedyanye. Netoni sii 'l-ooti, nemurati si ninje, nejiñg illo-poror.

When the next circumcision festivals are held, those circumcised belong to what is called the left-hand circumcision, and that is the next age. The younger ones wait as before, and when they are circumcised they likewise join this age.

Ore 'l-porori aare ēji ol-aji ōbo.

Now, two ages are considered equivalent to one generation.

Ore ti-atwa ol-poror ōbo nēoriori kat'-uni: etii ''L-chañgen-ōpir,' netii ''L-tareto,' netii ''L-paringōtwa lañg.'

Each age has three divisions, first, those known as 'The big ostrich feathers,' secondly, those called 'The helpers,' and thirdly, those known as 'Our fleet runners[1].'

561 805 Il-porori loo-'l-Maasae oodamuni taata. Masai ages which are now remembered.

E-murata e-tatene (Right-hand circumcision).	E-murata e-kedyanye (Left-hand circumcision).	Approximate data.
Il-Kinyōyo		
	Il-Tapari	1791 1799 one generation.
Il-Kigiriyo		
	Il-Kisalie (the people of the plain)	1806 1814 one generation.
Il-Kupai (the white swords)		
	Il-Kimirisho (those who drive away)	1821 1829 one generation.

561 881 [1] When permission has been granted to hold the circumcision festivals (*vide* p. 296), one feast is held in each sub-district every year for four years in succession, and all those circumcised during these four years belong to the right-hand circumcision. An interval of about three and a half years then intervenes before another festival is held. All youths circumcised during the next four years belong to the left-hand circumcision. As an instance, a man born in 1872 would either belong to 'Our fleet runners' of the Il-Ñgarbut age or to 'The big ostrich feathers' of the Il-Kipōni age, i.e. he was circumcised in 1885 or 1889. Boys as a rule are circumcised when they are between thirteen and seventeen years old. Orphans and the children of poor parents frequently wait until they are twenty.

Songs.

A prayer to God[1]. 782 844

Masai women do as follows when one of their number gives birth to a child.

They collect together and take milk to the mother; they then slaughter a sheep, which is called, The purifier of the hut, or simply The purifier.

The women slaughter the animal by themselves, and eat all the meat.

No man may approach the spot where the animal is slaughtered, for it is considered unlawful.

When the women have finished their meal, they stand up and sing the following song: [539]

[1] Masai women often pray twice daily. Men and children usually only pray in time of drought, or when a cattle plague is raging.

Maagor e-swaate,

Ol-chōni musana
Oiyeki 'n-guruon.

When there is no rain the children sing as follows:

Solo. Rain, fall!

Chorus. That the hide does not choke me,
The old skin
Which takes away the ashes.

Free Translation.

I

Come rain, and bring
Fresh milk to me:
Which I'll not get,
Except through thee.

II

I almost choke
On that old skin
That 's used to rake
The ashes in.

III

For when there 's drought
Hides old and tough
For children's food
Are thought enough.

Warriors' songs.

When Masai warriors kill barbarians in a fight, they paint the right half of their bodies red and the left half white. [302]

The comrades of those who have killed some of the enemy then sing their praises.

The following is an example of their songs:

Solo. The pig-tail on the top of your head
Is about to be seized
When you remember the kraals,
Chorus. O warrior son of Ol-Parun.

Free Translation.

Son of Ol-Parun,
Mighty in battle,
Dost thou remember
The kraals and the cattle
We took from the foemen,
What time in thy daring
We scarce held thee back by
The plaits thou wast wearing?

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

727
539

Ejj ali kulikao-repoto. The following are other examples:

Solo. Ol-le-Langpi, el-murani ólo, 'l-mentetana
Lotukuyaaya. (*Chorus*) Ee-dripa naito lepoto.
Solo. Aje-ele. (*Chorus*) Kolikajita! (*Solo*) Kat'-uni to-'l-epa ilo.
Chorus. Arai le-'ag-ang'ang' ailadoli 'N-Jiwaine'.
Nakuitki en-kwete le-Kimar'[2] ilkerere.

Solo. Ol-le-Langpi, the warrior who has reddened the ground with the blood
Of those whose country had not been reconnoitred.
Chorus. Who ran on ahead and returned in the evening to the van.
Solo. I tell you he has killed. (*Chorus*) How often? (*Solo*) Three times in one month.
Chorus. The cows with the crumpled horns which were shown to Ainsworth were in the kraal.
We captured them because he climbed to Kimare to take the place of those who had retired.

Free Translation.

I

Sing we the praise of that foremost of fighters,
Ol-le-Langpi, whose spear was ne'er wielded in vain,
Who spied out the land for our warriors advancing
And made the ground red with the blood of the slain.

II

Slumbered the foemen unwitting of danger,
Though we knew not the country, we felt no dismay,
But a bitter awakening was theirs in the morning
When thrice in one month then their bravest didst slay.

III

Mighty the spoil from the kraal that we captured,
The herds of horned cattle we drove o'er the plain.
To Ainsworth[1] we showed them. Thine, thine is the glory,
Ol-le-Langpi, whose spear was ne'er wielded in vain.

[1] J. Ainsworth, Esq., C.M.G., H.M. Sub-Commissioner, Ukamba Province.
[2] Kimare is the Masai name for a district in Kikuyu.

Solo. Eina eng-orí e-'a-gitedg naiitutiigé,
Chorus. Nikiré 'a-gujak, Mokoto ledg tenpuka.

Solo. It came to pass that we heard the lowing of the kine,
Chorus. He ran (until he captured them), our Mokoto of the splendid shield.

Free Translation.

Mokoto of the splendid shield
Hath heard the lowing of the kine:
Soon shall their teeming udders yield
Rich store of milk for me and mine.

Solo. Eina kutoko 'l-Marakgs[1] ee 'l-Makindara[2].
Chorus. Tipika ol-le-Parmet ol-lughanya e-'m-bwata.
Solo. Ehaiye mainra ol-pile lai eng-epite,
Chorus. Eina kinyotitá eng-ej'-ada, nado 'l-enita.

Solo. The people of Marangu and Moshi are in terror,
Chorus. Place the son of Parmet in the van of the fight.
Solo. When you did not kill anybody,
Chorus. We did not leave our hut, blood-red is our sign.

Free Translation.

Marangu and Moshi are cowering in terror:
Son of Parmet, go thou in the van of the fight.
If the foemen escape thee, at least we shall conquer,
With thee as our leader we'll never seek flight.
By our shields shalt thou know us, blood-red is our escutcheon,
The hosts of the Chagga shall yield to our might.
Marangu and Moshi are cowering in terror:
Son of Parmet, go thou in the van of the fight.

Solo. Ej' Ol-le-Tema e-ólai ada neita eiterí.
Chorus. Elle leita epikye ol-chikut lin' en-jangar.
Solo. Eina ol-chikut ólepa kitgurukini.
Chorus. Kido 'n-kiran ten enyiku en-jolitota.

[1] Marangu is one of the Chagga States on Kilima Njaro.
[2] Mandara was a great chieftain of Moshi, one of the Chagga States.

Solo. It is said the son of Tema has an ostrich feather head-dress which has not been worn.

Chorus. I did not refuse to give you the credit of killing the herdsman.

Solo. They are seeking a stronger herdsman for you now.

Chorus. You killed another by the doum palm as we entered the country.

Free Translation.

When Tema's son first donned the ostrich plumes—
The manly dress that marks the warrior's pride—
Two foes he slew before the raid was done,
And in their blood his maiden spear was dyed.
The first was in the border marshes slain
Beside the palm-tree, next the neatherd fell.
Sendeyo seeks a stronger herdsman now
To guard his kine 'gainst one who fights so well.

EN-GUMPANA

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Thereupon we infer that the function of the age-unit is primarily social. Its scope is to organise the initiates into a corporate body, separate and distinct from other similar bodies, and to lead them, both as individuals and as a corporate whole, towards a full social and economic independence and towards taking a full share in political life.[100] 561 182

IX – THE CEREMONIES FOR THE INSTITUTION OF THE AGE CLASS

The institution of the age class is brought about by the performance of some special ceremonies, of which the most important is the *ugokerr* proper. Before this takes place, other ceremonies, such as "the slaughtering of the ox with jousting" (*ol geten I ol baa*), "the *ugokerr* of milk" and "the *ugokerr* of meat", must be performed by every initiate. Through these performances the initiate obtains the status of an elder. The *ennoni* is the forerunner of all his age-mates. As was seen, at *Uwoto*, he is given the status of an elder, and soon after that he settles down as a married man. 561 [884]

LEAKEY,[101] states that a warrior (i. e. an initiate) who marries cannot have sexual intercourse with his initiated wife.[102] FOX,[103] [illegible] "hypothetical, and does not occur in practice", because usually the senior initiates marry after the *ugokerr* of milk.

MERKER,[104] is our only authority for "the slaughtering of the ox with jousting". The ceremony consists in a meat festival offered by the candidate to the elders of the neighbourhood of his father's village. Other initiates share the meat, but eat apart being still under the restrictions of junior initiates. A mock fight follows in which the initiates and women take part. Finally before the sun sets, "a married man with his chief wife comes near to their host and addresses him with the following words": [539]

[100] Each unit seems to be distinguished from the other by its peculiar songs. FOX, l. c., p. 484, states that almost all of these songs are in a "rather cryptic language". [533]

[101] LEAKEY, l. c., p. 306.

[102] LEAKEY was somehow misled in his information; he also states l. c., p. 194, that "the actual transfer from the senior warrior stage to the Elder's stage takes place without any ceremonial", which is not correct. [114]

[103] FOX, l. c., p. 483.

[104] MERKER, l. c., pp. 102 ss.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 "I say, thou art no longer *ol moran* (a circumcised, a warrier),
[539] but *ol morou* (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks MERKER, "it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in
[591] his father's kraal or in the warriors' kraal (*manyatta*) until all his age-mates have married. Only then he is recognised as *el moruo*;
561 each one builds his own kraal and lays aside the clothes, decora-
554 tions and the pigtail of the warriors".

It is evident that the effect of the ceremony is rather limited.
[582] It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognised" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

561 A very detailed description of "the *ngeherr* of milk" is given by J. V. DAWSON, but the ceremony is mentioned also by other authorities. FOX,[155] states that "this ceremony is performed by each warrior individually",[156] and DAWSON tells us that it occurs in the village of the initiate's father and that four *piron* elders take a special part in it.

[535] The ceremony is preceded by a dance. The candidate is clothed
[392] in women's clothes and the first two of the elders place women ear-
[301] rings (*surutya*) on him.[157]

A test follows, in which the candidate is expected to confess
[183] how many times he has "stolen milk", i. e. taken milk by himself
[685] or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" at this

[155] FOX, *l. c.*, p. 453.

[156] He says also that "the ceremony usually takes place nowadays a year or two after the *E-unate* owing to the Government policy of reducing the period of warriorhood as much as possible".

[157] These ear-rings, *surutya*, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a femine type.

561 herds. They are followed by the moran and the women who cut bush to mark where the elder has walked. When the circle is demarcated, they set to work to build a thick thorn fence to enclose the village. By the time the work is finished, it is evening. A special piece of [824] olive wood is brought in readiness. The log used in a recent ceremony is described as being four to five feet long, and of the thickness of a man's thigh. It had been part of the trunk of a tree, not a branch. A tree leaning in the direction of the rising sun had to be found. When it was cut, it had not to be allowed to fall to the ground.

In the evening before the cattle return, the olive log is brought and one end is placed in the fire. The wood is ——— and as the log burns away it is pushed further into the fire. The mothers of the morans each come with four small pieces of olive wood to light at the fire; this they take to their temporary hut made of hide to start their fires. No other source of fire may be used. Great care must be taken that the log is burnt completely. A close guard is kept over it to prevent the cattle from disturbing it and to prevent evil-wishers from taking away the log to make black magic. The morans guard the log through the night and the morning.

In the morning all the morans come and form a circle round the [714] fire; they bring their spears, and wear lion-mane and head-dress. Four elders of known good character, with wives and children, then walk round the morans; two walk one way, two the other. One of each pair has a gourd of milk, the other a gourd of honey wine. As they walk they fill their mouths with milk or honey wine and blow it on to the sitting morans.

561 Each girl has a slipper of green grass which when removed is held in the left hand, the gourd in the right. As the liquid is sprayed, ● 539 so is the green grass waved toward the moran. As they walk the 782 elders call down the blessing of the *Engare-Narok*.

Be trustworthy! Oh return safely! O God.
Become ye ours and of God.
May the illnesses pass you by.
Wish those who hate us, that they may find dry rivers on their journeys.
Lenana and Sufeit and Mbatian wish thy safe return!
Grow up! Become possessed of wise heads!
Become as great as Kilimanjaro!
Be the father of my children; be fathers of boys and girls,
Be fathers of children, and bring them up well!
Have many wives!
May God love you! May the moon love you!
Be as sweet to us as milk and honey.
May the red bull of the night guard thee,
May our age be the bravest.

As soon as the prayer is finished the warriors rise and disperse. Later they reassemble and celebrate the founding of their age by dancing and singing. Thus is a new Masai age founded. Henceforward the warriors live apart from the rest of the tribe. 561

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

56 Prior to the meat *Ol-Ng'esher* the men must eat meat in the forest or bush.
[264] They build a small round stockade, called *Ol Pul*, of thorns with one entrance about
[343] 2 ft. 6 ins. high through which one must crawl. Here they store the meat, and sleep. They may eat the meat either within or without the *Ol Pul*. There is a picture of an *Ol Pul* opposite p. 292 in Hollis.

[252] The meat is pierced by a wooden spit about 18 ins. long. This is stuck in the ground by the fire and the meat is toasted. Soup is also made of fat and water and the bark of *Il Kitoloswa* or *Il Kiluretti* trees. The decoction of these barks
[276] makes the warriors fierce. They also ascribe to this cause the curious hysterical
[158] fits into which they frequently fall when excited. I can vouch for the *Il Kitoloswa*, small doses of which do, in fact, produce a fierce and unbalanced state of mind. I have never tried the *Il Kiluretti*.

561 When the warriors sleep in an *Ol Pul* they pray to God at sunrise on behalf
782 of their age-group. Each one takes his skewer and rubs it in the ashes of the fire
539 in the *Ol Pul*. He then goes out of the entrance and strikes the sides of it and walks towards the East reciting his prayer and striking trees with the skewer. While
[533] returning he sings the war song *Eng-ipolossa* of his age-group. As he re-enters the *Ol Pul* he thrusts the skewer into the thorns at the entrance on his right and leaves it there. There are nearly always a bundle of skewers to be seen in this position.

The prayer is as follows :—

"*Na Ai aatomono atabukua olemeänikino enkila etabukutua linono lemaar il ogarak ol lughunya. Na iye Eng Ai aatomono injoki iyook ingishu naang'ang'unyi. Nan iye Eng Ai naatejo Na Ai taänyiki iyook ol poror naa ol kilo. Naa iye Eng Ai naatejo injoki iyook nemear il ogarak il lughuny otabukua il omunyak neinguaa kulikae omunyak nemear il ogarak il lughung. Aatomono Na Ai uasen ai engolong meilepu t'ol ondolu tangoro iyook il tiil-omunyak.*"

Here is the translation :—

"O God I have prayed Thee having come out hither with my garment unbound. Thy (warriors) have come out here, let not wild beasts hurt my head. And Thee O God I have prayed give us the cattle which prosper steadily. And Thee O God I have prayed bind together for us the age-group in one garment. And I have said to Thee O God let not the wild beasts hurt the heads of the fortunate ones who have come out here and let them not hurt the heads of other fortunate ones who come from far away. I have prayed Thee God, my beloved, when the sun rises from the valley, strike thou us with the rays which are lucky."

Each age-group has a different song. The song of the Il Kitoip is "*Tangoroki*
[533] *iyook t'alema tauwa neduru indonata o asurai nemetii ol morani le sayet elobi.*" I cannot translate it because, like other Masai songs, it is couched in rather cryptic language.

854 the ground. The father almost never carries the child on his arm, but only picks it up now and then /53/ for a moment. As soon as the child cries, even at night, the mother, or in her absence another [533] woman, gives it the breast. If this does not help, one tries to quiet the little one or lull it to sleep by rocking it in the arms or by sing- • 539 ing. One such familiar lullaby is the following: oh, jejai, tobolo l 854 airorié baba telai l eńg an ai kitok ai; in free translation: Oh, you 533 my little rascal, I say to you, grow and become big in my big kraal. Another song, which, like most songs, first originated during the singing and refers to recent events, runs roughly: "What then do these El mulelyan want here (two women belonging to the tribe of the El mulelyan were standing nearby), they who did not bring the woman in childbed (that is, in this case, the woman singing the song) anything to eat? The Mulelyan are fools because they are not pleased about the children. In the future the woman in childbed will have to sit down in the shade in order not to feel so hungry, or she will /54/ have to ask for food in the kraal of a warrior who brought home booty from a war against the El datua." In the last words there is mockery insofar as the brother of one of the two El mulelyan women, along with other warriors, had been recently driven back by the El

1. The Masai give this name to the inhabitants of the Umbugwe area on the southern end of Lake Manjara.

during an attempted livestock raid.

861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, the mother -- and, to be sure, only she -- strikes the child rather [292] lightly on the training surface with the belt that she wears after each confinement.

855 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aetiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

701 /104 cont./
182 a little while, will then lead them farther. Otherwise they leave it
222 the rest.
[825] When the warriors of an ol boror notice that their bones are
701 getting old and the el barnot surpass them in strength, they agree
561 that it is now time to think of marriage. After they have obtained
582 the permission of the speaker and then that of the chief, one after the other leaves the warrior association, each one shortly before his
701 wedding. He announces his retirement by means of a feast, the ol
561 geteñ l ol bāā, that is, ox slaughtering with a tournament. To this
574 all the inhabitants of the nearest kraals are invited and are shown hospitality with the meat of one or several head of cattle. As soon as these are killed, each warrior cuts off a piece of meat for himself and devours it behind a bush standing somewhat apart. Then each of those present receives his share, while the remainder is strung on sticks two meters high. For these the warriors fight with the girls and women in a game in which the latter vigorously swing the sticks, before which the former has more fear than the women, somewhat
[526] accustomed to beatings. Then the younger ones amuse themselves and play, for instance, tag (tosudja). Before there is thought of de-
[539] parture, about five o'clock in the afternoon, a married man and his principal wife go to the host and make the following speech: "adjogi megur' ira ol morāni dada it' ol móruo, iñora ñ gischu inonu, ñ gera inonu, iñora naleñ, tabala 'mbaa el móran, idà tada ol móruo, tabala n dogitin bāgin el móran, ida tada ol móruo"; in translation: I say, you are no longer Ol morāni, but Ol móruo, take care of your cattle and your goats and sheep and watch over them well, leave the occupation of the warriors, now you are ol móruo, refrain from all things of the warriors, now you are ol móruo.

701 After this feast it is up to the warrior whether he takes part more
561 or less regularly in the expeditions of war. As a rule he soon marries
[582] and lives with his wife either in the father's kraal or in the warrior kraal until all his contemporaries are married. Only then are they
[591] considered ol móruo: each one builds his own kraal and removes clothing, ornaments, and braid of the warriors. He is now at the end
[145] of the twenties, his best strength has been spent. In general the Masai, just like all members of the black race, spend their lives very quickly, they age early, without ever attaining a really advanced age.

18: Merker--165 G-5 (1895-ca.1908) 1910 FL12 Masai FL12

/125/

533
539

In free translation the solo says: who is the leader of the red shields; oh, it is Meleta, who was wounded in the fetlock/Ger. Fessel/, so that his red blood ran into the "mońgen" (the fetlock ornament of Colobus skin); literally: who the leader of the red shields, oh, Meleta, who has taken out the blood from his mońgen.

832 For judging the beauty of the human body the people in general
826 apply the same principles as the European does.

The Masai idea of beauty calls for a well-built, slender body with slightly rounded forms. In contrast to most other black peoples, among whom corpulence is taken as the measuring stick for feminine beauty, a Masai beauty may not be heavy. Her limbs must show just enough roundness so that they do not appear angular. Further requirements for being regarded as beautiful are: oval face, white teeth, black gums, a skin color as light as possible, protruding buttocks

/209 cont./

796 782 [751] [237] participants eats a small piece of the meat, after he has roasted it in the ashes. Furthermore he is given a strip of the skin, from which he then fashions amulet rings, one for himself, the others for his relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the participants constantly sing:

[539] Hai narok, oho, Hai kindera ije, oh,
Hai narok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; aldog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 782 233 On the following day the women carry fresh cattle dung to the ashes and knead a mash from it, into which is mixed a medicine that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor i oñ gischu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

796 782 842 791 Another supplication feast is celebrated only by the married women in order to implore God to give them children. It is called iruga 'Ng ai ol adjo, i.e., may God hear the word. In or near the kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always: I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaÏn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a [272] [237] buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a [415] [824] white powder obtained from the ol oiboni, while they say the /210/ [539] prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 783 If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, [784] provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

Tales

Lion and Ichneumon

539 In ancient times men and animals lived peacefully side by side; only the lion would now and then cause discord by quarreling. This grew worse and worse; almost every day a child or an animal was missing and was not to be found again. No one knew where the vanished ones were staying. Then one day an ichneumon, from its hole in the ground, saw how a lion approached with a child in its mouth, settled down nearby, and devoured its prey. Meanwhile human beings and animals were so disturbed by the inexplicable disappearance of their children that they called together a great assembly. The lion was not afraid that its infamous deeds would become known, for even if it were to be observed at them, no one would dare accuse it, the mighty and powerful one. When all were assembled, an old man posed to the assembly the question as to whether anyone knew who the evildoer was. All were silent, until suddenly the thin little voice of the ichneumon made itself heard. "I know who it is," it cried, whereupon all present besieged it with questions. But the ichneumon answered: "I am so little that not everyone would hear me if I spoke; let us go to yon termite hill, I shall climb up and then name the guilty one for you." With that it sprang ahead and all followed. In the front row /222/ of those standing around the lion had stationed itself and looked at the ichneumon with a threatening glance, so that it would be silent. But the latter did not let itself become disconcerted and cried: "The evildoer is the lion." Scarcely were the words spoken when the lion

/222 cont./

• 539 pounced on the little animal, but it had already disappeared into a hole in the termite hill. By its rage the lion had shown that it was really the guilty one. The elephant and the rhinoceros threw themselves upon it before it could escape and killed it.

Hyena and Jackal

A hyena and a jackal lived together as friends in one kraal. Each of them had cattle, the hyena many, the jackal fewer. Alternately one of them tended the entire herd, and on the days on which the hyena was with the livestock one of the jackal's head of cattle disappeared each time. When the hyena had eaten the last of its cattle, it came home weeping and said: "When I led the herd to the watering place, your cattle suddenly disappeared in the water." The jackal, in disbelief, demanded that the hyena show it the spot. The latter led it to the banks of a pond, into which it had stuck the tails of the devoured cattle, and said: "You see, the tails of your cattle are still sticking out." Then the jackal wanted to pull the cattle out of the ground again: it pulled at the tails; one after the other it pulled them out. Then the hyena said: "The cattle are stuck too deep, you have torn off their tails." The jackal acted as though it believed this, because it was afraid of the hyena. Now the latter daily devoured one of its own cattle, while the jackal set out to buy others for itself. When it came back with a cow, the hyena had only one ox left. The next day, while it was pasturing the two animals, the cow dropped a calf. Upon arriving home in the evening, the hyena told the jackal, through whose apparent credulity it had become bold, that this calf belonged to it because its ox had dropped it. "Can oxen bring calves into the world? I knew only that cows do this," the jackal interrupted, incredulously. The hyena replied: "Does not God give cows the calves? Can not God do everything? Can not God also give calves to oxen? If you do not believe me, let us call together all the animals, who will settle our dispute." The jackal declared itself in agreement with that. Now the hyena summoned the large animals, the jackal the small ones. Of the latter, the birds settled in the foliage of the tree under which the conference was to take place, while snakes and

/XII cont./

• 539 similar animals crawled into the holes at the roots. The jackal now said to the elephant: "Elephant, you are the largest animal and can shout the loudest. Shout to the clouds and ask God to whom the calf belongs. God will hear you, he is everywhere, therefore also above us." The elephant shouted and a little bird hidden in the branches answered: "The calf belongs to the jackal." Then the latter spoke again: "Elephant, now shout /XII/ downwards also. God is everywhere, therefore also in the earth!" The elephant did as he was bidden, and a concealed snake answered: "The calf belongs to the jackal." The calf was now awarded to the latter by all the animals, because God had awarded it to it.

The second part, in which a weak animal dupes a mightier one, is repeated in several fables.

Hyena, Jackal, and Monster.

A hyena and a jackal lived together as friends in one kraal. Every evening the two set out to plunder. The hyena never came home until daybreak and usually still hungry, while the jackal returned after only a few hours, having eaten his fill. Now the hyena wanted to know the place where there was such abundant food and asked the jackal about it. The latter replied: "Every evening I look for an ash heap and rub my muzzle in it, that is what makes me so quickly satisfied and fat." In reality, however, the jackal had one day met a monster (ou diamani or tiamani) that devours human beings and animals. It had crept after it and observed how a rock wall that it approached opened at its calls "Rock, open up" (ou mid hollo), whereupon the monster disappeared into the rock, and the latter closed after it again. Then the jackal lay in wait nearby, and after the monster had come out again, it cried: "Rock, open up." When the rock opened, the jackal went in and found a big cave in which lay huge piles of meat and bones. Now every day it went there, where it was able to satiate itself both quickly and effortlessly.

• 539

/539 cont./

The hyena had followed its advice and returned with a muzzle colored white with ashes. It did not feel satisfied, but, indeed, because of its appearance it had become the laughingstock of the other animals. This annoyed the jackal's companion; it took it along in the evening and led it to the cave. When it was satisfied, it asked the hyena to go home with it, but it did not want to. So it told it the formula with which it could open the rock. The hyena, however, was so busy eating that it only half listened, and then when it was ready to go, it did not know the magic words. Soon afterwards the monster came home and was very astonished to find the hyena. The latter told it how it had got in. The monster answered that it could stay, but would have to serve it. It should break apart some bones during its absence and with their marrow feed its child, which was lying in the back of the cave. When the hyena then broke apart the first bone, a splinter sprang from it into the head of the child and remained lodged in it. It tried to pull it out quickly, but out of carelessness pushed it in still deeper, so that the child died. The old monster immediately asked upon its return "Where is my child?" The hyena /539/ answered "It is sleeping." "Bring it to me," ordered the monster, and when the hyena made excuses and said "If you wake it, it will die," the old monster itself went to look and found that it was dead. Now it tied the hyena to a tree and then went off to fetch a stick and to thrash the murderess of her child. The latter screamed so, however, that all hyenas came running. One of them asked "Why are you tied up and who did it?" It answered: "I live with a monster that gives me too much meat to eat; I have been eating the whole day and now I am supposed to drink a big pot of fat. When I did not want this, it tied me up here; it will come presently with the pot of fat." Then the other replied "I have not had any fat for a long time. I shall untie you, then you tie me up in your place." Said, done. When the monster returned with the stick, it thrashed the strange hyena, but stopped when it had explained what had happened, and graciously took it in. A few days later the monster slaughtered many cattle for a great feast, to which all the hyenas were invited. When they had eaten their fill and the monster had proved to be an amiable host, it said with a friendly

/TS4 cont./

539 mother "I had taken one of you in as my child. It ran away and left me this one in its place. Though I also love this one here very much, I long for that one and should like to take it back." Thereupon the other hyena rushed forward and cried "Mother, here I am!" The mummer seized it, led it into the cave, and killed it there.

The Man-eating Bull

The largest cow in the kraal dropped a male calf. Because of its handsome coloring (it was spotted white, black, and reddish brown), it attracted everyone's attention. When the cow was milked, however, the hands of the milk women became diseased from it. All the women in the kraal tried it in turn, but none was willing to milk the cow a second time. So the calf got all its mother's milk and became larger and stronger than the other calves. After it was full-grown it showed a rare confidence. It always nestled up to the herdsmen and the children loved to play around the handsomely spotted bull. One day, when they were playing hide-and-seek, the child who was supposed to look for the other later was stationed behind that bull. But the children in hiding waited in vain for the one who was seeking. Finally they went to look, but could not find it. They asked the bull, and the latter answered "It went home." There the children then looked further, but again without success. An old man had observed the herd from afar and had seen that the bull had devoured the child. He ran to the kraal and told the people that that bull was in truth a mummer (see discussion) and had just devoured a child. They therefore decided to move away immediately and leave the bull behind. /TS5/ During the night they loaded their belongings on the donkeys and departed secretly, leaving behind the sleeping bull with six head of cattle lying around him. In the morning eight strange warriors came to the abandoned kraal and wanted to divide up the cattle, but since there were only seven, the bull was awarded to two brothers. The younger of the two was particularly enchanted with the handsome animal and, during the march, did not leave its side. Suddenly he heard low, between its moan, the bull kept saying "Eight, eight, eight." That seemed uncanny to him; he thought, the bull may be a mummer. It

/238 cont./

• 539 may have just counted the warriors and was pleased because it would be able to devour eight warriors that night. He told the others his suspicions, but they laughed at him, the youngest, who was imagining impossible things out of fear. After they had arrived at their kraal toward evening, all eight of them lay down to sleep in a hut. During the night the bull rubbed itself against the hut wall, whereupon one of the warriors went out to chase it away. After a little while the bull rubbed itself again: a second one went out, and so forth, until only the two brothers remained in the hut. When the bull again scraped itself, the older of them wanted to go out. The younger one warned him and said: "The bull is a monster, it has devoured the others and will devour you, too, if you go out to it." The older one, however, did not believe him, but went and did not come back any more than the others. Now the younger one made a hole in the outer wall of the hut and thus escaped. He ran to another kraal and brought back many warriors. They surrounded the bull, threw their spears and swords at it. In its panic the bull cried: "Do not kill me, just cut off my tail, then the devoured ones will come out of my body." The warriors, however, killed it anyway and carefully cut it open. Then the seven warriors whom it had devoured during the night came out: but the child whom it had devoured first was already dead.

The Sly Old Man

An old man possessed a large herd of goats that he himself tended every day. His goats were the fattest far and wide. They aroused the envy of all strangers, some of whom had succeeded in persuading the old man to sell one of the animals. However, his vigilance had made it impossible for one of his goats to be stolen from him. One day the warriors of a neighboring kraal arranged to steal a couple of head from him. There where the old man drove the herd along every day, there were several holes dug by wild pigs. One crawled into each of these and then covered himself with grass. The eyes of the old man, however, soon

/XXX cont./

• 539 spotted them. Smiling, he called out to them "My children, come and help this old man drive the herd together." Then they stood up and helped him. Put to shame by the guile of the old man, they decided to persuade him /XXX/ to turn around for a moment, whereupon they were going to stun him by a blow on the nape with a club. For this they appeared before him the next day in the pasture. One of them started a conversation with him, then suddenly turned around and asked the old man: "What is that bird back there eating?" "There?" asked the old man and, without turning around, pointed backwards with his stick. "I don't know!" "Just turn around," said the warrior; but the old man replied with a sly smile: "No, otherwise the bird will eat me too." Now they wanted to try it with a nocturnal raid. For this one of them crept at night into the old man's kraal, where the latter was keeping watch over his goats. Just as he was about to go off with a few goats, he saw the old man lying there with drawn bow, and feared the arrow at the next moment. He therefore screamed for mercy. Only now did the old man, who had been sleeping with bow and arrow in his hand, wake up. Again the warrior went off, unsuccessful and humiliated; again the young men found themselves outwitted and, because of that, humiliated. With cunning the old man was not to be got at, that had now become clear to them. So they decided to go over to force and to murder him. When he saw them coming the next day, he called to them: "My children, you will be hungry, look here, these two goats are particularly fat, take them and slaughter them at once." Overcome by this friendliness, they gave up their plan, but set to work immediately to conserve the goats. During this the old man drove his herd on with drawn-out [illegible] calls (one uses these otherwise not for herding, but only to call people to come). Astonished at this, the warriors asked whom he was calling. He replied: "No one, this is my herding call, to which I owe it that my goats are fatter than the others." The warriors believed him and calmly became absorbed again in their meal. Suddenly, however, the people who had hastened up at the call of the old man fell upon them and cut them down.

/226 cont./

The Worried Father

539 The warriors of a Wakuafi settlement wanted to make war on the Masai and for this purpose sent spies ahead. The latter returned with the announcement that they had found an oi hui place upon which lay roots of the oi oiorua tree. They concluded from this that the Masai were at the moment living only on roots and must therefore be greatly weakened. An old man, however, advised them and told them that it was precisely with these roots, which they cooked together with meat, that the Masai gained great strength. The young men, however, did not believe him and pressed further for war. In order to keep at least his own son from this expedition, whose unfortunate outcome he foresaw, he struck him on the knee with his club in such a way that he was unable to walk for a long time. The others went to war and were all killed.

/227/

The Wild Animals

539 825 Many, many years ago men and women lived in different kraals. The former had cattle, the latter used as livestock the wild animals, which at that time were still quite tame. One day a woman slaughtered a wild animal and then requested one of her children to drive the herd to pasture. But the child did not obey and first wanted to have some meat. Meanwhile the wild animals ran to the pasture by themselves and since that time never again returned to the kraal.

The Punishment of God

539 A poor Wandorobo widow, for whom no one cared, went to a Masai kraal with her two small boys, so that the latter, by tending livestock, would earn a living for her and for themselves. The man whose livestock the boys tended there took the old woman in. Soon afterwards a wife of this man gave birth to twins. The Wandorobo woman, who had hoped that the Masai would soon marry her, saw with discontent how he redoubled his concern for the young mother, and her jealousy of the latter increased to such an extent that she plotted her destruction. Thus, one day when the young mother left

/227 cont./

• 539 the kraal for a short time, the foreign woman stuck the two children in a large wooden pot and threw it into the nearby river, which carried it far away. Then, both hands full of cattle blood, she waited in the hut doorway for the mother of the little ones and, when she came home, smeared her face with the blood and ran out screaming, accusing the other one of having devoured her own children. When the people saw the blood on the face of the one accused, they believed the accusation. The man divorced his wife and inflicted on her the punishment that she was to tend his donkeys until her death. Then he married the other woman. Meanwhile the two children had been adopted by a distant tribe. Children who were playing on the bank had seen the pot arrive, caught it, and carried it to their father. There the boys grew up to be warriors. One day a war expedition was undertaken against the Masai and those two were sent ahead as spies. In the vicinity of a Masai kraal they found an old woman who was herding donkeys. Since it is not customary for women to herd, they asked her why she was doing this work. Then she told them the story of her misfortune and the injustice done to her (1).

1. In Hollis, p. 137, the variation: " and made themselves known as her sons." Ed. Hommel.

When the warriors saw the hatred of the woman against the members of her tribe, they disclosed to her their plan and obtained the assistance of the old woman. After they had quickly killed the boys tending the livestock, they took a bell from the neck of a head of cattle and hung it on a donkey. They tied the latter very close to a tree so that it constantly cried out and rang the bell. The Masai in the kraal heard this and assumed that livestock and donkeys were peacefully grazing. In the meantime, /228/ however, the warriors had made away with the herd and had taken the old woman along out of gratitude for her help.

539 177 829 Finally there should be repeated a little story in which a Masai, returning from the Berliner Kolonial-Ausstellung /Berlin Colonial Exposition/ of 1896, told his countryman about a custom observed there. He said: "In Germany little children do not get food from their mothers (as among us), but they are herded there like small livestock. On the street stand tables, and on these lie plates. When

/228 cont./

539 177 829 the herd of children arrives, the children sit down at the tables and eat. When they have finished eating, they are driven on." -- He had seen the pupils of a school, who were being conducted through the exposition.

Proverbs

539 Meti ol duńgani lemet ol ogunj' enje = There is not a human being who does not have his head. (Many heads, many minds.)

Meti ol duńgani lemet dobir en dog' enje egeniogo = There is no human being who does not do his business according to his plan.

Ol duńgani tenejo nedim aidobira = The person who wants to, can do. (Where there is a will, there is a way.)

Ol air torono, ol ari sidai = A bad year, a good year; in the sense of: sunshine follows rain.

Ol duńgani amida éaré t em baie kete = A stupid person is beaten with little things. (One gets to a stupid one with trifling means.)

El jeruata kumok me sidan = It is not good to have many friends.

Ol ari sidai kake esodjo ol torono = A good year is followed by a bad one; in the sense of: Pride goeth before a fall.

Ol duńgani oerta 'n dogi eeta el jeruata kumok, ol duńgani lemeta 'n dogi meta hanja = A rich person has many friends, a poor person has nothing. (A friend in need is a friend indeed.)

El duńganak ate minje sidan, enigi jogi njage 'n dogi = Few people are good if we want something (from them).

Toniño 'n gutuke ol duńgana' bege, kake torbare ol ogunj' enu = Listen to everyone's advice, but follow your head.

Gulia duńgana' l enjerna mejollo (ol) adjo hanja, gulia duńgana' l eeñai ninje ejollo (el) adjo sidan = One's own people know nothing, strange people know fine words. The proverb has the meaning of "No man is a prophet in his own country."

Ol duńgani oschal ojello aisaga duńgani ogul t ol osag l enje = A weak person can conquer a strong person through his intelligence.

Añas enī 'n dogi, bai-dogi en daa = First this matter, then the food. (Work before pleasure.)

supported the roof with his fore-paws, for he had no tusks. Whereupon the wart-hog said: 'You are stronger than me. Hold up the roof with all your might while I run out for some timber to prop it up.' The lion, flattered, agreed, and the wart-hog ran out and quickly made his escape."

(History does not relate how long the lion remained holding up the roof before he realised that he had been duped by the cunning wart-hog. This story is very popular and is always received with roars of laughter.)[1]

D [522]

M 539 829

The Dorobo plays the part of buffoon or low comedian in many Masai folk-tales.[2] The Dorobo themselves are well aware of this and regard it as a huge joke. A tale told by a Masai in which a Dorobo figures in an absurd light generally elicits hearty applause from the Dorobo present. I select the following example.

M 539

The Dorobo and the Cow.—The Dorobo is an impatient man. Once he was given a cow, and some days afterwards this cow was crossed by a bull. The Dorobo waited a month. Then he waited another month. He tried to milk the cow, but no milk would come. He thereupon said: "What sort of a cow is this? It will not give birth; it has no milk; it is altogether unsatisfactory." He then went away to sleep, saying: "Perhaps it will have given birth by the time it is morning." In the morning, all was as it had been before and the efforts of the Dorobo to milk the cow met with no more success. The Dorobo, who was determined at least to obtain milk, thereupon seized his knife and split up the cow's udder (for all Dorobo are impatient men), but no milk came, and his knife penetrating too deeply, the intestines of the cow fell out and it died. The Dorobo was very surprised and said: "This is a bad kind of cow and I do not understand it." He then proceeded to eat the meat until it was all finished.

P 191 538

I was surprised to discover so little resemblance between *Mósiro* folk-lore and folk-tales and those of the Nandi as given in Sir Claud Hollis's book. There is more affinity between the *Mósiro* and the Masai in this respect. This may perhaps be explained by the comparatively long period the *Mósiro* must

[1] [Some Bantu tribes tell it of the Hare.—A. W.]

101 claim to belong to them live elsewhere. Merker gives as the
634 principal divisions three provinces, Kisongo, Loita, and
101 Olbruggo. This is perhaps not according to Masai traditions,
634 but is not incorrect as a practical description of the present
635 distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there
614 are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

561 According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first
[304] stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circum-
561 cised about the same time (see p. 261 for details) are said
884 to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the
[302] Invincibles.' After circumcision the warriors plait their
[291] hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis),
[262] go absolutely naked. They subsist entirely on meat, milk,
[296] and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in
342 separate kraals with the immature unmarried girls, with
836 whom they are allowed to cohabit freely. Tradition[1] (see
561 p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when
[177] the Masai kept to themselves. Now that they have come
764 into contact with civilization, prostitution and venereal disease
[548] have become deplorably frequent. About the age of twenty-
561 seven or thirty, or nowadays when raiding is forbidden
885 somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.
[171]

/183/

752
164

Liver and spleen abcesses are supposed to be cut open to drain off the pus. I saw scars in the areas in question several times, but was never able to observe the operation itself.

757
164

For so-called bilious fever (ol odoa = the gall), an emetic is taken first, either a strong dose of grains of the ol odoa (Maesa lanceolata) or a bark extract of olti (Acacia mellifera); then one drinks a root decoction of ol deregeli (?) or of ol manusi (?).

To get rid of intestinal worms (taeniae [ol gurto, el gurt] and ascarids [ol budi, el budok])one uses decoctions of the bark of ol mokotan (Albizzia anthelmintica), of the root of ol deregeli (?), of the fruits of ol odoa (Maesa lanceolata), or also of the powdered bark of ol jani 'njugi (Embelia kilimandscharica Gilg), the latter of which is always taken with fat since otherwise it is too acrid and easily causes violent abdominal pains with diarrhea.

To cure ancylostomiasis (eig ga en gijabe) one administers a decoction of the bark bast of ol mokotan (Albizzia anthelmintica); the bark bast is cooked with meat; the patient drinks the meat broth.

Venereal Diseases

757
[164]
[548]

Gonorrhea and especially lues are quite rare among the Masai. This is due in part to the absence of professional prostitution, and in part to the fact that the Masai are familiar with the dangerousness of these diseases and their easy transmissibility. Those stricken with lues are segregated and may not enter any kraal until the external symptoms of the illness have disappeared; during this time they live outside the kraal in a superficially built hut surrounded by thorn branches for protection against predatory animals. Accordingly lues is called eig ga auló, formed out of eng ga = the sickness, auló = outside the kraal. Lues patients drink a great deal of liquid fat and liquid butter for a cure. One drips on the lues ulcers, as well as on [539] those of the chancres, juice of the leaves of ol aisigirai (?), sprinkles on them a powder made out of the leaves of ol agaramoni (?), or burns them with Cuprum sulfuricum, which the Masai obtain in trade with caravans.

/345 cont./

182 Harmful to the child's health, on the other hand, are the poor huts,
165 which are always /346/ filled with dense smoke, and furthermore
854 the lack of cleanliness and the faulty diet. The belief, widespread
[362] among all African primitive peoples, that fat gives strength and
[853] health leads to the stuffing of the baby, despite all its struggles and
[146] screams, with unbelievable quantities of butter. Soor, as well as
[856] stomach and intestinal affections, and ailments of the respiratory
[164] organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in inspecting the Masai kraals, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, unconsciously aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age
182 at which the men enter their first marriage is unfavorable for popu-
582 lation increase. Until about the 28th or 30th year of life the Masai
836 belongs to the warrior standing, and he may marry only after leaving
839 it. This circumstance in turn makes free love, such as exists in the warrior kraals, an understandable social institution. One must judge this arrangement on the soil in which it grows, in order to remain objective. From the same standpoint we shall have to judge more leniently the free love existing among the married, which, despite numerous restrictions, appears to us like a continuous prostitution
• [548] of the woman. One can do this all the more since through that professional prostitution is excluded here, and consequently the possibility of infection is greatly reduced; this last circumstance is undoubtedly to be regarded as people-preserving. Actually the Masai
[164] maintain that in former times (before the great livestock epidemics) venereal diseases only very rarely occurred. Immorality is rightly
182 regarded as a people-destroying factor, and history teaches us by
831 many examples how licentious and refined sensuality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

oo 'mungen, o e-rap, o en-gila, o ol-kipise.

stomach of a goat, the head-dress of ostrich feathers[1], and the cape of vultures' feathers, the anklets of colobus-monkey skin, the arm-clamp, the garment of calf-skin, and the piece of goat's skin fastened to the waist. [237]

Ore p' eidipayu 'ng-oloŋgi oŋgwan, nepwei aariku aŋg kulikae-móruak kituak.

When the four days elapsed, some of the elders will bring him back to the [illegible]. 881

Neitashŋyeki te-kutuk-aji e-'ng-aji natii 'n-opa-aishi naatamukaki.

He has [illegible] by the door of the hut where the honey-wine, which has previously been prepared, is kept.

Nejóki ol-móruo óbo lido-ŋpoloe e-aita: 'Inno, kitoo.'

One elder then says to him who is passing the fence: 'Go, become an old-man.'

Nejo lido-ŋpoloe e-aita: 'Ih! malo, e-ŋgikitoi!'

The latter replies: 'Ho! I shall not . . . !'

Nejókini kat'-are: 'Inno kitoo doshi.' Nejo ol-ŋpoloe e-aita: 'Malo doshi.'

The order is repeated, but he still refuses.

Ore pe ejókini kat'-oŋgwan, ore pe ebau en-e-imyet, nejo ol-ŋpoloe e-aita: 'Ih! aabómo naa.'

On being told for the fifth time, he says: 'Ho! I have gone then.'

Ore pe ejiŋg aji, nelakuni nakwa-tókitin, nóki taa 'n-aishi, neiteri ŋipotye eng-erna e-'n-gurai enye, eajo: Menye-ŋgunia.

He then enters the hut and puts aside the warrior's paraphernalia; the honey-wine is drunk; and he is called by his son's name, thus: The father of so-and-so. [351]

Neirukisho: 'Oo.' Nejókini: 'Taharishore.'

When he replies to this name, he is told to go and make a profit.

Nejo ninye: 'N-gisku oo 'n-dare.'

He answers: 'Herds and flocks.'

Ore pe eji nejo kat'-oŋgwan, neidipayu.

This is repeated four times, and the ceremony is over.

[1] Sometimes instead of the ostrich feather head-dress one made of lion's or leopard's skin is worn, and occasionally the head-dress called ol-merengesh is substituted. This head-dress is worn by the warriors when they slaughter cattle in the woods.

Death.

On the death of a child, or a warrior, or a woman amongst the Masai, the body is thrown away[2], and the person's name is buried, i.e. it is never again mentioned by the family.

Should there be anything which is called by that name, it is given another name which is not like that of the deceased.

For instance, if an unimportant person called Ol-tuaua (he who is soft, or weak, or gentle) were to die,

[526] [1] Divorce appears to be unknown amongst the Masai.

[2] The body is always taken to the west of the kraal, towards the setting sun. It is laid on the left side with the head towards the north, so that the face looks towards the east. The legs are drawn up to the chest, the left hand supports the head, and the right arm is [illegible] across the breast.

[723]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

'l-meneiga, nedulgtki en-nanai ae-arua, tjo epolpol.

gentleman would not be called en-nanai in that kraal, as it is the name of a corpse, but it would be called by another name, such as epolpol (it is smooth).

764
551

Ore ten eikilikwan ol-tulgani 'l-omon lo-'l-oiboni kitok, nemeipot Ol-onana, ntjo Ol-epolpol.

And if anybody of that kraal were to ask for news of the great medicine-man Ol-onana[1], he would call him Ol-epolpol.

Ore ol-paiyan kitok ôata 'n-gera ten ôi, nemenuki eng-arua enye amu eimany in-gera enyena.

If an elder dies leaving children, his name is not buried, for his descendants are named after him.

Ten ôi ol-paiyan kitok araki e-figurêyôai kitok, nemeishirakini, nemeiturari ninye anaa kulikae-tulganak oti.

When old men or women die, they are not wept for, nor are they thrown away like others who die young.

764
[888]

Eborakini 'n-amugha figejuko, ntyulgi ol-kerr, nenkilani e-ilata, nenliki e-amu pikin.

New sandals are made, a sheep is slaughtered, the fat is roasted, and the body anointed.

If small children mlete very old men[1], the latter spit on them, and say: 'May God give you long life and grey hairs like mine!'

Then, when warriors greet old men[2], the latter frequently spit in their hands before allowing the young men to grasp them.

If a Masai sees something phenomenal, such as a shooting star, he spits several times and says: 'Be lost! go in the direction of the enemy!' after which he says: 'Stay away from me.'

Again, should he forget, and call somebody who is dead, or mention the name of a deceased person, he spits. Should he hear any bad news, such as the death of some person, he spits, and says: 'Be lost, O God, we have no men.'

When the Europeans came to these countries and the Masai saw them for the first time, they used to spit, for they said: 'We have never seen people like these.' They also called them mulikiae-nam, and if a European gave a Masai mulikiae, the latter asked him to spit on him to heal him. Europeans were formerly called 'L-Ojoja' owing to their being hairy.

[1] Note p. 289.

[illegible] [2] It is customary amongst the Bari people for old men (Bakuru or grandfathers) to take children's hands between their knees and spit slightly on them to bless them (Mitter-Gessner, Die Sprache der Bari, p. 107).

[illegible] [3] Note p. 289.

particular relation. The naming ceremony is as follows:—When the child was two [553]
about a small man is chosen and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good looking and of good character, or otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but [551]
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named one of his
own he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the [554]
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [555]
which is performed with a small, sharp two-edged knife. The reason given for this [556]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [557]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start drawing water they have the holes of the ears pierced. Ears
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their [534]
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, [291]
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-up and is restricted [262]
to milk, fat, and meat, as no crops are grown.

Part II.—Between.

Herding.—As soon as they are considered old enough (and this depends upon the [557]
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [556]
is not considered in any way wrong for these boys to begin indulging sexually as soon [557]
as they like, provided that they observe certain restrictions. They may do as they [558]
like with the younger girls in the neighbouring villages, provided, of course, that they
observe the law forbidding sexual relations with any member of their own sub-clan, [559]

Marriage.—The warrior may not marry till after the *E-Unot*, and do not usually do so till after their first *Ol-Ng'ulat*. The case stated by Mr. Leakey,[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. 561 [1] 563 [1] 564 [1] 565 [1] 566

The cattle required for the bride-price are payable on the birth of the first child, and cannot be redelivered if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where lives a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the conditions (see p. 392) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle. 563 [1] 561 [1] 397 [1] 564

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation find that a man of another has had intercourse with one of their women. 978

If a woman who has borne children leaves her husband and lives apart from him, he waits till his eldest son is old enough, and then sends him to fetch her back. 586

A man may not have sexual intercourse with the wife of his full brother (another's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister. 835

A husband and wife may not call each other by their names. 551 [1] 573

Father-in-law
Mother-in-law
Son-in-law
Daughter-in-law } Must not be addressed by name.

Family.—The name for a family is *Ol Mawi*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Mamini* clan, he is proud of the fact. 602

Death and Burial.—Dead bodies are disposed of by the hyænas, except for those of *Laibons* or very influential old men. These are buried under cairns of stones. 764 [1] 765

[1] See p. [illegible] of this volume.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

In the first descending generation, the word *en-kerai*, "child," may be applied to son, daughter, brother's son and daughter, and father's brother's son's son and daughter, or they may be distinguished as man, *ol-ayiani*, "boy," and woman, *en-kito*, "girl." Father's brother's daughter's son is *ol-ayiani*, and father's brother's daughter's daughter *en-e-ninu*, the latter term applying also to father's sister's daughter's daughter, and mother's sister's son's daughter. The term *o-le-nonu* is applied to the mother's brother's daughter's son, mother's sister's son's son, mother's sister's daughter's son, and father's sister's daughter's son. *O-le-ak-ayu* is applied to the sons of father's sister's son and mother's brother's son, and *en-e-ak-ayu* to their daughters. In this generation there are no terms for mother's brother's daughter's daughter, and mother's sister's daughter's daughter. 601

In the second descending generation, *ol-aini* includes the sons of a man's own son and daughter, brother's son, father's brother's son's son, father's brother's son's daughter; while *enk-aini* is applied to their daughters. Father's brother's daughter's son's son is *ol-ayiani*, and the daughter is *en-e-ninu*. The term *o-le-ak-ayu* covers son's son, and the sons of sister's son, father's sister's son's son, and mother's brother's son's son; their daughters are *en-e-ak-ayu*. *O-le-nonu* includes the sons of sister's daughter, father's brother's daughter's daughter, father's sister's daughter's son, father's sister's son's daughter, mother's brother's son's daughter, mother's brother's daughter's son, mother's sister's son's son, mother's sister's son's daughter, and mother's sister's daughter's son; *en-e-ak-ayu* is applied to the daughters. There are no terms for mother's brother's daughter's daughter's son and daughter, or for mother's sister's daughter's daughter's son and daughter.

Among affines, the term *ol-ayiani* is applied to wife's father, wife's father's brother, and wife's brother, but their wives are *enk-ayiani*, *en-e-ninu*, and *en-e-nonu* respectively. Son and grandson of wife's brother are also *ol-ayiani*. Wife's sister is *e-nedani e-ayyi*, and all children and grandchildren of wife's brother and sister (except wife's brother's son and grandson) are *e-ninu*. The majority of affinal terms are in fact of the *-e-ninu* category. Husband is *ol-murran* or *ol-payian*, wife *e-gerovioni* or *en-kitok*; junior wife is *enk-aini*.

These kinship terms, however, are not very much used, for it is the custom of the Masai to call each other by cattle-names: members of a domestic group give each other cattle on various occasions, and thereafter the word denoting the kind of animal given is used as the equivalent of a reciprocal relative term; the animal name is prefixed by *pa*, meaning "giver or receiver of." Thus, a father usually gives his son a bull when he is about 10 years old, and they then call each other *pa-ongoni*, "giver (receiver) of a bull" instead of *papa* and *ii-ayiani*. An elder brother will give a younger brother a heifer, and they will then be *pa-e-kenai* (heifer) to each other. Paternal cousins often call each other *pa-mengesh* (ram). 551

Among these relatives, the mother's brother has great power and influence over his sister's son. He can give him orders, which must be obeyed, and he may take what he wants from his nephew, who has also the right to take what he wants from his uncle. Refusal to obey the mother's brother can be punished by cursing, but this is not reciprocal. Behaviour patterns are based on seniority and the claims of kinship, and are expressed in the avoidance of bad language and unseemly actions, and the observance of formality between certain persons. There is avoidance between a man and his wife's mother, and between a man and his full brother's wife, though not between him and his half-brother's wife. The formality of greetings helps to preserve the respect for elderhood. 604 602 606 607 608

Pre-marital Sex-life

A man's sex-life begins when he has been circumcised; a girl's when she reaches puberty. Pre-marital relations are more formalized than among the Nandi, since the unmarried warriors of a local company, *siré*, live in a barrack, *e-manyata*, with their mothers, some of their sisters, and their girl lovers, *e-nanoi*, each man having his own lover. The rules which regulate marriage apply in the selection of a lover. 536

13:Huntingford E-4 [no date] 1953 FL12 Masai FL12

553 and these old men. If it has not previously received a name, it may have been
852 called by the name of its father's father; but at the naming ceremony it receives a
name which may be that of its father or a name not connected with any relative.
551 People are also given nicknames referring to their physical or other peculiarities.
There is much uncertainty about Nandi names; but every man has a personal,
consisting of *Ole*, "son of," preceding his father's name; this he appears to assume
after circumcision. Girls after circumcision may be referred to as *Kwe*, "daughter
of," preceding their fathers' name. At marriage, the husband gives his wife a new
name. The practice of teknonymy is a regular feature. Before the circumcision of
his eldest son, a man becomes known as "the father of" *Sa-ana-ne*, *i.e.*, if his son is
called Sendeu, he becomes Menye Sendeu; his wife similarly becomes Que Sendeu,
the mother of Sendeu.

551 The name of a dead child, woman, or warrior is not spoken again, and if the
Ad name is an ordinary word, that word is no longer used by the family. Thus, if a
man called *Ole-ronoo*, "the gentle son," died, on his death the word *nono* would
be replaced in his family by some such word as *pulpul*, "smooth."

Circumcision (E-nawata)

[91] Boys' circumcision ceremonies take place at intervals of about three years, and
304 the circumcision period is "open" for about four years. Though the operation may
be performed on boys singly or in small groups, the whole number of those circum-
[70] cised at the same time throughout Maasland forms an associating group corresponding
in some degree to the Nandi *mat* (see pp. 31 and 46). Judging by the published
accounts, circumcision was a much less prolonged and ceremonious affair than among
the Nandi. Before a boy can be circumcised, the father must submit to what is called
ene-ledonie e-ata, "the passing of the knee." After making honey-wine, he stays
alone in a small hut outside his kraal, dressed as a warrior. After four days, some
elders bring him back to his kraal, where he is told to remove the warrior's clothes
and become an old man. His son may then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the
afternoon after this has been done an ox or sheep is killed and eaten by the warriors
and elders of the neighbourhood. On the second day, the boy cuts a tree called at
[120] this time *e-ladon*,* which the girls of the kraal carry to the door of the hut [in which
the boy sleeps?], where it is planted. On the third morning the boy gets up early
and sits outside to get cold; after sunrise he is circumcised, the operator being alone
a Dorobo. From the fourth to the seventh day he remains at home, and then goes
out, shooting with blunted arrows at the girls, and with other arrows at small birds
[199 which he wears hung from his head. This is his occupation till he has recovered;
292 during this time he is known as *e-ngudoi* and wears the dress of a married woman,
including the *i-ewata* ear-rings, and an ostrich-feather on his head. After recovery
he is shaved, given weapons and warrior's clothes, and becomes *al-kawuni*, "the
shaved one," *i.e.*, a junior warrior. Till his local company forms its *ewanyata*, he
lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There
are no special times for this. As on ox or sheep is killed before the operation. During
the period of recovery they are known as *e-ngudoi*, and wear on their heads a wreath
of the Hyphaene palm, *al-merinian*, or of grass, instead of an ostrich feather.

Age-sets

564 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear
type, that is, they do not work in recurring cycles and do not come into existence
till they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis
(1905), and Dundas (1908), as well as from the Tanganyika age-sets (Hollis, 1907),
that some at least of the names are fixed and recur. In 1939 the names Ilmelo

* *Erythrina mesomela*; normally *ol-il-i-ladon*.

601 /41 cont./

The grandfather designates the grandson as ka ahula.

/42/ The grandmother designates the grandson as ko gerai ko gerai ai, that is, child of my child.

Father-in-law: ai abudani lai.

Mother-in-law: ang abudani ai.

Brother of wife: ai abudani or ai alaeha le 'ngaeiani.

Sister of wife: ea aidani ai or ang anaeha a ngaeiani ai.

Wife of one's brother: a' ngaeiani ai alaeha lai.

Wife of the half brother: ea aidani ai.

Different ones of these designations are terms of address among relatives, with the exception of the ones for father and mother, who are addressed as baba or Mio. Most terms of address by far are formed from names for animal species: if one has given the one concerned a gift of a bull, one calls him b-aidani, from ai aidani, the bull; after the gift of an ox or a cow, ba-'gerak or ba-'gaehi (ai gerak, the ox; ai gaeni, the cow; 'ngaehi, the meat); of a heifer, ba-'s dane (from ea dane); of a calf, ba-uhe or ba-be (from ai or ang aeha); for a donkey, ba-sigiria (ea sigiria, the donkey); for a male calf, ba-mani, for a buck goat or sheep, ba-meregerch, for a mother sheep, ba-gae, for a she-goat or sheep, ba-adane; for a she-goat, ba-gine; for a female sheep or female goat that has not yet had young, ba-ahea; for a kid or lamb, ba-lale, for twin lambs or kids, ba-mae (1).

1. E mae, the twin.

551 With all these designations may be addressed: the brother by the
976 brother, the half brother by the half brother, and -- if the one
(601) addressing and the one addressed are the same age -- the father's brother, the son of the father's brother, the son of the father's sister, the son of the mother's brother, the son of the mother's sister, the son of the brother, the son of the sister. Male individuals who are close friends and the same age also use these terms of address, as soon as they have given each other the first head of livestock. The later gift of a head of livestock of another kind does not alter the form of address.

/42 cont./

601 (431) (551) As soon as the man marries another woman, each of his children present her with a head of small livestock and call her accordingly, ba-ger, ba-gine, ba-ndare, ba-suben, or ba-lelo. The term of address for father-in-law is always ba-geteń, for mother-in-law, ba-ger.

Brother and sister call the sister and half sister en gîo. Brother and sister call the brother and half brother enîjo. The form of address for the father's brother, baba; the mother's brother, abula; the sister of the father and of the mother, loko. The brother of another wife of the father is addressed as baba, if he is old; by his name if he is younger. The sister of another wife of the father is called loko if she is old; en aktok if she is younger. The latter (pl. 'n aktwa) is also the term of address on the part of /42/ unmarried men for a woman in general. The uncle calls the nephew abula, the niece 'n gabulîja. The aunt calls both en gerai ai : my child.

601 605 For the terms of address of those relatives whom we designate as male and female cousins in the narrower and broader sense I was able to construct the following rules from a very large number of examples:

1. If the relationship is derived from the mother's father or from the husband of the father's sister through consanguinity or relationship by marriage, the boy calls his male cousin abula, boy and girl call the female cousin en gîo before her circumcision and 'n gabulîja afterwards. The same designations are customary for (friendly) members of the lineage of the mother and of the husband of the father's sister.

2. If the relationship is based on consanguinity through the father's brothers or on membership in the same lineage, the male cousin will be called arahá by a boy, the female cousin 'n ofha by boy and girl, both before and after her circumcision.

The girl calls any boy standing in a cousin relationship to her, according to one of the two rules, ol sinîja 'ng ai : the one given (me) by God.

/43 cont./

601 605 [431] The designations abula, en gijo, arabá, and 'n gîha are used only as long as the above-mentioned terms of address are not affected by gifts of livestock. This explains why they are used only among children. This does not apply to the address ol aiacha 'ng ai, because the girl is not in a position to make the necessary gift of livestock.

601 The son and daughter of the brother or of the sister are addressed, as long as they remain in childhood, with ne gerai ai = my child. The address for the grandfather runs ng ainja, for the grandmother baba. The grandfather calls the grandson ng ainj'ai; the grandmother, baba ai. Brother-in-law and sister-in-law are called by name or the terms of address derived from livestock designations.

[431] [651]

IV.

600 Conjugal relations. -- Betrothal. -- State of being betrothed. -- Bride price. -- Evasion of the bride price. -- Obstacles to marriage. -- Wedding. -- Beginning of the marriage. -- Dissolution of the marriage.

581 The conjugal relationships are very loose, and in some views about them the Masai stand in unfavorable contrast to their sedentary Negro neighbors. As among the latter -- and, to be sure, without exception (1) --

595 [671]

> 1. The so-called monogamy of the Wambugwe is in practice the boldest polygyny.

polygyny prevails among the Masai. The number of wives of a man is limited neither by law nor custom, but depends only on his means. If a man has but one wife, poverty is always the reason. There are no temporary or trial marriages; rather, marriage is a more stable relationship. The woman through the marriage passes into the family of her /44/ husband, but not into his lineage; rather she retains membership in her own lineage.

581 [583] [618]

/44 cont./

582 for the contemplative idleness of the married man. But before the
583 marriage takes place the bride price is to be paid first.

As bride price (en dogitin = the things, each part of them, en dogi = the thing) he first pays the bride's father five pots of honey from which beer will be brewed, furthermore three cows and an ox. The bride's mother receives a male and a female sheep. The ox and the male sheep will be eaten at the feast taking place on the
[601] wedding day. Around that day, more often afterwards than before,
[561] the /45/ bridegroom further brings the father-in-law a cow and the mother-in-law a female sheep that has not yet had young, whereupon the former call each other ba-geteñ (1).

1. Cf. Second Part, III, terms of address for relatives.

while the bridegroom and the mother-in-law call each other ba-ger
585 from now on. Every wife married later receives at the wedding
[595] from the principal wife of her husband a year-old heifer, whereupon
[481] the two call each other b'-asche, from the eldest child of her hus-
[551] band two goats or sheep, hence the address ba-ndare, and from the
[601] smaller children of four to six years old and upward a goat or a sheep each, through which the address ba-gine, ba-suben, or ba-
583 ielo is brought about. During the period immediately after the wedding, the mother-in-law receives from the son-in-law several more pots of honey, skins for clothing, and iron wire for making
[791] leg and arm ornaments. In the family of Chief Zendeo he receives, as he told me, only a cow as bride price for one of his daughters, while the mother of the girl gets two donkeys, a bull and a cow with calf. Since the last rinderpest it has happened not infrequently that a man is not in a position to pay the customary bride price. He then gives the father-in-law only one cow and leads her to him on a rope twisted out of grass. Whereas the bridegroom or young married man delivers the gifts of livestock himself, he always sends the honey by a woman. She is either a wife married previously, his mother, his older sister, or a wife of his brother. Only when the distance is very great does he deliver the honey himself,

/55 cont./

VI.

000 Names -- Male and female names. -- Meaning of the names. -- Giving names to male individuals, festivities, examples of names. -- Giving names to female individuals, festivities, examples of names.

• 551 A great part of the names used today is of ancient origin. Some brave warrior or an esteemed man, whom perhaps an old man has known or who lives on only in tales, had a certain name, which is then given again and again to children or adults. Its meaning is not known, perhaps that hero was also named after another, without anyone's knowing an explanation for the meaning and origin of the name. Other names are derived from origin, descent, experiences, -- physical or character traits, trees, etc., or signify flattery or, finally, refer to personal favorites in food, clothing, ornaments, and weapons. In these names, too, the attachment to the old can be recognized, since the designations from which they are formed are often no longer used today at all and also are only little known. Male and female names are known, and others are given in unaltered form to both sexes. The names of more generally well-known, older men are also /56/ feminized by prefixing the syllable en or ehg. When parents use the names of their children who are at a young age, they add to the male name lai, to the female one ai, that is, my. Deceased persons who left no descendants are not mentioned by name, but rather one says: the deceased son or the deceased daughter of N. There are no special names for twins. A child born with extra fingers or toes is often given the name Nogimojik. If one asks anyone his name, he usually looks away and lets another one standing beside him answer. [732]

553 Usually before a boy's upper incisors come through, but at this time at the latest, his mother chooses a name. The day of this name-giving is often -- not always -- celebrated with a festival, the ol geteß l en demßu, to which the married men and women among the relatives are invited and are regaled with beef and honey beer. For the festival the child's head is shaved for the first time, as is the mother's for the first time after her confinement. The hair of both is placed under the father's sleeping place. Toward three o'clock in the [302]

/56 cont./

553 afternoon the festive company sits down in a circle under a shade tree in the vicinity of the kraal, half of it made up of the men and the other half of women. The infant to be baptized sits on the lap of its mother, who, along with the other women, is still deliberating over the choice of a name. A neighbor suggests that they should name the boy ol gorog, that is, the short one, because he is still quite short for his age, whereas another reminds them of the joy that the mother had when she found an ostrich egg on the steppe a few days before her delivery, and opines that they might give the little one the name Mosorik (from e'-mosorik = the egg). After the women have been chatting back and forth in this manner for a while, amid laughter, an older brother of the woman (1)

> 1. That it is he who does this, and not the husband, is probably to be understood as a survival from matriarchal times, and likewise that the mother, not the father, gives the first name.

gets up and asks her what the child should now be called. She
• [551] mentions the name Ol lolgiachu = cattle owner (2),

> 2. Obsolete in this meaning: the name Ol olgiachu now means that its bearer, for the price of a head of cattle, had his freedom purchased from the slave state into which he had fallen as a result of a cattle epidemic and famine.

which the old one immediately announces to the gathering, whereupon the latter give a cheer for the "baptised" infant and cry out "dabe riachuri ñ giachu a daré (acquire cattle and small livestock). Then the mother hangs a chain of large and small beads (es engeni, engeni e gulugi, gulugi) around the little one's neck. Now the entire company stands up and moves in single file toward the entrance of the kraal. Here lie the thorny branches that are pulled into the enclosure at night to shut up the kraal. They are danced around with short,

[535]
[533]
[782]

/57 cont./

553 lacking such, some older man of her lineage or tribe, gives it to him. The festival that is celebrated in this connection is very similar to the one described above at the first name-giving, but considerably more sumptuous. It is never lacking, whereas the other one is often omitted.

He receives his next name as a warrior, after his return from a campaign in which he has killed or seriously wounded one or more enemies. /58/ In full battle array, but without weapons, the [514] warriors assemble toward evening in their kraal; they squat together, [535] with a large number of young girls standing around, while those of them who are to receive the warrior baptism perform war dances with astonishing endurance, spear and shield in hand. After the new names have been agreed upon and have been called out to the ones concerned, they are celebrated in improvised tests. The names refer to warrior virtues, military events, or even costumes that the ones honored today wore on the last campaign. This festivity is repeated on each of the next four or five days in a neighboring kraal, to which the ones newly named wander with a number of their comrades and a crowd of young girls. Thus the new names quickly become generally known and familiar.

• 551 Names that the mother or father give to their small sons, besides the ones previously mentioned, are the following: Kaiga = the long one who can reach up high; Lesebga, from es segebgai = iron wire; Massaga, after the like-named area; Jiddo, after a former chief of this name; Bettello, after the cloud of dust that the cattle stir up while being driven, may the son acquire so many cattle that their cloud of dust is very great; Ol ôgumcho = pesa, the copper coin commonly used in East Africa and worth two pfennigs. For a time it was [301] very popular among the Masai as an ornament and was worn on a small chain or on wire in the upper rim of the ear; Lebelob = thick lip. Names that boys received as principal names at the age of four or five are: Lamewui = the clever one; Kubuga or Sabug = the fat one; Nemodari = the goat-milk drinker; Aseije or Matonje = darling; Ngatje = given by God; Nasilani, after a tree called ollani, whose

/58 cont./

551 roots are eaten: Ol eschwaga = the herd owner: Ol ogunja kitok = big head: 'Lebati, after a like-named area: Saidim = the one who can do everything: 'Lailago = the one who acquires many cattle: 'Lomashra, from ol mashra = the baobab (Adansonia digitata).

As warrior names I found: Kiliata = the brave one: Mapanja = the seriously wounded one: Johgai = the thin one: Ol gindigi = the joy-bringer: Ol olpuki = the terrible one from whom everyone flees: Marti-ol-ugaru = lion-skin cap: En diladdi = big spear: Sabu-e-naiga = the ornamented one: Magujenaiga = the gaily clothed one: Mashuggo = the fleet-footed one: Pilenaiga = red cloth: Kerienaiga = white and red cloth: Sabenjo = the impetuous one.

553 551 As a married man, the man is named first of all after his first-born child, son or daughter, for example, menje Saidim or baba Saidim = father of Saidim, menje Lailago or baba Lailago = father of Lailago, but only as long as the child is living. After its death he is named in the same way after the oldest of his living children, and so on. After the death of his father and grandfather, the older man also adopts their names.

/58/ The name that the boy received as a baby he bears only until he is given his principal name. In later life he bears this as well as his name received as a warrior and that of his father. Sometimes the one is more often used, sometimes the other. One must therefore know just about the whole family history of a man in order to know immediately who is meant by a name mentioned in conversation.

553 The Masai are not quite so extravagant, though still always very generous, with the names that a girl and woman bear. At the age of a few months the girl is given her first name by her mother. This name-giving is celebrated in exactly the same way as was described above for that of a boy. Despite the fact that the girl can never acquire livestock herself, the wording of the festival saying for a female infant to be "baptized" is the same and in this case means: may your brothers and your later husband give you much livestock.

/10 cont./

553 As soon as the girl can walk she is given a second name, and, to be sure, by her father. For this a festival just like the preceding one is celebrated in one regions, in others a smaller one, in which only the older women of the kraal take part. On this occasion the girl sits beside her mother or, if the latter is expecting a child, beside another wife of her father. Only the father calls the girl by this name: all other people and even the mother call her by the first one, which thereafter remains her principal name. More rarely one finds the custom that the girl receives yet a third name during childhood. Where it exists, the mother, as well as the relatives and friends of the girl calls her by the first name, the father by the second one, and cowl acquaintances and strangers by the third one. This third namegiving is also celebrated by means of a little festival.

The girl receives the futh name, as a wife, from her husband immediately after her marriage. Only he calls her by it, or in place of it also simply "my wife, e' Ãgwojoni ai, whereas other people designate her as before or athe wife of N. After the birth of her first child the woman is named ter it, for example, Ãgono Saidin = mother of Saidin. If the cild dies, the mother is again named as she was before its birth. Inater life she is always named after her oldest living child or simply Kolon, that is, old one.

• 551 The author found as for names of girls: Lelmurungo (from el murungo = the banana, sweet potato): Lelãgo = the one who can milk well: Sinta, this is wht one calls the smacking of lips when drinking milk to express its sweetness: Lĩmãt, after a like-named tree: Lendol, after the name of olum-like fruit: Kagos = favorite food: Sokgoi, from the word ekgol = the stick: Kidjale = the nimble one: Sokõgo, a word whose meaning is unknown.

/11/ Second names for girls are: Mamã, contraction of mama ai = my mother: Ki gaini ai = my darling: Lemõgo = the light-skinned one, whose skin has the color of ok coffee with milk: Sokgoni or Sokgoni = the crafty one: ninet, after a like-named area: Gamõngo, named after a ox. Of unknown meaning: Nebita.

/60 cont./

• 551 Third names for girls: Eig or = the sweeper, from a-or, to sweep: Lerai, Ol ginje, Ndebôl, after like-named trees: Lenchau, from enchau or ekau = to rain through into the house: En gokoi = the way: Betate = the one who fell down (a-betat = to fall: a-dabetate = I have fallen): Mbui, after a similar sounding call with which one calls back the goats and sheep that have strayed from the herd in the pasture: Kanu = the thick-boned one.

[103] Names that women received after their marriage are: Eig arur' ai, that is, the wife who comes from the Arusa area, as the Masai call the Gapa-Aruscha /Great Arusha/ area at Meruberg /Mt. Meru/, where many Masai found refuge in the famine. En gieboro, after a former great warrior named Ol gieboro: similarly formed En gieboo from Ol gieboo.

VII.

000 Circumcision of the boys. -- Point in time. -- The circumcision years, festivities at the end of them. -- Day of circumcision. -- Operation. -- Feast. -- Behavior of the circumcised until the healing of the wound. -- Circumcision of the girls. -- Point in time. -- Operation. -- Behavior of the circumcised until the healing of the wound.

88 According to the belief of the Masai, circumcision was introduced
[115] by a command of God. After circumcision boys and girls are regarded as adults. The former are supposed to be circumcised as soon as they are strong enough for participation in a war expedition, that is, at the age of 12 to 16. Sometimes it is somewhat earlier. If the boy is particularly well developed, somewhat later if the father, lacking any other labor force, cannot spare him in the tending of the small livestock. Circumcision takes place lesser for poor sons of poor people or for propertyless orphans. Namely, for the most feasts held by the
[422] circumcised youths each one in turn has to provide a head of cattle: he must therefore either own it himself or have a father who will give it to him. If he lacks both, the boy first tries to acquire a small stock
[464] of cattle by tending herds for the well-to-do, and until then he remains uncircumcised. Such boys are called el ciechi ñ gieko. This word means "hardness," but signifies that it is a matter of someone who tends the livestock of other people for pay, like the Biblical word "hireling."

/71 cont./

561 576 *as dito* to *ol máruo lálá*,
as ałłáglił to *ol máruo lálá*, or *ol máruo*. If the latter is almost the same age as her husband,
loiło to *ol máruo ol máruo*.

[572] Friends often address each other with *ol díaro lai* or *ol jesai* = my friend.

Instead of the address term *'a ałłuak*, an *ol barneti* or an *ol morłai* says to an *as ałłáglił* whom he knows from childhood *'ałłáglił* or *as ałłáglił*, whereas an *ol máruo* in the same case uses the address term *aatto*. The term of address "*'a ałłuak*" for an *as ałłáglił* is more polite than "*ałłáglił*," the latter used toward a strange *as ałłáglił* would be downright impertinent and rude (1).

1. In places the term *as ałłáglił* also has the meaning "married woman"; thus, at different times I heard a young woman call out coldly to one not entitled to use this designation when he used it: "I am not your *as ałłáglił*."

The obsolete term address *as daglo*, used for *'a ałłuak*, is often regarded nowadays as affectedly polite.

[601] [665] [574] The terms of address required by kinship or livestock-gift take precedence over the above.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Singular.	Plural.	English.
Ol-ainto	Il-ainook	The nail, claw.
Ol-ukkiki	Il-ukkiok	The elbow.
El-keyen	Il-keyok	The long hairs of the tail of a wildebeest or zebra, &c.; the fine ends of these hairs.

Examples of other words:

Ol-oikgini	Il-oikgok	The bull, the strong man.
Eng-ejj	Ing-ejjik	The family, hut.
En-kenaiye	In-kenok	The leaf.
Ol-ngonaiyai	Il-ngonaiyok	The fruit.
Ol-dwara	Il-dwarok	The beast of prey.
E-mtilid	I-mtilick	The cow's dung.
Eng-ere	Ing-erick	The water.
Ol-arwilan	Il-arwilak	The bottle.

Class IV.

193*
552

According to another rule which applies fairly regularly to a large class of substantives, the singular appears to be formed from the plural by adding *i* or *ni*[1]. Comprised in this group are the names of tribes, a few commodities of people, most insects, some birds and small animals, and a number of words which were probably first known in their collective form. Examples of names of tribes:

Plural.	Singular.	English.
Il-Ankwenda	Ol-Ankwendi	The Swahili.
Il-Tatigwal	Ol-Tatigwali	The Nandi.
Il-Kiye	Ol-Kiyani	The Kipsigis.
Il-Uasin-gishu	Ol-Uasin-gishuni	The Uasin Kishu Masai.
Il-Kanu	Ol-Kanui	The Turkana.
Il-Turkana	Ol-Turkanui	
Il-Kamasya	Ol-Kamasyai	The Kamasia.
Il-Kakonet	Ol-Kakonetti	The Lumbwa[2].
Il-Lumbwa	Ol-Lumbwani	
Il-Olkop	Ol-Olkopani	The Lumbwa Masai[3].
Il-Lumbwa	Ol-Lumbwani	

[1] This construction is by no means peculiar to the Masai. In Persian, for instance, *i* is added to a word to mean one individual, e.g. *zan*, woman, *zani*, one particular woman; *bachu*, a child, *bachui*, one particular child; *ban*, time, *bani*, one time, once.

[2] A tribe living near the Lake Victoria, whose real name is Kip-sikisi.

[3] The Lumbwa Masai, who call themselves Ol-Kopi, and who are often referred to by the Masai proper as Il-Ungati-sin (the hard teeth), live to Gumsum East, Africa extending as far south as Kisumu. Their language is almost identical with that of the Masai in British territory, the chief difference being the pronunciation of one or two letters, *i* being spoken like *ph*, *p* being pronounced *p* or *w*, and the vowels being softened. There is also a tribe of people called Il-Olkop (Lumbwa or Lokoi) living on the south end of Lake Rudolf who occasionally speak Masai. They were met by Teleki and Höhnel (*On Discovery of Lake Rudolf and Stephanie*) and by Wellby (*Twice Under and Twice Out*).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Plural.	Singular.	English.
Il-Kaplomda	Ol-Kaplomdal	The Kaplomda.
Il-Kikiya	Ol-Kikiyal	The Kikiya.
Il-Tepesha	Ol-Tepeshal	The Tesha.
Il-Molelo	Ol-Molelal	The Chaga[1].
I-Sak	O-Sakl	The Sak.
Il-Torrobo	Ol-Torrobolal	The Dorobo[2].

Examples of names of communities of people:

Ir-gera	Er-gerai	The child.
I-ulpilis	O-ulpilisi	The outcast, i.e. a boy who has recently been circumcised.
Il-laroni	Ol-laroni	The shaved one, i.e. the warrior who has not yet grown pig-tails.
Il-murran	Ol-murrani	The warrior.
Il-moran	Ol-moran	The native, the savage, applied to all Bantu tribes.
Il-omoni	Ol-omoni	The stranger.
I-ungwana	O-ungwani	The kinsmen.
Il-tatewaya	Ol-tatewayai	The old.
Il-kiaser	Ol-kiaseri	The *Kiaser* age[3].
Il-kiser	Ol-kiseri	The *Kiser* class (*of Masai*)[3].

Examples of names of insects, small animals, and birds:

Ing-ulus[4]	Eng-ulusi	The very small ant.
Ir-kerpei	Er-kerpei	The grasshopper.
Ir-durilik	Er-durilik	The small bird.
Ir-dimengwe	Er-dimengwai	The meadow shark.
Ir-dara	Er-darai	The ant.
Il-kara	Ol-karai	The maggot, worm.
Il-ladu	Ol-ladui	The lizard.
Il-nadiar	Ol-nadiari	The tick.
Il-tiarak	Ol-tiarak	The bee.
Il-nasai	Ol-nasai	The locust.
Il-ainin	Ol-ainini	The lizard.
Il-ninam	Ol-ninami	The fish.

[1] Each tribe of the Chaga people (the inhabitants of Kilima Njaro) has a special name; thus, Il-Kimas (sing. Ol-Kimai), the Kimas.

[2] Some writers prefer Ambotis and even Wambotis. The *D* has been omitted at the commencement of the word, as Torobo would not be easily recognised. Ee-dorobo (pl. 'Il-dorobo') is the Masai for the tribe Ki-Tiaos. These words have probably no connection with dorop, short, as has been erroneously stated. [3] Vide p. xlv. [4] Vide p. xlv.

[4] Also mostly Ing-ulusi. It is perhaps of interest to note that an African, the large reddish-brown ant, called *ulula* by the coast people, which bites severely, is not included in this group, and forms the plural by adding *ai* to the singular.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

193*

Plural.	Singular.	English.
Il-ojodge	Ol-ojodgani	The fly.
Ing-ojodge	Eng-ojodgani	The mosquito.
I-mamboembor	O-mamboembori	The butterfly.
I-mvembalen	E-mvembaleni	The bat, swallow, swift.

Examples of other words which belong to this class:

Il-ainskij	Ol-ainskiji	The kidney.
Il-ale	Ol-alei	The tooth, tusk.
Ing-ainabe	Eng-ainabei	The cloud.
Il-ill	Ol-ill	The spark, stain.
In-gurura	En-gururai	The quill.
In-gipure	En-gipurei	The nose.
In-girura	En-girurai	The ash.
Il-ashe	Ol-ashei	The thorn, thorny plant.
Il-kidodge	Ol-kidodgani	The tail.
Il-illidig	Ol-illidigi	The sheep's dung.
Il-kipu	Ol-kipui	The tent.
Il-mani	Ol-manii[1]	The twins.
Il-mondgo	Ol-mondgoni	The corpse, spirit.
I-mbaur	E-mbauri	The egg[2].
I-kpuk	E-kpuki	The ear[3].
Il-kidodge	Ol-kidodgani	The mud.
Il-pauk	Ol-paukii	The grain or ash of maize.
Il-piyu	Ol-piyui	The chain.
I-mghura	O-mghuri	The cowry.
I-mghongo	E-mghongoi	The iron wire.
I-mmil	E-mmili	The dust.
I-mnyu	O-mnyui	The maid.
Il-tian	Ol-tiani	The bamboo.
Il-tadula	Ol-tadulai	The bell, cowrum.

EXCEPTIONS.

There are only a few exceptions to this rule. They are as follows:

Il-Masaai	Ol-Masaani	The Masai[4].
Il-Ainongua	Ol-Ainongui	The Europeans[5].
Il-Mzungu	Ol-Mzungui	

[1] Ol-mani means a child who has a twin brother or sister.

[2] A large egg-shaped sack used for honey, &c., is Ol-mbauri, pl. Il-mbauria.

[3] An unlucky child, or a dwarf, is Il-kpukii, pl. I-kpukiia.

[4] The original name of the Masai is said to have been Il-Mos (sing. Ol-Mot), and one even now occasionally hears old people using this word, especially when relating stories of former times. According to tradition the present form dates from the introduction by the Swahili traders of a certain kind of bead called Mas or Maas (sing. O-Masai).

[5] Europeans, or white people, were formerly called Il-ojoje, the hairy ones. This appellation was afterwards changed to Il-Ainongua, a corruption of the Swahili word Mzungu, which in the turn gave way to the present form.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Plural.	Singular.	English.
192 [193] Il-Chumori	Ol-Chumori	The Somali.
Il-Ilgirishiki	Ol-Ilgirishiki	
I-seyan	O-seyai	The wild dog.
Il-meeye	Ol-meeyai	The beast.

CLASS V.

In this class, like the preceding one, the singular of substantives appears to be formed from the plural. This is done by the affix *a* or *e*.

A large number of words belonging to this class are formed by simply adding *ot* or *et* in the plural and *ate* or *ete* in the singular to the roots of verbs not commencing with *i*. With verbs commencing with *i* the same affixes are made, and *k* is also produced. Other substantives which form the singular by affixing *a* or *e* to the plural were probably first known in their adjective state.

Examples of substantives made from the roots of verbs not commencing with *i*:

Plural.	Singular.	Verbal root.	English.
Ia-dwot	Ea-dwata	-dol, -dow	The wilness.
Ia-jikpot	Ea-jikpata	-jikp	The unknown.
Il-ashgot	El-ashgata	-ashg	The lord.
Il-lomot	El-lomata	-lom	The news.
Il-latot	El-latata	-lat	The place to creep through.
I-ameyot	E-ameyata	-ameny	The warrior's bread.
I-ayalot	E-ayalata	-ayal	The mouthful of food, the roll.
I-ridot	E-ridata	-rid	The boundary.
I-ereyot	E-ereyata	-erey	The foot-print.
I-siot	E-siata	-sir	The markings, stripes.
I-siot	O-siata		The letter, bill.
Ia-dumot	Ea-dumata	-dum	The measure.
Ia-dumot	Ea-dumata	-dum	The man, rock.
Il-ayot	Ol-ayata	-ayar	The paddle, paddle.
Ia-dawot	Ea-dawata		The shield.
Ia-nadgot	Ea-nadgata	-nadg	The place struck by a club thrown from a distance, the broken.

Examples of substantives made from the roots of verbs which commence with *i*:

Ia-gilimot	Ea-gilimata	-ilim	The being able.
Ia-gilwarshwot	Ea-gilwarshwata*	-ilwarshw	The thunder.
Ia-gilapayot	Ea-gilapayata	-ilapayo	The astonishment.
Ia-gingot	Ea-gingata	-ing	The sleeping place, the hospitality.

* Also ea-gilwarshwata.

THE HARE AND THE ELEPHANTS 103

[53]*

X-ooj **Ó-lor'ug-ok'**, **o-o-ple** **ol-Ilok**
And they-him-follow the-ol-lor-ones, and he-point-to the-big-one

ug-ulon **ooye** **oo-gimodo**, **o-o-lindig** **oo-gojo** **o'-o-gitijo.**
there he the-hole, and he-enters the-big ol-the-hare.

X-o-jo-ki **oo-gitijo:** "**A-jo** **ooye** **I-o-lindigo**
And he-him-says-to the-hare: "I-say I you-entered-here

oo-dooni."
the-rock."

X-o-ilgo-ok', **o-o-lindig** **oo-dooni.**
And he-it-leaves, and he-enters the-rock.

X-o-jo-ki **oo-gitijo:** "**Ki-ki-gi-o,**
And he-him-says-to the-hare: "You-are-here-broken,

ki-ki-gi-o"
you-are-here-broken."

X-o-yat **ol-lor'ug-ulon'** **ooloig,** **o-o-yat** **oo**
And he-it-pulls the-ol-lor-ones very, and he-it-pulls until

o-o-to-ooni-o-yo',
he-may-view-himself.

Ow **o-yat-ko'**, **o-o-kiki** **oo-gitijo,**
Now he-it-pulling-is, and he-rolls-away the-hare,

o-o-ilgat-oo' **ol-Olon.**
and he-roll-away-thither the-elephant.

X-o-ko **oo-gitijo,** **o-o-ioo** **I-o-ioni,** **o-o-jo**
And he-goes the-hare, and he-goes (or sees) the-baboons, and he-says

oo-gitijo: "**Lo-kwa!** **oo-ilo-ooi-o-o-ki**"
the-hare: "O-the-monkey! (pl.) you-must-thither-see (or know-ooi-o-for-me)."

X-o-jo-ki **I-o-ioni:** "**A-iyat** **ol-ki-ooi-ko-ki?**"
And they-him-say-to the-baboons: "What which-is you-shooting-at?"

X-o-jo **oo-gitijo:** "**Ol-kiteb-nolgoni** **ooiyok,** **ioono**
And he-says the-hare: "The-big-one ki, ugly

ol-ki-ki-kiteb **oo-oi-o.**"
and you-kiteb-one he-one-kiteb-kiteb."

* Now animals have two or more names. An elephant is either ol-Olon, ol-lor'ug-ulon, or ol-nolgoni-ugoni. [516]*

* The native form of religion, to have thither or to come from, is formed impersonally. [96]

* The same affixes are used for the subjunctive of relative verbs as for the future.

* Wants he is pulling it.

* He runs away and leaves the elephant.

DIVISIONS OF THE MASAI PEOPLE

Sub-divisions.

'Ilmarunk (the horse), Le'ukonot (of the cassia tree), Kilepu (watering-place), Ol-aiya (the which is decorated), Ewilgunya-ewarok (which astonishes the hearts of men), Kipulal (place of many springs), 'Il-gujudu (the one handles), Ol-Sgalata (the plain between two hills), Sighirari, 'L-ulia, 'Il-ng'ulgulak (the small snake), Ol-ulukituk (the bubbling spring), Il-Kunthu, Kitoto, Il-kuto'ne-kulan, Sulai.

'L-uaiu-gidoi' (the striped cattle).

'L-uaiu-gidoi ewarok (the black striped cattle), 'L-uaiu-gidoi ewuyokye (the red striped cattle).

'L-ilkiyguk'. Kinirt (gossamer), Marikiai, Il-ewuaak'a-dume (those who are not thrown down by cows), Sukia, Le-'L-pusbul (of the lowland), Le-nalour (of the white thing), Il-ewuaayiro, 'L-ulikiaai, 'L-ualiur-ulgak (the white bulls), Lee-ditewuaro, Il-ewuaar, Le'ukulian, 'L-ualugum, Eng-ulg e-Lemu (Lemai's bread), Il-kuju, 'L-uiai.

Where the article forms a part of the above names, the vowel is omitted if it follows a word ending in a vowel.

Ale 'Il-uipuka	I go to Ilaiuuka.
Ale 'L-ulukituk	I go to Lulukituk.

The Masai reckon time by 'agas' or periods of about seven and a half years. The following account of the Masai agas is given in the words of the Masai themselves.

Ene 'l-Masaai 'l-gawai laiyu.

The Masai have what they call agas.

Ewuawai 'a-gawa ne-'ulji ulio. Ilidig ulua 'l-gawai, ewuakali ulua ol-gawai ilu, ene ewulagwa ulkiu; ewuawai 'l-ewuan, ungati 'l-ewili ewuu-lulu.

Children are not all circumcised together: they are divided up into agas, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (i.e. until they reach the age of puberty).

Ore lukwa kituk ewuwali ewuawai ulji e-ewuuna e-kulilan;

Now, those who are circumcised first belong to what is called the

* Owing to noble plains, disease, and civil wars, the Masai carrying the Gudu-gidoi and ilkiyguk shamble have practically ceased to exist. The remnants have been scattered and mixed with other tribes.

Cattle, grass, and milk.

The Masai love their cattle very much, and consider that nothing is the world is of equal value. As with people, each cow is known by name.

There is a saying which is as follows:

'One cow resembles a man's head.'

They mean by this that if a man

[1] Vide note a, p. 300.
[2] The Masai cattle are of the humped Zebu type.
[3] Schweinfurth (*The Heart of Africa*, vol. i, p. 174) writes with regard to the Dinka and other Hamitic tribes: 'The poor savages . . . pay almost a divine homage to their cattle which they hold dearer than wife or child.' Kersteman (*Bahiaranga*, p. 100) adds that on the death of a cow a Dinka goes into mourning as he would if a relation had died.

[186] [187] [191]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

It is possible to consider that solidarity as a kind of class identity. 561
This identity does not exclude the possible variations and differentiations of class-members arising from individual differentiations of talents and character, from leadership, seniority and social prestige attached to the possession of a great number of wives and a large herd of cattle. The main expressions of that identity are the use of a single name for the whole class and some special marriage regulations which apply to class members and, to some extent, to their children.

Thus, a man may not marry the daughter of a member of his own class. If he fornicates with her he is punished by his own age-mates. " His kraal is destroyed, he is severely beaten, and a number of his oxen are slaughtered ". Similarly, " if a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade (or class), he is solemnly cursed by the members of that age-grade ". (HOLLIS). Furthermore, any class member when a guest of any of his age-mates, has a right to cohabit with his host's wife. MERKER, says that a widow " must not re-marry but she must live with the members of her deceased husband's class ". This " sexual communism ", as HOLLIS calls it, takes place only among members of the same class. It is limited, of course, by clan and kinship exogamy, which, even for class members, is strictly enforced.

At the performance of the *Eunoloiset*, *Engibata*, *Unato*, *Ngokere* names are given to sets instituted. Names assumed at the *Eunoloiset*, *Engibata*, and *Unato* are temporary, for temporary is the nature of the set thus established. At the *Ngokere*-proper all previous names are discarded for a single name which is final and applies to the age-class as a whole. It is this name which is handed down to the following generations. Age-class names are, as it were, the milestones by which Masai can order their past into a certain historical perspective. Class names are thus recalled when historical facts are recounted.

Lists of class-names have been recorded by our authorities. It may be of interest to reproduce here some of those lists collected by MERKER, FOX, and FORBROOKE.[100] FORBROOKE has attempted

has been shown them, he will enter one. When he has entered, the owner of the hut leaves him and goes to search for a place to sleep in... A Masai cannot refuse hospitality to a stranger (of his own age) for he is afraid that the other members of his age will curse him, and he will die ".

			Merisiko	1920	*Left-hand unit.*

[14] *** Figures of years are described by Foreeooke as the "approximate date of circumcision. The expression is very vague and shows how inaccurate the usual terminology is. Following our analysis it seems clear that "circumcision" means here "age-class", and, therefore, dates may be referred to either the performance of *Eunoto* or the performance of the *Eipuko* proper.

[14] *** A fourth list recorded by Dorsey, l. c., p. 366, is not reproduced here because it is evident from a comparison with the other lists that it contains "an indiscriminate mixture of age (unit) and class-names" (Fox).

are often called *I-Sipolio* or *Lenkutoo* (see Hollis, p. 306, Pl. XXIX).* They shoot at girls with wax-headed arrows, and a girl who is shot must then give the novice a ring, which is usually, if not always, of a special type, being very much curled and twisted. The novices must observe the following rules :—

They must enter the village before the sun is away evening.

Must not drink blood or not meat or touch it with the hand.

Must not wash.

Must not have sexual intercourse with girls (this is not kept strictly).

Must not fight or be struck by anyone. Anyone who strikes a novice must put milk on his head.

Must not go out in the day time without the head-dress of stuffed birds.

O-Sinpolio, plur. *I-Sinpolio*, is the general word for any dance. (Cf., p. 291.)

Warriorhood.—The *Age-group* system plays such a large part in the tribal organization that I will deal with it in detail.

A right-side circumcision is called *E-Warata a ntome* — the circumcision of right. A left-side circumcision is *E-Warata a kidjonge* — the circumcision of left.*

Each of these groups is called *Ol-pore*, an age-group. Each age-group takes a temporary name soon after circumcision and receives a new one at its *E-Unto* ceremony. For example, the present age of Purko warriors was called *Il-Tiapi* prior to their *E-Unto*, when they took the name of *Il-Kidonk*.

A right and a left age-group together form a larger group, which I shall refer to as a generation in contradistinction to an age. The term for a generation is *Ol-ipi*, but it is also often loosely designated as *Ol-pore*.

Speaking generally, each section has a different name for its senior age-groups. The exceptions are (a) Loita and Siria. (b) *Kaitumi*, *Il-Oikidoni* and *Kenyapo*, who respectively share a single *E-Unto* ceremony and therefore have age-names common to their respective groups.

The generation names emanate from the Kiserage in Tanganyika Territory and are common to all the Masai. They are given even after the warriors of the combined age have become elders. Therefore the age-names tend to fall into disuse and be replaced by the generation name.

A large number of names is given in Hollis, p. 303, but forms an indiscriminate mixture of age- and generation-names.

In the following table I have confined myself to names in everyday use in order to avoid errors and make for simplicity.* It will be noted that several sections do not have a left-side circumcision. In the remaining sections the right side is more popular than the left.

* I do not know the origin of the terms "right" and "left."
* For other generation names see Hanny, *infra*.

The feast called the offspring.

There is a feast known to the Masai as The offspring.

When a child is born, and the time has arrived for it to be given a name, a bullock is slaughtered which is called The(bullock)of the offspring.

A black bullock, and one without a blemish or a white or brown spot on it, is selected, and slaughtered.

The meat is then divided up between the women and men[1].

When the meat has been cooked and is nearly ready, one woman stands up and calls the others. She cries out as follows: 'The honey is ready, this is for the first time; the honey is ready, this is for the second time; the meat is ready, this is for the first time; the meat is ready, this is for the second time.'

The women of the kraal then carry milk to the child's mother, and after each has been given her share of the meat, they take their departure.

In the evening the mother carries her child to the entire kraal, and milks the cows with the child on her back.

When she has finished, three old men and the child's father (which makes four) join her, and the child is named.

The so-called offspring bullock is always slaughtered at the door of

[1] This word is now used to translate the English Bible term, the big day or holiday.
[2] Men and women never eat their meals together.
[1] Meat cooked in a special manner.

the hot, and the shell, instead of being thrown away, is placed by the door. The tail is not separated from the hide as is usually the case; it is left on until the hide is worn out.

Now the offspring bullock is not of necessity slaughtered when the child is born; it is permissible to wait until he is big and until he is about to be circumcised. No person is circumcised, however, until this bullock has been slaughtered.

The circumcision.

The following is a Masai custom:

A Masai child cannot be circumcised until the father has observed a custom called The pouring of the fires.

The man who wishes to have his eldest child circumcised brews some honey-wine, and calls his neighbours together while it is being prepared.

A hut is then built for him outside the kraal, and he stays there for four days alone. He also sleeps there, and his food is taken to him.

During these four days he only approaches the kraal to look after his cattle when they are grazing outside.

He wears due the clothes, ornaments, and weapons of a warrior—the sword, the spear, the club, and the shield, the cap made from the

The following description is given by Mr. Stewart :—

A Chief, known as "Ol Oloiyani," and a Sub-Chief, known as "Ol Oloiyani-gwal," is chosen by the Elders from the ranks of the Moran for each division or group of divisions.

A black bullock is sacrificed, tied up and strangled with "tandos." The "O Lyak" (boy) commits by pulling off the horns of the bullock. The one who succeeds in doing so is regarded as a great warrior.

The bullock is subsequently strangled—it must not be touched by a knife—and eaten by the "O Lyak."

The "Ingwenak," Counsellors of the incoming warriors are selected prior to the ceremony. The Elders give each of them a black cloth, a bullock, a large goat and some honey.

A new name is given to the outgoing Moran, and the incoming Moran are given an "ego" name.

Immediately after the S.Clients, the "O Lyak" returns to their kraals (villages), where they are circumcised by certain "O Kaudos," and their heads shaved.

They then have "Bonyolos" of their own, and after their hair is gone.

They are known as "O Sowoni" before their hair has become long.

The outgoing warriors also have their hair cut and return to their "Manyatta." They may still remain Moran for as long as they please, but it is said that in the absence of any wars this period will be much less.

There are therefore for a time two groups of Moran, the senior and junior warriors. Constant fights are said to take place between them.

In the Agreement between the Masai and the Consul Hemsley, concluded in August, 1904, it is recorded that the Masai asked that they might be allowed to retain control of an area five square miles of land (at a point on the slopes of Kilimanjaro) whereon they could carry out their circumcision rites and ceremonies in accordance with the customs of their ancestors. The Consul Hemsley, in signing the Agreement, stated that, subject to the Secretary of State's approval, he agreed to the terms embodied therein. The Agreement of 1904 contained a proviso that the Masai tribe should not thereby be deprived of the rights conferred to it under the former Agreement in respect of the land on the slopes of Kilimanjaro, whereon the circumcision rites and ceremonies might be held.

The fact that that area was still reserved for them induced the Masai in January, 1911, to apply for permission for a few of their members to be allowed to reside permanently on the area, with a view to keeping it in good order. To this application the Governor was not disposed to consent, and he based his objections on other methods to be employed to ensure that the ground did not become overgrown. At the same time, he gave his opinion that it was not essential for these ceremonies to be held on Kilimanjaro, and suggested the utilization of some place within the boundaries of the Masai Reserve.

In 1912 a repetition of the ceremony was due to commence, and in February of that year the Laikon and Isiolo approached the Officer-in-Charge with a request that certain divisions might proceed to the reserved area at an early date. The divisions affected were the Kaimasalkin, Purko, Dala Lekutuk and Ilkiaria, each of which should, according to custom, proceed to the ceremonial ground with its flocks and herds to the date named and remain there separately for six months. Though the Government was bound by an Agreement in the nature of a treaty with the Masai tribe to allow them to control the area on Kilimanjaro for ceremonial purposes, it was considered that it would be very impolitic to allow these Masai Elders to have their herds with their stock, for the area reserved would be insufficient for the needs of the Masai unless the number of cattle they were allowed to take was regulated, and the cattle would constitute a source of

Preface.

[1] In the past very little detailed work on the social life of the Masai has been attempted, [2] since such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Masai language sufficiently fluently to make such an investigation in that language.

Although I cannot claim any knowledge of the language of the Masai, I have been [3] fortunate enough to become friendly with four Masai who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn everything from them about their customs.

These notes are of necessity brief and full of lacunæ, since I avoided asking direct [4] leading questions, though tempted to do so, and also because they do not include information which it was obvious from so cursorily as were these two informants.

The Masai from whom this information was obtained came from that part [5] of the Masai Reserve which lies to the west of the Rift Escarpment, and I was not able to find out whether these customs prevailed among the whole of the Masai group.

My two principal informants were an old woman, past child-bearing, and her married son, aged about 30. (I have unfortunately lost the paper with their names). [6] They were insistent that most of these customs have been slightly modified since government control has been set up, but I have, nevertheless, written mainly in the present tense.

Part I.—Ceremonies.

[7] [8] *Birth.*—Among the Masai, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she assumes a stooping position supported by other women, as the first child is considered more difficult to deliver; otherwise a woman giving birth to a child lies upon the hut. The acting midwife cuts the cord with a special instrument[1] and bathes the woman and new-born child are washed with warm water. The placenta is buried out and thrown down in the cattle yard, but is not buried. As soon as the child is born it is anointed in order that an animal may be killed to supply blood for the mother to drink. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood see Part III.) From the day of birth seventeen sheep and goats are killed to supply meat and fat for the mother in order that the child may grow up strong, but these animals have no special significance, and are not sacrificial or for purificatory purposes.

[9] [10] *Naming Ceremony.*—Children are not named until they can run about, and neither name either first, fifteen tribes, the child does not inherit any name from any [11] [illegible]

[1] There is some mystery attaching to the instrument used, and I am not sure what it is.

particular relation. The naming ceremony is as follows:—When the child was two 553
about a small man is chosen and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good looking and of good character, or otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named some of his
own he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [illegible]
which is performed with a small, sharp two-edged knife. The reason given for this [illegible]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [illegible]
water and gruel can be passed in through the hole so formed.

Ear Piercing.—At the age of about 5-6-7, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start fetching water they have the holes of the ears pierced. Rings
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted cylindrical plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is mentioned 242
in milk, fat, and meat, as no songs are given.

Part II.—Seniority.

Herding.—As soon as they are considered old enough (and this depends upon the 859
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [illegible]
is not considered in any way wrong for this boys to begin indulging sexually as soon [illegible]
as they like, provided that they observe tribal restrictions. They may do so they [illegible]
like with the younger girls in the neighbouring villages, provided, of course, that they [illegible]
observe the law forbidding sexual relations with any member of their own sub-clan.

his father's home or in his own manyatta. But it seems that a ceremony is performed which releases the husband from the prohibition on women having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers, she may cohabit with her husband's brother. It appears that a widower who has had children may not remarry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 589 590

Polygamy

A man may have as many wives as he can pay for: one of Dollie's informants says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and four are found much less often, and more than five very seldom. Each wife has her own hut in her husband's kraal, and up, the first wife to the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. 595

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own age-set) may have access to his wife, and though men of one age-set are not supposed to cohabit with the wives of another age-set, in practice this rule is little observed. A married woman is not supposed to have intercourse with a unmarried woman, and a married woman may not have sexual relations with an uncircumcised boy. 597 598

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 599

Adoption

In the old days, children captured in war were often adopted, and even today children of "foreigners" (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which had been begotten by another man, and a brother will may adopt a child of one of his co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, and attendant. The women and girls of the kraal assemble, and when the child has been born they kneel on an ox supplied by the father, and they smother an ox killed for the use of the people of the kraal. The mother remains in her hut till she feels strong enough to go out. The husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife might be seen as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Dollie says till the time when it cuts the two middle lower teeth, upper and lower.) Twins are considered very desirable, and a twin may be preferred to a girl. 600 601 602 603

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and to the evening the mother, carrying the child on her back, milks the cows. After this, the child is weaned in the presence of the father and mother 605 606

953 and three old men. If a boy has not previously received a name, it may have been
952 called by the name of his father's father; but at the naming ceremony it receives a
name which may be that of its father or a name not connected with any relative.
956 People are also given nicknames referring to their physical or other peculiarities.
There is much uncertainty about Dorai names, but every man has a patronymic,
consisting of *O-le,* "son of," preceding his father's name. He he appears to assume
after circumcision. Girls after circumcision may be referred to as *E-ne,* "daughter
of," preceding their fathers' name. At marriage, the husband gives his wife a new
name. The practice of teknonymy is a regular feature. Before the circumcision of
his eldest son, a man becomes known as "the father of" *Sen-ai-ren,* i.e., if his son is
called Sendeu, he becomes Menye Sendeu; his wife similarly becomes Ejen Sendeu,
the mother of Sendeu.

952 The name of a dead child, woman, or warrior is not spoken again, and if the
bd name is an ordinary word, that word is no longer used by the family. Thus, if a
man called *Ole-mesa,* "the gentle one," died, on his death the word *mesa* would
be replaced in his family by some such word as *pulpul,* "smooth."

Circumcision (E-nerata)

[91] Boys' circumcision ceremonies take place at intervals of about four years, and
[92] the circumcision period is "open" for about four years. Though the operation may
be performed on boys singly or in small groups, the whole number of boys circum-
[93] cised at the same time throughout Samburu forms an associating group correspond-
ing in some degree to the Nandi *mat* (see pp. 31 and 48). Judging by the published
accounts, circumcision was a much less prolonged and ceremonious affair than among
the Nandi. Before a boy can be circumcised, the father must submit to what is called
ene-ibitwate e-nin, "the passing of the knife." After making honey-wine, he stays
alone in a small hut outside the kraal, dressed as a warrior. After four days, some
elders bring him back to the kraal, where he is told to remove the warrior's clothes
and become an old man. He was may then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the
afternoon after this has been done he or he sheep is killed and eaten by the neighbours
and elders of the neighbourhood. On the second day, the boy cuts a tree called at
this time *e-ndim,*[1] which the girls of the kraal carry to the door of the hut (in which
the boy sleeps[2]), where it is planted. On the third morning the boy gets up early
and sits outside to get cold, after sunrise he is circumcised, the operator being often
a Dorobo. From the fourth to the seventh day he remains at home, and then goes
out, dancing with blacked arrows at the girls, and with other arrows at small birds
which he wears hung from his head. This is his occupation till he has recovered.
During this time he is known as a *ngoldin* and wears the dress of a married woman,
including the *lorenia* cowhide, and an antelope-horn on his head. After recovery
he is shaved, given weapons and warrior's clothes, and becomes *el-barnat,* "the
shaved one," i.e., a junior warrior. Till his kraal company leaves to manyatta, he
lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There
are no special times for this. As in or sheep is killed before the operation. During
the period of recovery they are known as *e-ngoldin,* and wear on their heads a wreath
of the Hygrum palm, *el-merisan,* or of grass, instead of an antelope horn.

Age-sets

[94] Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear
type, that is, they do not work in seventy cycles and do not come into existence
all they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis
(1905), and Fadiman (1908), as well as from the Tanganyika age-sets (Hollis, 1911),
that some at least of the names are fixed and recur. In 1908 the seven Kisonko

CCC Menon — Male and female names. — Meaning of the names. — Giving names to male individuals, function, examples of names. — Giving names to female individuals, function, examples of names.

§51 A great part of the names used today is of ancient origin. Some have written or an amount name, whose perhaps or old man has known or who lives on only in tales, had a certain name, which is then given again and again to children or adults. In meaning it not known, perhaps that here was also named after another, without anyone's knowing an explanation for the meaning and origin of the name. Other names are derived from origin, heroes, experiences, — physical or character traits, times, etc., or signify factory or, finally, refer to personal function to food, clothing, ornaments, and weapons. In these names, too, the attachment to the old can be recognized, since the designations from which they are formed are often no longer used today or all and also are only little known. Male and female names are known, and others are given to anchored from to both sexes. The names of sons generally well-known, older sons are also /96/ bestowed by prefixing the syllable an or ahy. When parents see the names of their children who are at a young age, they add to the male name ian, to the female ana ri, then in, ary. Deceased persons who left no descendants are not commemorated by name, but rather one says: the deceased was or the deceased daughter of th. There are no special names for twins. A child born with extra fingers or toes is often given the name Bagiwadik. If one who anyone his name, he usually lends every and his mother are standing beside him name.

(Fig) §52 Usually before a boy's upper incisors come through, but at the time of the lawn, his mother chooses a name. The day of the name-giving is often — not always — celebrated with a festival, the ni gawi i ni Bandiko, to which the married men and women among the relatives are invited and are regaled with beef and honey beer. For the festival the child's head is shaved for the first time, as is the mother's for the first time after her confinement. The hair of both is placed under the latter's sleeping place. Toward dusk a chief is the

(Ind)

[illegible]

[illegible] whereupon the native company sits down in a circle under a dwale tree in the vicinity of the kraal, half of it made up of the men and the other half of women. The infant to be baptized sits on the lap of its mother, who, along with the other women, is still deliberating over the choice of a name. A neighbor suggests that they should name the boy [illegible], that is, the dust one, because he is still quite dust for his age, whereon another reminds them of the joy that the mother had when she found an ostrich egg on the prairie a few days before her delivery, and opines that they might give the little one the same moniker (Zoos [illegible] = the egg). After the women have been chatting back and forth in this manner for a while, amid laughter, an older brother of the owners (1)

> 1. That it is he who does this, and not the kaffirs, is probably to be understood as a survival from aboriginal times, and likewise that the mother, not the father, gives the first name.

give up and asks her what the child should now be called. The mentioned the name (2) [illegible] a cattle owner (3).

> 2. Obedience to his meanings. The name (2) [illegible] was name that he favors, for the price of a herd of cattle, had his freedom purchased from the slave state [illegible] which he had fallen as a result of a cattle epidemic and famine.

which the old [illegible] immediately announces to the gathering, whereupon the ladies give a cheer for the "baptized" infant and cry out "[illegible]" (meaning cattle and small livestock). Then the mother hangs a chain of large and small beads [illegible] (meaning [illegible]) around the little one's neck. Now the entire company stands up and moves in single file toward the entrance of the kraal. There in the thorny branches that are piled into the entrance or right to that of the kraal. They are danced around with them,

[illegible]

[illegible] dancing steps, vivacity, singing. It is prayed to "Dig si-Ban" for the hay harvest big and [illegible] under a strong warrior set of kits, one who will capture scarce [illegible] and then in old age carry such a head as large as this one is here. Then the people enter the bowl where the men again apply themselves to fashioning the heavy hoes, while the women amuse themselves with dancing, for which they sing with dulll voices songs of praise and prayer for "Dig si." The success of a festival is judged by the degree that the men's intoxication and the women's gaiety reach at the end of it. Soon after the first cause-giving, the second follows, at which the hay receives a name from his father, by which only the latter calls him. Most newly

C. G. Schillings photo.

Fig. 19. Dancing women.

a small festival is also celebrated here. The most important cause-giving then not take place until the child can walk. On this occasion the hay receives the name that he bears as his principal name for his whole life, and, as he runs, an elder brother of the mother or,

/[illegible]/

553 lacking such, some older man of her lineage or tribe, given it to him. The festival that is celebrated in this connection is very similar to the one described above as the five name-giving, but considerably more magnificent. It is never lacking, whenever the other one is often omitted.

[504] [506] [illegible] /[illegible]/ In full battle array, but without weapons, the warriors assemble toward evening in their boat; they squat together, with a large number of young girls standing around, while those of them who are to receive the warrior baptism perform war dances with astonishing endurance, spear and shield in hand. After the new names have been agreed upon and have been called out to the men concerned, they are celebrated in impromptu verse. The names refer to warrior virtues, military exploits, or even customs that the men honored today were on the last campaign. This festivity is repeated on each of the next four or five days in a neighboring boat, to which the men newly named wander with a number of their comrades and a crowd of young girls. Thus the new names quickly become generally known and familiar.

551 Names that the mother or father give to their small sons, besides the ones previously mentioned, are the following: Kuiga = the long one who can reach up high; Lawiga, from [illegible] = two when lineage, after the line-named man; Ilalu, after a famous chief of this name; Samolu, after the chief of that that the cards are up while being drawn, may the sun acquire so many cards that their chief of that is very great; Ti Algawiku = pain, the copper coin commonly used in Sam Africa and worth two pfennigs. For a time it was [501] very popular among the island as an ornament and was worn as a small chain or as ring in the upper rim of the ear. Lalubik = thick lip. Names that boys received as principal names at the age of four or five are: Lamawat = the clever one; Kalaqa or Ialing = the fat one; Sawaiwat = the gun-with-trident; Ausiga or Ialaqa = darling; Ogaiga = given by God; Sualaui, after a now-called chief, whose

/Pg.1001/

951 [illegible] are seven: (1) [illegible] = the hard-[illegible]; (2) [illegible] = big hands; [illegible], after a like-named seer; [illegible] = the one who can do everything; [illegible] = the one who acquires many cattle; [illegible], from [illegible] = the hearth (Lithuanian deities).

As earlier cases I found: [illegible] = the brave seer; [illegible] = the seriously wounded seer; [illegible] = the dim seer; (2) [illegible] = the gay-[illegible]; (3) [illegible] = the terrible one from whom everyone flees; [illegible] = lion-skin cap; [illegible] = big spear; [illegible] = the ornamented seer; [illegible] = the gaily clothed seer; [illegible] = the four-horned seer; [illegible] = red cloth; [illegible] = white and red cloth; [illegible] = the impatient one.

As a married seer, the seer is named first of all after his first-born child, see as daughter, for example, [illegible] or [illegible] = father of [illegible], [illegible] or [illegible] = father of [illegible], but only as long as the child is living. After his death he is named in the seer very after the elder of his living children, and so on. After the death of his father and grandfather, the elder seer also adopts their names.

/(2)/ The name that the boy received as a baby he bears only until he is given his principal name. In later life he bears this as well as his name received as a seerlor and that of his father. Sometimes the one is more often used, sometimes the other. One seer therefore here just above the whole family history of a seer in order to know immediately who is meant by a name mentioned in conversation.

553 The blessed are not quite so extravagant, though still always very generous, with the names that a girl and woman bears. At the age of a few months the girl is given her first name by her mother. This name-giving is celebrated in exactly the same way as was described above for that of a boy. Despite the fact that the girl can never acquire (marked herself), the wording of the festival saying for a female infant to be "baptized" is the same and in this case means may your brother and your later husband give you much (marked).

[illegible]

553 As soon as the girl can walk she is given a second name, and, to be sure, by her father. For this a festival just like the preceding one is celebrated in some regions, in others a similar one, in which only the elder women of the local tribe part. On this occasion the girl she beside her mother or, if the latter is expecting a child, beside another wife of her father. Only the father calls the girl by this name; all other people and even the mother call her by the first name, which therefore remains her principal name. More rarely one finds the custom that the girl receives yet a third name during childhood. Where it exists, the mother, as well as the relatives and friends of the girl calls her by the first name, the father by the second one, and casual acquaintances and strangers by the third one. This third name-giving is also celebrated by means of a little festival.

The girl receives the fourth name, as a wife, from her husband immediately after her marriage. Only he calls her by it, or in place of it she simply "my wife," or [illegible], whereas other people designate her as before or as the wife of it. After the birth of her first child the woman is named after it, for example, figure Ibidibe = mother of Ibidibe. If the child dies, the mother is again named as she was before its birth. In later life she is always named after her oldest living child or simply Ibidibe, that is, old one.

551 The author found as five names of girls: Intawenge (from [illegible] = the heavens, sweet potato); Ualinge = the one who can with well; Gaea, this is what we call the smoothing of lips when drinking with to express to nectarous; Ulindi, after a like-named river Lambi, after the noise of a plant-like fruit; Kagee = Kwaeke fruit; Ibidgeri, from the word [illegible] = the stick; Kidjeie = the stubble; a word whose meaning is unknown.

[illegible] Second names for girls are: Ibendi, contraction of [illegible] = my mother; Ki gaiei = = my darling; Lawing = the light-skinned one, whose skin has the color of dark coffee with milk; Ibidgeri = Ibidgeri = the curly one; Dainen, after a like-named river; Cawinge, named after a tree. Of unknown meaning: Ibidibe.

Women's iron necklaces and ear-rings, and other matters.

The reason why women wear necklaces of iron and ear-rings (called 'surutya) is in order that it shall be known that they are married.

The Masai circumcise girls when they grow up, and these ornaments are worn to make a distinction between girls and women.

For if the women were left without the iron necklaces or the ear-rings, it could not be ascertained whether they were women or girls.

A Masai girl who has been circumcised is not called girl but woman. That is to say, she is called young woman until she gives birth to a child.

Even if she is very young, she is considered to be grown up as soon as she has been circumcised.

A woman is recognizable by three things, the ear-rings, the iron-necklace, and the big garment, none of which girls possess.

Girls wear beads, small pieces of iron wire (called 'seengani), and other trifles round their necks, and a small cloth. They also have chains in their ears, and armlets and anklets of iron.

Ñaidoy ol-kila ilo o e-mantai naio ta'n-ñolos ennn 'l-murran.

They wear one garment and a belt round their waists similar to the warriors.

Women wear nothing round their waists except a broad belt with which they fasten their garments.

They also wear two cloths, one called ol-ekennn, and the other ol-kiki'ishopo.

Now with regard to the women's ear-rings, they are of great consequence amongst the Masai, for no woman ventures to leave them off during her husband's lifetime.

Were a woman to take off her ear-rings and hang them up while doing her work, she would run into her hut on hearing her husband approach, and put them on again, so that he should not see her without them.

If a man goes away from home, his wife does not dare to take off her ear-rings, for were the other men to see her without them, they would tell her that her husband will hate her.

'Nerutya e ol-mamangus kae-'l-mirrak ee 'n-gulyatikitin.

ring, called il-giw'. They also have chain bracelets.

No Masai elder may wear the ornament called 'nerutyo unless he has children who have been circumcised and become warriors and women; but he who has grown up children may wear 'nerutyo.

There is another thing, an ornament called el-mamagwe, which is cut out of a buffalo horn or an elephant's tusk, and made to look beautiful.

No elder may wear this unless he has large herds of cattle and many children.

He who is well known to possess many head of cattle and also many children may wear this ornament as a sign of his wealth.

There is also an ornament called e-ray, which the warriors wear, but they only put this on as an ornament[3].

570. En-giwotkiwo en-'l-Masaai.

Ten ainaiyo el-nanani e-likua, ainjiki: 'Ilipai.' Ainainainaiko el-likua, ainje: 'Ilipa.'[4] Ten ainaiyo 'l-nanani kunuk, ainje: 'Enkutipai 'l-nanani,' ainainainaiko 'l-kulikua, ainje: 'Ilipa.'

Masai salutations.

When one warrior meets another, he says: 'Ilipai'; and when several warriors meet, one party says: 'Enkutipai, O warriors!' The reply to these greetings is 'Ilipa.'

[3] Il-giw (sing. el-giw) is also the word used for rings which young men, women, and children wear. They are made of iron or brass wire, and are frequently worn on the thumb as well as on the four fingers.

[4] A list of the warriors' ornaments, &c., is given on p. 290.

[193] [5] The *k* is often omitted, and the word pronounced ipa or eya.

When the boys have all been circumcised they are called 'Ilpiko (pulled).

They remain at home for four days, and horns are prepared for them.

They then only dress and shave as the young girls, their arrows being blunted with a piece of hemp-rope so that they cannot penetrate into the girls' bodies.

They also shave small 'birds', which they wear round their heads together with ostrich feathers.

The Ilpiko like to appear as women and wear the ornaments, earrings and garments reaching to the ground. They also paint their faces with chalk.

When they have all recovered, they are shaved again and become Ilolosi (the shaved ones). They then discard the long garments and wear warriors' skins and ornaments.

After this their hair is allowed to grow, and as soon as it has grown long enough to pluck, they are called Ilorosi (warriors)*.

The warriors are fond of the title 'i-...ilogok (the bulls) and 'Ilgumiloi (the generous people), for they may then wear bells or a bracelet called ilo-...ennyan.

How to become one of the Ilogok, a warrior must kill many savages,

[134] * The bird which the Ilpiko wear round their heads is the ...ennyi bird (...ilolosi, Shelley). Boys who behaved in a cowardly manner during the operation are not allowed to shave these birds.

* This word is commonly but incorrectly written Ilorosi.

MASAI CUSTOMS

[illegible]

One ol 'E-gwenisini two-tooth (i-wolig), ninkin 'i-kidiliwa 'e-gin.

[illegible] which the Gwenisini are shown if they frequently slaughter bullocks and give the meat to their comrades.

The eldest mujumi 'e-dolye ne 'i-Kimana, nemumi.

One ang-ebolig nemumi, ang-ebolig ol-kum ainki ol-kiteng, ol Ol-ebogo-kwinki, nemu kwi 'i-ngok.

Nemumi, ainje ti-ainu ol-Ilm, ten ainki, nemumi ne-ainki.

Ang-ibu ainje 'i-ngok nemu 'i-ngok, ol-mortiani ainu ngiku.

One ten ainki, nelyumi.

The girls' circumcision.

When Masai girls wish to marry, they are circumcised.

On the day that the operation is performed, a sheep or bullock is slaughtered, and as with the boys it is called 'Ilm (ceiling) which has round her to be taken out (from amongst the girls).

Women are operated upon indoors, and it is not considered a disgrace if they cry out.

Instead of the switch fashion which the boys wear, a switch made from the leaves of the Elgiboma (or dawa) palm, or of grass, is dressed.

When they recover, they are married.

E-mutia.

Ten ainki 'i-mumu ainki, ingwen ainkiyan ainkiyan Ol-mutia, ne ol-kulgani; ainu nenyu ne Ilgwenyu ainkiyan, nenia 'i-ngidan, ainki ne-ainkiy ilar ol-kulgani, nemumiayu 'ing-ingok a-nenyu ne Ilgwenyu, nemenia 'ing-ingok gani'[1].

One ye ainu, nemilki;

The feast called E-mutia or the selection of a chief[1].

If the warriors wish to select a chief, who is called Ol-mutia, they choose a man whose parents are still living, who owns cattle and has never killed anybody, whose parents are not blind, and who himself has not a disembowed eye.

When they succeed in getting such

[1] A chief called Ol-mutia is appointed for each sub-district. His duties are to keep the warriors of his sub-district together, and he is responsible to the chief medicine-man for their appearance in case of war. If a warrior disobeys the orders of his chief, he is flogged or ostracised by his companions.

[2] Ene (pl. ene) means the colour of a cow or bird.

On the whole, these two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord Hailey,* "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,* reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.* 233 [20] 19 [21] 22 [22]

The total population of all the Masai may be reckoned at about 165,700. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Uganda 1,433, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 35, 168. 162 [23]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 63

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njemps) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BEYER remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made 64 [24] 65 [25] 101 175

2: Bernardi E, 36-4 (no date) 1955 FL12 Masai FL12

cattle" and "red bulls". Hobley,[20] recorded two subdivisions of the Uasin Gishu, "the black striped cattle", and "the red striped cattle", which were, very probably, no other thing than the cattlebirds.

The Masai clans, *el piloto*, pl. *il piloto* or *en piloto*, pl. *en piloto*, are patrilineal and exogamous. Generally, they do not seem to be totemic. However, Hobley,[21] and the author of H.R. No. 49 have recorded the totem of a few clan totem. Fox,[22] refers also to the association of snakes with some clans.

The true exogamic unit of the Masai seems to be any individual unit, either clan or branch of the clan. A Masai may be adopted into another clan than his original one. The same provision applies even to an alien (Kikuyu, Dorobo). The adoption, however, never obtains the same social status as a full member of the clan. He is free to leave at any time, provided he returns whatever he was presented by his patrons, such as cattle or any other valuable.

The relationship between clans and their territorial distribution is not very clear. Analysis would suggest that in the past, clans were territorially separated. At present, there is still a tendency for members of the same clan to live close by to one another and occupy neighbouring ecosystems. Some sections are almost made up by members of a single clan. Thus, the *Molelian* clan is predominant in Kaputei section; the *Ainpuk* clan is predominant in Dalalekutuk section. Such facts, however, seem to be the exception. Usually clans are represented at a time in many different sections "There is no rule", writes Hobley,[23] "*governing the distribution of the various pilot* (clans); often members of as many as three *pilot* will be found in one *nwere engang* (elders' village) or a *nwere emapat* (warriors' village)".

Water and cattle are generally clan possession. When new water sources are discovered, they are claimed on behalf of the clan. All clan members who live in the neighbourhood are entitled to make use of them. A foreigner may also be allowed to water his cattle there. If disputes arise, they are settled by the council of clan-members on the spot. As a matter of fact, these water sources are the centre of ordinary social life, as Fosbrooke[24] writes: "The

[20] Hobley, l. c., p. 488.
[21] Hobley, l. c., p. 180.
[22] Fox, l. c., p. 488.
[23] Hobley, *Eastern Uganda. An ethnological Survey*, London 1903, p. 131.
[24] Fosbrooke, l. c., p. 42.

of so-and-so. When he replies to his name, he is told to go and make a profit. He answers "Hurts and finds". This is repeated four times, and the ceremony is over".

The ceremony is performed only once in a man's life, namely when he "wishes to have his oldest child circumcised". This particular circumstance shows that by "the passing of the loom" a man obtains a special elderly status which gives him a right to have all his children initiated.

Thus, there is a relationship between the father's social status and the initiation into the age-class of his son's. Even of these may be initiated when the father has reached the proper status. The personal status of the father is reflected on his children. Therefore the "passing of the loom" is not in itself part of the age-system initiation, but a condition which must have been observed before a man is allowed to have his sons initiated.

Other authorities (Fox) have stressed the fact that class membership of a Maori is somehow dictated by the class to which his father belongs. "The passing of the loom" gives a special emphasis to this fact and shows how a Maori's initiation into a class is conditioned by the social status of his father. It shows how the structure of Maori society stands on the balance of status of its members.*

"*The tearing of the ear*" (*Enchelmet of Ethang*).* Though this ceremony is performed by a single section or a group of sections, its performance has a far reaching value which is accepted throughout Maoriland. The ceremony is performed by such sections as the Kakenyake, the Dolelokotok and the Porko (all Kapil). According to Fox the Kisongo also perform it. But this is denied by Fossenova, who qualifies Fox's statement by saying that the Kisongo acknowledge and respect the value of the ceremony performed by the Kakenyake.

As a matter of fact special importance is attached to the ceremony performed by the Kakenyake, who in any case must be the first to do it and who have the lead in the matter. All the sections which

* The social balance between the father and his son is only an expression of a wider and basic principle, which, in our opinion, is an essential principle of Maori social organization: the principle of the distribution of power. See Fossenova, l. c., pp. 310 ss.

* Fox, *Notes on Marriage Customs among the Maori*, in *J. R. A. I. I. E.*, 43-45, 1931, pp. 160 s.; Lantz, l. c., p. 440; *F.A.D.*, 1886, p. 8, n. 11; (97), p. 18, n. 41; Fossenova, l. c., p. 27.

do not hold their own ceremony some be, or acknowledge, the Kakonyike ceremony. This is a point to be carefully noted.

Bukolomi is preliminary not only to the circumcision ceremony but also to any other initiation ceremony.

Three different stages make up the whole of the ceremony, namely the election of the master of ceremonies, the contest, and the sacrifice of a bull followed by the cutting of the age-rank.

a) The ceremony is organized by the elders. Their first task is to select a youth qualified to be master of the ceremonies (*el epolos el Kimoi*). They also must obtain his father's consent on payment of some bullies.

The ceremonies is kept secret because the office is not popular with the youths. The elders' mission is then aimed to relay that he may not escape, and tell what is in store for him.

Not every boy is eligible for the office, but only a member of the *Sogomoi* clan. The *el epolos* must wear the garments and the ear-ornaments (*serepe*) of the elders, whose status he is to be invested with, which same the reason for the reluctance to accept the office. The status of the *el epolos* is ceremonial and, according to Fox, he has no function outside the *Bukolomi*.

The *el epolos* has to supply the ceremonial bull, " without blemish, colour black with white breast ", [illegible] and the ceremony is completed at his village which is enlarged for the occasion. [illegible]

b) The day of the contest is fixed by the elders. In the morning the bull is taken back to the village, while the elders officially inform the *el epolos* to the other candidates. These are told to look up to him because he is their *el epolos*. Then, the elders enter the bull into the village and immediately the boys rush in to get hold of it.

Not all the boys enter the competition, only a few from each attending section. [illegible]

Members of the Kakonyike section make a point of being victorious. The contest is stopped by the elders as soon as victory is

[illegible]

[illegible]

[illegible]

[illegible] ceremony performed. The festival lasts three days, during which some of the candidates are allowed to leave the place. It is only on the third day that they receive all formalities and are allowed "to wear the sleeve".

The fourth day after the sacrifice, all candidates are informed by their leader that they are free to return home, and on doing so he warns them that they must be honest and loyal. With this *Bahagaro-Baghdale* is over.

The relationship between the elders and the candidates, the *ti pirow* relationship, offers a special subject of analysis.

As stated above, the elders in question are members of the clan next but one above the clan to be formed by the initiation of the candidates. The gradation marking the two clans perhaps offer the clue to discovering why the sponsors of the candidates must be members of a definite clan. We know from the rhythm of Moon clan-system that the clan next but one above the clan of the candidates is generally the clan of the fathers of the candidates. The pirow-elders, therefore, possess the same social status as the fathers of the candidates. Hence, being on the same social level, the pirow-elders possess the social capacity to be sponsors for the candidates. Such sponsorship brings about a mutual relationship between the two clans, a relationship respected by members of the clans concerned throughout their life.

The pirow-elders have a real authority over the candidates so that no ceremony connected with initiation may be started by the candidate without the approval of the elders. The pirow-relationship is officially established at the *Bahagaro* ceremony.**

[illegible] their blood is drunk in turn by the sponsors and all candidates. Then two of the elders cause the face of the candidates with the leaders' blood. The elders must be of the 'right-hand' sub, but they are assisted by two of the 'left-hand', who take their place when they are tired. The meat is distributed among the elders (if sponsors, i. e. the last initiates, are attending, they are not supposed to be seen eating meat in public), and the meat sacrificial into clogs are prepared for all those present. All the time the bones of the animals are watched to prevent stealing for the purpose of magic, and finally they are burnt out and all the remains buried underground.

** That the pirow-elders take a strong view of their power is shown by a case reported by Pomeroyen, pp. 18 s. In February, 1906, after *Bahagaro* had been performed, "a *Zuwi* elder (i. e. senior elder, member of the clan next but two above the candidates of the time) decided to circumcise his two sons, and hewed bow in preparation for the event. The local *Zuwi* (the pirow-elders), hearing of this, determined to stop him, marched into his house (ob-

[illegible] (see date) 1955 FL12 Sheet FL12

[illegible] not possess cattle of his own (cattle are the property of his father), and therefore he [illegible] not form his own family which will not help us. He may not eat meat in public; he may not drink milk on his own, but only with [illegible] of his age-unit mates; he is expected to live in a special [illegible] quasi village; and as a member of the age-unit, he is, individually as well as collectively, under the social and political authority of the elders. Finally, from the military point of view, although he is allowed to take part in raids or other police actions, he is still considered a learner and is expected to accompany the senior initiated in order to be trained properly.

The expression, then, "becomes a man" is merely an anticipation of a status not yet attained but towards which the first apprentices may be seen to [illegible].

[illegible] Individual initiation causes a boy to become a full member of an age-unit, and thereby he is introduced into the active and governing sections of society. Indeed, in the present cultural situation of the Masai, circumcision is the main ceremony of individual initiation, and is the essential requirement for unit and class membership. However, the initiate's membership into a definite unit or class derives primarily not from his individual initiation, but from the initiation being performed during the period for the initiation of that unit or class. It is, therefore, from finding himself within a definite period that a Masai initiate obtains a definite place in the structure of his own society. Indeed, this structural effect of time on the initiate is the essential point of the age-system as a phenomenon relevant to social structure.[illegible]

V — THE AGE-UNITS AND THEIR MUTUAL RELATIONSHIP[illegible]

The two age-units of a class are called respectively "the right-hand circumcision" (*enwarie ebulwa*) and the "left-hand circumcision" (*enwarie ebulwa*). These two units are instituted in turn, in succession of time, "the right-hand" first, "the left-hand" second. That succession is usually expressed in terms of seniority, as we see below.

Each age-unit, however, is further subdivided. These subdivisions are formed by all those who have been individually initiated

[illegible] *Masai*, p. [illegible], on structural time, and pp. [illegible] on structural progression and structural permanence.

S: Bernardi E, 56-4 (no date) 1955 FL.12 Mawai FL.12

during the same season. Pennacchi states that "circumcision", [54]
or better individual initiation "is usually performed during or at the end of the rains, a time of plenty among the Kikuyu,[*] and is suspended during the dry season".

It is, therefore the seasonal rhythm that causes a further division of the period for the institution of the age-unit and thereby brings about the minimal divisions of the age-class. The phenomenon is in some way due to the nature of things. Indeed, as Pedrazzoli continues, "it is natural that those circumcised in one season possess a marked feeling of affinity towards one another. This shows itself in the possession of a group name for each batch, the same names being employed from generation to generation".[**]

There is no need to stress that "the possession of a group name" indicates that a special group has been instituted.

Within the period for the institution of an age-unit, i. e., between the performance of two successive *Indengery-Ingohoto*, individual initiations take place, according to Pennacchi[***] during four rainy seasons, and therefore four minimal age-divisions are formed as follows: (1) *A Chengen-ngiir* or *A Kiporo*; (2) *A Paringoiroi-long*; (3) *A Kirindet*; (4) *A Tarmo*. Mondon,[†] and Hobley,[*] state that the minimal divisions were three.

According to Mannoni, (1) *A jangen ebir*; (2) *A baringe dwalion*; (3) *A gerindet*, and this last is said to be the youngest: "*ber jangen Ankipang*". But Mannoni states also that a fourth one is added, called *A ciropen*, which is formed by those who are initiated immediately before the performance of *Ingohoto*, i. e. before the proper period for individual initiation, or circumcision, is closed.

According to Hobley, the following is the order of names:
(1) "*L-chengen-ngiir* — the big entirely healthers; (2) "*L-tarmo* — the helpers; (3) "*L-paringoiroiong* — our fast runners.

It is not very clear what function these minimal divisions perform in the internal structure of the age-units. It is clear, however, that, being they formed in a succession of time, they define the [55]
status of seniority among the age-unit members and foster that

[*] Note how succession ("a time of plenty") influences the holding of an initiation festival.

[**] This means that the names of these minimal divisions are always the same for every class.

[***] Pennacchi, l. c., p. 38.

[†] Mannoni, l. c., pp. 70 s.

[*] Hobley, l. c., p. 368.

[illegible] feeling of corporate responsibility and membership, which is a typical feature of the age-class system.

It seems certain that the left-hand unit does not group as many members as the right-hand unit. According to Fumanesh, the left-hand unit is formed only by the three last-named minimal divisions; Fox states that it may not occur at all.

The following tables illustrate the situation.

[illegible] The first table is reproduced from Fumanesh (1[illegible]).* It refers to the number of age-unit members in four different places of the Kisongo section:

PLACES		Kibaya	Namanga	Engaresero	Longido	TOTAL
Right-Hand Unit	Kimaio	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Left-Hand Unit	Sinyolo	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

The total percentage of members of the left-hand unit as compared with the right-hand unit is therefore [illegible]%.

The second table is taken from Fox (1[illegible]). It refers to the names of the age-units:

SECTIONS	Purko	Loita and Siria	Dorsai
Right-Hand Unit	[illegible]	[illegible]	[illegible]
Left-Hand Unit	[illegible]	none	[illegible]

SECTIONS	Kaputei Lukiki Ini Mangati	Lukidoto	Kisongo
Right-Hand Unit	[illegible]	[illegible]	[illegible]
Left-Hand Unit	none	none	[illegible]

[illegible] Though the value of these tables is far from being absolute, they show that the right-hand unit is far more relevant than the left-hand unit. Indeed we find that candidates are far more anxious to join the right-hand unit than the left-hand unit. This may be explai-

* Fumanesh, *l. c.*, p. [illegible]; Sikaraka, *Some Problems of Anthropological Research in Kenya Colony*, in *I. A. I.*, Memorandum XXIII, 1[illegible], p. [illegible]. The data is taken from Sikaraka, p. [illegible]. Sikaraka refers to the paper of Fumanesh as a manuscript. This was published in 1[illegible].

and by the status of seniority which is higher for the right-hand [F'L.]
unit than for the left-hand unit.

To study how the seniority status of the age-units affects the structure of the age-class may be useful to our analysis.

The right-hand unit, being the first of the two-units forming a class, is senior to the left-hand unit. A class, however, is not an absolute institutionalized set of persons, but it is related to other classes below or above itself. Therefore, the two age-units of a single class must also be considered in relation to other classes.

The right-hand unit at the time of its institution has no actual relation to the left-hand unit for the latter does not exist yet, but it has relation to the class next above itself and particularly to the left-hand unit of this.* Such a relationship makes the right-hand unit junior to the left-hand unit of that class next above. At a later stage, when the new left-hand unit is instituted, the right-hand unit in question becomes a senior unit. The senior right-hand unit and the junior left-hand unit will finally merge into a class. Therefore, if a class is regarded as an absolute body, the right-hand unit is the senior and the left-hand unit the junior. But if the class is viewed as a related body, both the right-hand and the left-hand unit pass through a first stage of juniority, and a successive stage of seniority.

It is important to stress that in the structure of a single age- [F'L.]
class the right-hand unit is always the senior unit and the left-hand [F'L.]
unit is always the junior unit.

The status of seniority, as contrasted to that of juniority, is not a mere abstraction. It gives rise to some special privileges which are reported by Fonsecca as follows: (1) "the marking on the shield known as *mawai ungubi*;" (2) the spear handle of black wood called *rujuta mawai*; (3) the right to hold a dance without seeking permission

* One should note that a class is finally instituted, i. e., the two age-units merge into a new single age-set, when the first unit of the next following class has been instituted. See below on the discussion on the overlapping rhythm.

* According to Rassam, p. 76, there may be six marks in the coat-of-arms of Kassi warriors which they paint on their shields: 1. the warrior red mark (*ne wal'ungu*), to which Fonsecca refers; 2. the black mark (*ne wal'wal*); 3. the ceremonial hoof; 4. the coat-of-arms of the clan; 5. the mark of leadership (*Kuyumbalwalumbu*); 6. the mark of bravery or distinction. Of all these marks the most important is the warriors' red mark (Fig. 1. The mark of the clan was rare in Rassam's time. The mark of bravery is reserved for the warriors who distinguish themselves in military action. The shield of the junior initiates (*il kawak*) is poor in colour and pattern. They are allowed only the black mark; the red one is reserved for the senior initiates. [F'L.]

[illegible] from the senior moran". To these, according to Simeron, p. 66, should be added the formation of the initiated segregated village (manyatta).[illegible]

The behaviour set up by seniority relationship is one of open rivalry between the two adjacent units. Members of the senior unit look down with contempt on those of the junior unit and the latter retaliate as best as they can. The conflicts and clashes which ensue seem to be accepted as a normal social institution and in fact they are looked upon with favour.

Fosbrooke,[illegible] notes that initiates make no formal demand for the above mentioned privileges of seniority. "The juniors", he writes, "will assume one of the privileges, and when met by a band of seniors will promptly be beaten up and retreat. This process continues till seniors become frequent in these affairs. When the seniors feel that they are on the point of losing their seniority, they gradually hand over these privileges to the juniors, who may then proceed to the Uwate ceremony". A detailed description of the same process is given by Simeron.[illegible]

The claim for the privileges of seniority and the Uwate ceremony mark the final stage of the official period for performing individual initiations and therefore for instituting the age-unit. There is a certain regular interval between these ceremonies, which our informants say to estimate in terms of years. It seems, however, that the deciding factors are, the adjustment between the senior and junior initiates, the former handing over the privileges of seniority to the latter, and the agreement of the pros-elders that the proper time has come for closing the age-unit period.

VI – THE FINAL INSTITUTION OF THE AGE-UNIT[illegible]

The final institution of the age-unit is brought about by the performance of the Uwate ceremony. This is described by Fosbrooke,[illegible] as "the ceremony of promotion from junior to senior

[illegible] Fosbrooke in his chart, p. 34, puts this immediately following the period of the individual initiation (circumcision) of each unit.

[illegible] Fosbrooke, l. c., p. 36.

[illegible]
[illegible]

system. Unfortunately, no such information is available. Hanson,[illegible] describes the actual action in detail but from a purely tactical or strategical point of view.

[illegible]
[illegible]

Special distinctions may be attained by the initiates either in military actions or in social life. Thus, if a warrior is outstanding in war for his courage and he "kills many savages" (Bizzum (n) he is called "the bull", *ol ongoh*; if he is liberal and through the assistance of his father "frequently slaughters bullocks" for his comrades, he is called "the benefactor", *O gaoriel*. These distinctions as described by Hanson,[illegible] would suggest the existence of special offices with structural significance. He states that "the bulls" play a leading role (see Ethnologic Bulls), and are the leaders in the fight ("We shot the Jabbers on Kaugi"); "the benefactors" retain a special position (see benefactors ceremony). It seems, however, that there are no such institutionalised offices as "the Bulls" and "the Benefactors"; they represent two different distinctions which may be attained by any of the initiates. This seems to be the opinion also of Bizzum,[illegible] where he states that "the warriors are fond of the titles '*O-ongoh* (the bulls) and '*O gaoriel* (the generous people), for they may then wear bells or a bracelet called *O-kwagan*".

[illegible]

The internal structure of the age-unit, we may now conclude, is based on various principles, which give shape to different groupings.

The essential principle is the contemporaneity of initiation either during the same season in which the minimal age divisions are instituted, or during the same initiation period in which all the minimal divisions merge into a single age-unit.

[illegible]

A second principle is the residential principle, on which the *mangatin* and the *ainli* are organised. The *ainli of bul*, or the grouping for the meat festival in special segregated huts also seems to be due to this principle.

[illegible]
[illegible]

The military principle seems to give an special military aspect to the *ainli* proper, as found in the *mangatin*, and, apparently, the same principle extends to the temporary capillary formation of special partnership between two fighting warriors.

[illegible]

Corresponding to these various groupings there are leaders, as mentioned above, who organise their age mates in the performance of the various ceremonies and functions of the age-unit. It is very

[illegible] Hanson, l. c., pp. [illegible] ff.
[illegible] Hanson, l. c., p. [illegible].
[illegible] Hanson, l. c., p. [illegible].

[illegible] close to the exclusion of other classes above them. Their status is [illegible] of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of conscripts it is wrong to say that military activity is solely their privilege.

[illegible] Residential segregation is generally connected with the military activity of the initiates. Kenyatta states that the camps were entirely situated in the strategic positions of the country.[illegible]

[illegible] But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are also forbidden to eat meat "cooked by women", and because their mothers and girls reside with them in their villages, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[illegible]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-sets are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the full possession of any cattle; the share of their mother's cattle to which they have right remains the property of their fathers' until they get married. And to the father goes the best part of the booty which they take from a raid.[illegible] Since cattle are the primary source of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their grow-elders.[illegible]

[illegible] The statement is endorsed by Hobley's description l. c., p. 91. He says that the camps were always built free from any kind of cover, "if possible on a plateau overlooking a good water supply", and "commanding many miles of plain".

[illegible] The initiates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their grow-elders.

[illegible] Hobley, l. c., p. 30. "Das Verbleiben der zu Krieger heranwachsenden Söhne bedeutet in erhöhtem Maß und dient in der Kenyaneke zur Kurbe der Vater".

[illegible] Other restrictions such as the prohibition against smoking and drinking beer, both privileges of the elders, confirm the general status of inferiority of the initiates with relation to the elders.

2: Barnardi E, 90-4 (no date) 1995 FL12 Wawi FL12

[illegible] " I say, there are no longer of moran (a circumcised, a warrior), [illegible] not of moran (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the companions of the warriors there are now an elder ".

" After this feast ", remarks Worsnop, " it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in the father's kraal or in the warriors' kraal (manyatta) until all his age-mates have married. Only then he is recognized as of moran, each one builds his own kraal and lives amid the clothes, decorations and the pigtail of the warriors ".

It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet " recognized " as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married, in which time only the status of elder becomes for all purposes official.

A very detailed description of " the spitter of milk " is given by J. V. Downes, but the ceremony is mentioned also by other authorities. Fox,[illegible] states that " this ceremony is performed by each warrior individually ",[illegible] and Downes tells us that it occurs at the village of the initiate's father and that four pure-elders take a special part in it.

The ceremony is preceded by a dance. The candidate is clothed in women's clothes and the first two of the elders place women earrings (mwaigo) on him.[illegible]

A test follows, in which the candidate is expected to confess how many times he has " stolen milk ", i. e. taken milk by himself or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the best senior, about " what he must and must not do after he has drunk and become an elder ". He now drinks the milk, " very little however " at this

[illegible] Fox, *l. c.*, p. 428.

[illegible] He says also that " the ceremony usually takes place nowadays a year or two after the *E-unoto* owing to the Government policy of reducing the period of warriorhood as much as possible ".

[illegible] These ear-rings, *mwaigo*, are also worn by elders. For this reason some of our authorities describe the mwaigo put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a feminine type.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 of these associations (the age-units) have long been married, the *ol oiboni* (the prophet) binds them more closely by giving a common name to both age-classes[164] each of which, as we have seen, had its own name. This takes place at *ol neher* feast. All the members of the associations come together at the *ol oiboni's* place and build a great kraal near his village. Everybody brings honey for making beer or an ox for meat. This last is then killed by suffocation at the *en gebata* feast. The feast consists in consuming all these things, and its climax is the proclamation by the *ol oiboni* that from now on all the assembled people shall belong to a single *ol adji* (age-class), and have a common class name".

561 624 Fosbrooke,[165] states that "a single official, *ol-loo-surutya*, is chosen as the head of the whole generation (age-class), thus symbolising the union of the two ages (age-units) which have up to now been independent, each with its own *launon* or ceremonial leader".

561 It is after this feast that "those who are not yet married do so at the carliest opportunity. Those who are married, if their fathers [591] are still alive, move off from the paternal *boma* (village); for they are now in complete control of their cattle, and if they stayed with their fathers there would be constant bickering on animal husbandry matters. It is also this feast that "pigtails are cut off and are not allowed to grow again, the new elders may drink milk alone, eat meat that married women have seen, carry about short bladed spears (*embere sero*) in place of the long polished warriors' spears, in fact all the customs of warriorhood are abandoned".[166] In other words through the *ngeherr* ceremony initiates reach a complete [554] social and economic independence and become full men or elders; they may beget children, own their own stock and build their own village or 'gate'.

There is no doubt that the value of the *Ngeherr* proper for the institution of the age-class is equal to that of *Embolosat*. This is stated by Fosbrooke.[167] He writes: "Just as the Kakonyuke ceremony of *Embolosat* starts off the age (class-period) for the whole tribe (read = the whole Masailand), it appears that the Kisongo *Ngeherr* closes it throughout Masailand". This value of *Ngeherr*

[164] Read – age-units (my terminology).

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 immediate interest are in the main of a private nature, and their
885 share in tribal or public affairs is a minor one. They try to enhance
[554] their social status by increasing cattle, marrying other wives, and having their sons initiated.

The *senior elders* have a full share in political life. It would even
561 be correct to say that this is their privilege, and theirs is the class
642 in power. Their sons are ready for initiation. Therefore it is upon their class that falls the duty of undertaking the institution of a new class by controlling and performing all the proper ceremonies. It is from such duty or privilege that the so called *piron* relationship is derived. It is a mutual relationship by which, on the one hand, the elders pledge themselves to assist the candidates, and be their sponsors, and, on the other hand, the latter revere the elders' authority and follow their advices. Thus the *piron*-elders control the main branch of social and political activity, namely the institution of a new class. And, because the initiates, both junior and senior, constitute the strongest body of the military force even this other branch of political structure, namely military organisation and activity, falls to some extent under the elders' authority. The peculiar nature of Masai society makes it out of place the search for individual political leaders, but if we want to express ourselves with usual terms, we could say that the *piron*-elders are the true political leaders of the Masai.

561 The three classes of *the old men* are the classes which have retired.
887 In practice they take no further active part in political life, but are concerned with religious ceremonies in which their presence is greatly considered. Their number is naturally decreasing and the few survivors of the last classes are generally dotards. When possible, these survivors, particularly the former leaders, are consulted when tradition is to be ascertained.

561 Analysis shows that the prerogatives of the age-classes are common and proper to all their members, and it shows also that the number of class-members, after the class is constituted, is so closed as no member is any longer accepted into the class.

Junior elders succeed seniors in political leadership when the institution of a new class is officially opened. The phenomenon takes place through the rhythm of the age-system ceremonies.

In this connection FOSBROOKE,[173] speaks of a handing over ceremony performed by the senior and junior elders. "The mat-

[173] FOSBROOKE, l. c., p. 32.

561 Soon after the *endungare* ceremony, the elders take three or four of their charges to visit the " medicine man." They take with them three or four new gourds as presents for the " medicine man," who is called *ol-oiboni*. They must also take with them the bark and root of a tree called *imokongore*. I have not been able to identify the tree; [824] it is said to be scarce and is not found in the Loitokitok area. The root and bark are ground to powder and used to make a medicine named *emasho sirua*, an ingredient used in the preparation of a wide variety of charms. The elders inform the " medicine-man " that they have broken the fire-stick and present the boys to him and say " *Ol piron lang elle, kira nalo* "—" This is our fire-stick, we are one."

561 On their return home the boys' leaders seek one of their number to appoint as their spokesman called *Ol ai gurenani*. They make no 624 special efforts but during the many debates, to which they devote much time, they note those who show special ability; but ability to [537] speak well is not in itself sufficient; there are other considerations of far greater importance.

There are certain families whose sons must not be chosen for they would certainly die if elected; again, the counsel of other families has an evil reputation and must be avoided. Nor would it do to select a spokesman from the *Endigongi* or medicine-man section or from the clans reputed to be unlucky.

The ideal *l'aiguenani* is one born of Masai parents in Masai country of a family from which *l'aiguenak* of former age-groups have been chosen. He should be wealthy if possible and a member of a lucky clan, must be energetic, not given to favouritism, and known to be fond of his tribe. That he should be an outstandingly good speaker matters not, provided that he satisfies the other conditions. It is said that his efficiency in debate will improve after he is appointed.

The names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves. It is particularly a matter for the leading boys of whom there are probably several by this time. [554] They are called *ingopior*, and are those who have shown ability and strength of character during the many debates already held.

Usually a *l'aiguenari* is chosen from among these *ingopior*. They discuss the matter secretly amongst themselves sending off one of their number on some pretext in order to be able to discuss him freely. When a decision is made the boys call some of the *il-piron* elders and send for the boy chosen. When he comes the *ingopior* say to him: " *Iye kintaa ol'nguenani* "—We make you our *aiguenani*. If he

Kenya

614 The name of the main group 'Loodo mongi is very liable to be confused with that of the sub-clan 'Loodo 'Kishu because the former means "the blood-red bullocks and the latter the blood-red cattle."

It is further difficult, if not impossible, to know whether to treat some of the divisions as clans or sub-clans.

The two words used by the Masai are *Ol gilata* (the clan) and *Enkishomi* (the sub-clan). But these words are not much help to the enquirer, because the Masai use each to some extent interchangeably.

Hollis, p. 260, speaks of a group of Masai called 'L-Oikop or Il-Lumbwa. I have been unable to discover these people. The tribe called Lumbwa, which lives to the west of the Masai area, is quite different in language and customs from the Masai, being similar to the Nandi. [101]

Some clans are associated with certain snakes as under :—

'L Aiser ol Orasume Orok (the black cobra ?), 'Lughumae ol Asurai Rongai Orok (the thin black snake), Il Darosero ol Asurai Sero (the brown snake), Il Molelian all snakes.

597 *Adoption.*—The Masai like to adopt children, and even grown men, of other clans and other tribes, who may help them to herd their cattle. Of recent years they have also shown a tendency to adopt Kikuyu cultivators to plant maize for them in the more fertile areas Nairagi Engare and Il Melili, west of the Rift valley. [563] [241] An adopted person is called *O-Singa*. Having been adopted he is regarded as being a member of the family and clan of his adoption and has nothing to do with his former clan. He may even marry a woman of the sub-clan of his natural father, provided that it is not also the sub-clan of his adoption. But he may not marry or have sexual intercourse with a woman of the sub-clan of his adoption. Accordingly, an adopted Kikuyu may call himself a Masai, and even though he may be unable to speak the Masai language he is not telling a lie according to Masai ideas.

When a man or boy is adopted as a herdsman he is treated by the head of the family as one of his own sons. He is given his herd of cattle and is helped to marry a wife. But if or when he elects to leave his adopted family he must go empty handed as he came, leaving behind him such cattle, wives and children as he may have acquired under adoption.

[554] An adopted man takes an inferior position socially to a well-born Masai. He would not in practice hold any important position in the tribe nor be able to marry a well-born Masai woman.

361 428 *Inheritance. Arrangements of Wives' Huts.*—Before dealing with inheritance it is necessary to explain briefly the arrangement of huts in a village in order that the terms "right of the gate" and "left of the gate" may be understood.

561 warcry of old: 'I am the son of So-and-So,' and 'I am the Son of
535 Such-and-Such' and drive their branding irons into the outcrop.
[386] They fill their gourds with it and then return home and are
[574] treated with great reverence at Masai villages *en route*, being fed
[262] on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 50 yards apart, and marched to the village. Many wore ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured crescent-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: '*Endopok!*'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group led by an elder blowing a kudu horn (one of the very few Masai
[534] musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the *O-Singira* hut.

561 Late in the afternoon of this day the mothers of the 49 'pure
[302] ones' shave their sons' heads. All the hair, eyebrows included, is
[413] removed by means of a spatulate Masai razor. Milk is used in place of soap. Whilst being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the *Ol-Oruno* and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family
[825] home. Great care is taken that none is left lying about in the open
[554] in case birds should use it for their nests—a grave affront to the young men's sacred role.

During the course of the day the branches used as night barricades between the houses were replaced with new ones bearing
[789] green leaves. This is a symbolic act, meant to ensure that the *muran* may flourish as 'green bay trees.'

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the *Ol-Oruno* from his father, is driven into the bush and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the *muran* gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' whilst their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the *muran*, naked and still whitened with diatomite, came running back to his hut. There he received a deafening welcome from his family, whom he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of *muran* leading their families round the *O-Singira*, everyone shouting and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the *Ol-Oruno*'s heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'pure' 49 arrived, their shaven heads gleaming, white circles of diatomite like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the *O-Singira* whilst the *Ol-Oruno* was led to his hut. In front of his doorway was placed the hide on
[351] which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The *Ol-Oruno*, who seemed all too conscious of his role of scapegoat, then sat on the stool.

595 /27 cont./
[736] see in their position as secondary wife lasting or temporary maintenance. Each wife has her own hut, in which she lives with one or several small children and manages an independent household. The woman married first is the principal wife (en aitero eng an) (1)

1. = the first in the kraal.

and remains such until death; then the woman married next after her steps into this position. The principal wife is supported the
[422] best, in that the husband surrenders to her a large part of his cattle for the usufruct and treats her with distinction before the other wives by means of gifts of ornaments and clothing, as well as by better service. /28/ Her eldest son has prerogatives in the right of succession. The principal wife exercises supervision over the other wives and keeps them at the work when they neglect it.

The domestic community does not have any common property.
422 As property there comes into consideration first cattle, goats,
[554] sheep, and donkeys. The size of the herd is the gauge for the social position of its owner, the father of the family. The cattle
[428] handed over by him to each of his wives for care and usufruct remain his own, and only when the wife has a son about ten or twelve years old do they pass, with his consent, into the latter's possession, and sometimes into his ownership. /Ill. 9 appears here./ A presupposition for the latter, however, is that the boy is not needed in the tending of the paternal herds. For as soon
[591] as he receives the livestock, he must leave his father's kraal, along with his mother, in order to lay out a small new kraal for himself at a distance of several kilometers. This is supposed to prevent the two herds from coming together, an opportunity which otherwise the son would often enough take advantage of
422 to steal from the father. Huts and household implements, both
423 only of slight durability and little value, theoretically also belong to the father of the family, but in practice to those of his
[462] wives who use these things. The woman builds the hut, whereby the children or other women help her. What is not used in

000

/73 cont./

561 634 [791] [787] After he has counted off the little stones of his oracle game for a while, he decides that N., the son of M., is to become ol aunoni. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol [554] aunoni who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol borõr members there and, with these, again set out for the ol oiboni. Then a very large hut (os siñgira otunigi) is built there. When it is finished, the speakers take a number of warriors into their confidence and tell them who has been named ol aunoni. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon [301] [291] as this has been accomplished, a few of those standing around him push him down onto the stool, others place a string of blue ring-beads (ñ gonoñgo) around his neck, tie the spiral ear ornament made of copper wire (e surudia), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (e megiti) of the warrior, and in its place drape around him the long one of the married (the ol gela l ol moruak). Finally all those present cheer the new ol aunoni and cry out tadarawá jo ijõk eñ gischon, that is, remain poor, [556] bring us luck. The Masai in general maintain that every ol aunoni has remained poor; if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain [431] denied him. But he does not need it, for every man under him is obliged to give to the ol aunoni visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of foodstuffs always prevails.

[574] [721] After the ol aunoni festival is over, the other ol borõr members wander back home and celebrate a long meat feast (ol bul), whereupon they /74/ usually set out on a war expedition, while the ol aunoni himself goes back to his kraal and remains there.

[Warrior Kraal]

/86 cont./

701 speaking, yet their facial expression usually remains unchanging,
531 neither agreement nor difference of opinion may be read into it. The orator is not interrupted any more than he is forced to become silent by the restlessness of the listeners. Each one is allowed to deliver his speech unhindered to the end. We have here the simple flowing speech, in contrast to the dialogue type of the Negroes, where another respected man stands or squats opposite the speaker and at every punctuation pause, at every comma of the speech given jerkily in choppy sentences, makes known by an unbelievably stupid-sounding, more or less grunting ɛ̄, ē, or hm that he has understood the words spoken. The task of the speaker consists chiefly of arousing, by means of a feigned friendship with the chiefs of livestock-rich peoples, in the latter a blind confidence in the Masai, /87/ which
701 will facilitate for the latter a sudden, predatory attack. Moreover,
726 he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether he perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most livestock might be, where they pasture,
701 where they stay at night, where the fewest warriors live, etc. The
[554] speaker himself need not be a brave warrior; rather, cunning, deception, guile are the characteristics that qualify him for the political aspect of his office.

Another task is the administration of justice incumbent upon
[692] him; he is the deciding judge in civil and penal matters for the warriors of his kraal.

701 A leading role among the warriors is played, furthermore, by
554 the el oiñok (1)

1. Sing. ol oiñoni.

(= the bulls), of whom there are five or six in every kraal and who gain their position by courage and bravery in war, as well as by superior physical strength. They are the leaders in battle. As a
[714] sign of their rank they wear, in dancing and in hand-to-hand
[534]

[Warrior Kraal]

/87 cont./

701 554 [714] [534] fighting, large leg bells (el duallan kitwa), the tinkling of which in the latter instance serves to prevent a going astray by the individual warriors and a scattering of the troops. Where the bell sounds is a rallying point.

A special position is also occupied by the ñ gǎminini = benefactors. [556] They are warriors who, themselves generous, also have a generous, well-to-do father. From him they often receive oxen for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

701 703 577 Accordingly, miserliness is sharply condemned, and a miserly warrior or one who has miserly parents is treated badly and, in case of illness or wounding on the way, is not infrequently left to lie helpless.

701 578 [554] Speaker and leader live like other warriors and are not surrounded by any special ceremonial. Off duty they are treated with respect, which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to dueling, in which the opponents go after each other with sword and club, but only very rarely [683] wound each other seriously. If this should happen sometime, in a few districts the wounded one receives from the victor a fine con- [431] sisting of livestock; in other districts, only if a bone is broken. In general immediately after the duel /88/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also 701 the exchange of the skin cape (e megiti). The matter becomes more 578 serious if one is killed in a duel. First the father of the victor is then 682 condemned to pay a larger number of cattle. If he hands them over, the affair is settled. If he refuses them, however, the friends of the man killed attack his kraal and rob him of his entire herd. But they have scarcely brought them home before the friends of the one robbed also try to rescue them again. This goes on until they have become tired

/119 cont./

593 The Masai are animated by a deep feeling of solidarity; they
181 stand united against all foreigners. A sincere attachment and love
[186] bind the individual members of the family; they vie with one another in order to free a relative who has fallen into slavery. Thus, in 1896, the Masai who returned from the Berlin Exposition immediately used the greater part of their savings to buy back relatives who had become slaves during the great livestock epidemics around the year 1890. The tighest is the bond between parents, especially the mother, and children, as well as between brothers and sisters, looser between married people, where the lowly, oppressed position of the wife is of some importance.

181 The men scorn any kind of work. Only waging war is worthy of a
461 man. Large herds of livestock and many wives are his supreme
• 554 happiness. One who has both enjoys respect and prestige. One looks down on a poor devil. Truly poor people, however, are exceptions,
735 since relatives support one another in generous ways. One who does
602 not have such quickly finds accommodations as a rule with one who is well-to-do. He receives food and for that helps the women and children of his benefactor with their work (livestock-tending, kraal-building, night watch for the small livestock, etc.). The condition of /120/ poverty is also always only of brief duration; the poor man soon acquires some prosperity again through gifts from friends or a
574 share of the spoils of war. Toward friends, one is just as generous
[572] as one is good-natured; the hospitality to countrymen, no matter where they come from (with the exception of the blacksmiths, of course), is unlimited. Everyone offers a visitor whatever he happens to have in food and drink. Everything that the stranger needs or wishes is at his disposal. He reserves for himself a hut for the night
[837] by sticking his spear in the ground in front of it; the host then seeks other quarters for the night and leaves home and wife to the guest. If a woman comes for a visit, the wife leaves the hut for the night, so that the stranger may take her place. Hospitality toward other peoples is known only if peace is concluded with them through the ceremony of infant exchange or through blood friendship. The
181 cruelty of the Masai is no greater than that of the other black peoples, for example, the Negroes neighboring the Masai. If they

/144 cont./

301 yellow long-tailed monkey (Cercopithecus pygerithrus, eñ dorâsch),
237 the black long-tailed monkey (C. albigularis, ol gêma), the honey
[136] badger (Mellivora ratel, ol belés), and a few other smaller animals.

301 Around the right wrist, often covering almost the entire lower
554 arm, those warriors who are generous and benevolent, the ñ gamnini, wear a cuff (Fig. 56) that consists of rows of iron beads (el dorongên or el gabaten) put close together, in whose place in more recent times appear ordinary small -- especially blue -- glass beads. The iron beads are made by pounding flat small wire rings and then /145/ putting these, strung on thin strips of sheep leather, around the lower
[431] arm and knotted on the inner side of the arm. Those people who constantly enjoy the kindnesses of the ñ gamnin express their gratitude from time to time by giving a string of such beads, so that, as was said, the ornament often extends almost to the elbow. More rarely than among warriors, the ornament is also found on one or
[431] another of the young girls living in the warrior kraal. If a girl has
[593] no brother belonging to the warrior standing, but does have a wealthy father, she receives from the latter both milch cows and an occasional

301 /145 cont./

[554] [431] [593] piece of slaughtered livestock. She then generously distributes milk and meat and thus acquires the position of benefactress.

The arms and legs of a beauty, except for the thighs, are stuck into a more or less complete armor of tubes of iron wire, which often leave only the knee and elbow free, while among poorer women this adornment shrinks to a few coils. These tubes are called es segeńgeĭ = iron wire, and are differentiated according to their location as es segeńgeĭ ol berańgasch for the upper arm, es segeńgeĭ eń dagúle for the lower arm, es segeńgeĭ ol oreschet = what is worn on the lower leg (below the knee). This ornament, like the neck spiral (es segeńgeĭ e murt), /146/ is wound directly onto the body part in question and can therefore not be taken off, but only unwound again, which usually does not occur until death. The weight [481] of the ornamentation seriously impairs the mobility of the women and not infrequently gives them a waddling gait.

Warriors in dance ornamentation wear around their hips a leather strap embroidered with small beads (eńg ene ombolós; eńg ene is any strap, om bolós = the hip). Little girls also wear a [291] like-worked strap; it then bears a row of small chains in front as a fig leaf and is called en doré (pl. en dorén). Older girls and women wear around their hips an inch-wide belt likewise stitched with beads (Fig. 57), which holds the leather apron together. Boys [237] and younger men often wear below the knee and above the calf a ring made out of white neat's hide, with an end five centimeters long and one centimeter wide hanging down in front and in back (Fig. 58), and around each ankle a small bell (en duál, eń /Figs. 57-61 appear here/ duálań [Fig. 59]) tied on with a little strap, which, by its widely audible tinkle in the silent steppe, is supposed to frighten off predatory animals lying in the grass. Finally with the war and dance ornamentation belong the long-haired black and [237] white strips of skin (e mónge, e móngen) that the warriors tie around their ankles and that are made out of the skin of the white-tailed colobus (Colobus caudatus).

*233 head. Each herd was stopped several hundred yards from the water hole. The herds were watered in the order of arrival, the first herd moving up to the hole, small groups drinking as above, then leaving and its place taken by the next herd.

*233 <u>Numbers of Animals</u>: The emphasis of the Masai
• 554 is on numbers of animals, not on quality, and certainly not on any balance between numbers of animals and range productivity. The animals represent wealth in the broad sense. Goats, sheep, and occasionally cattle are traded for goods or sold. A certain number of cows are required for milk production. Beyond that, however, the Masai appear to regard cattle as a combination of status symbol, bank account, and object of reverence. The more cattle they have the better, and they see no point in selling cattle or trying to upgrade the cattle for that purpose. They do appreciate good livestock.
[857] Young boys often have a steer which they raise from a calf. They attach great importance to the condition of this animal. Still, wealth and status appear to be measured in terms of numbers of cattle, whatever their condition. Any effort to reduce these numbers seems to them a scheme to undermine their way of life.

*178 233 In former times the limiting factors mentioned

*233
231 We had the feeling, however, that donkeys just as other
• 554 livestock are a measure of success and security, and regardless of the need some donkeys would be maintained.

*136 These donkeys are small animals whose weight
231 is probably less than half that of a wildebeest (i.e.
*233 under 200 pounds). They are quite independent. We often saw the small herds of donkeys leave a boma unherded and go to a water hole, then graze back to the boma. This practice probably would not be followed in areas where predators were common, but in the peripheral areas it appeared to be the rule.

178 Large numbers of donkeys appear to have been
231 the rule for some time. Joelson in a general discussion
*233 of East Africa in 1928 referred (p.61) to the "Masai, who graze immense herds of cattle, small stock, and especially donkeys..."

*233
182 <u>Burning</u>
232 The Masai burn grass whenever it is dry enough
824 to ignite. The reasons they give for burning include the following: It produces a flush of new grass that is particularly palatable, nutritious and easily available for their livestock. It clears the woody growth and makes new grazingland. It clears or reduces ticks, tsetse fly, and disease.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

choice resting on the general consent of the tribe. He whom the previous laibon had held in greatest esteem, and trained and nominated for the office, would normally be chosen. The past reputation of the candidate would, however, be a matter for consideration; if someone, other than the deceased's choice, had proved himself extremely powerful, it is possible that he would be chosen, for fear of the consequences were he overlooked. The maxim of English law, that none should benefit by his crime, is also applied. For the death of a laibon is as a matter of course attributed to witchcraft by a fellow Engidong, and the first step in choosing a new laibon is to ascertain who killed the old; such person is automatically barred from succession. 791 [671]

It has been represented that the above theory of late development of the institution stands or falls on a Masai legend. The answer to that is that very few legends are found without some foundation of fact, and secondly that there are many indications that it is a feature not fully assimilated by the Masai organisation. [182]

B. **Pre-European Functions of the Laibon: Raids and War — Age-grade ceremonies (with certain restrictions) — local ceremonies — tribute — supposed administrative actions.**

Immediately prior to his death in 1890 Mbatian was living at Namanga, but had previously lived, as had his father Subet (8), at Lashaine Hill, immediately below the Mondul District Office. He was nominally the official laibon for the whole of the tribe, though his brother Mako lived and practised as a laibon at Engutoto lol Mako, in Ngorongoro Crater. It is also significant that Thomson refers to "the important Lybons (medicine men) Lengobe, Mbaration, and Lembarsacout," without singling out Mbatian as the leader. If he in fact occupied the position, bordering on chieftainship, that many Masai elders would have us believe, it is improbable that even an early traveller would fail to note and comment on it. 791

There can be little doubt that at this time a laibon's chief functions were:

i. Dispensing charms for raids.
ii. Supervising and blessing the age grade ceremonies.
iii. Propounding the ritual and giving charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall.

It is probable that any acts which he performed in the executive sphere arose from these three main duties, which must now be examined more fully.

In the matter of providing *charms for raids*, it should be noted that raids are divided by the Masai into two types, major (*ol orora*), and minor (*ol wamba*). Both these names also signify a group of moran fitted out for war, the former larger than the latter. A third term, which might well be recorded here is *o remore*, signifying a fight with spears, more particularly the deliberate killing of an alien for the purpose of acquiring a reputation. 726 791 [555]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

has a cow, which he looks after and tends, it bears, and by so doing enables him to live, for he can marry, and have children, and thus become rich. 233 181 [556]

Now cattle feed on grass, and the Masai love grass on this account. [824]

824

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God. [787]

If a warrior beats a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign. [928]

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them. [703]

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle. [627] [186]

Again, if a man who is proceeding on a journey sees a tree which has [484]

Ore 'n-gulye-tŏkitin náinoṣi.

in gourds. Some drink it pure; others mix it with milk[1].

There are a few other things which the Masai eat.

276

Enyaal il-móruak oo 'ñgorŏyok ol-kumbau áitushulaki e-makat o ol-kumbau loo-'l-muran. Netii 'l-oook too-'n-gumeshi ol-kumbau oidoñgo, nĕji en-gisugi. Netii sii kulikae oook too-'l-mŏtio.

Some old men and women chew tobacco mixed with salt and *Ocimum suave*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Ĕok sii 'l-muran, kake mŏok pŏkin. Menyaal ninje 'l-ayok araki 'n-doiye ol-kumbau, nemŏok; etoni ake.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco[2].

437 276 [249]

Metum il-Maasae ol-kumbau, amu meiyŏlo aatuturu; kake einyañgu too-'l-meek, áinoeye eng-orno oo 'n-dare tasati.

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

Memiraki 'l-Maasae 'l-meek in-gishu supati, 'n-gishu olupin ake oo nemeata kulle, oo náiba 'l-asho, ninje ake emiraki 'l-meek, oo 'n-dare móruak oo 'n-dasati.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

273

Nĕok sii 'l-móruak in-aishi, neinyañgu 'l-maruan o en-joi too-'l-meek.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marua and En-joi.

262

'N-gera ake náinoe en-aisho najon. Pŏki en-dŏki nainoe il-móruak te-'n-aisho najon il-changaro ake.

It is only the children who like wild honey: old men eat the comb full of grubs[3].

[171] [1] This custom is also common among the Bari (Kaufmann, *Schilderungen*, p. 170).

[556] [178] [825] [222] [2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-chani loo-'ng-onyak, the eye-medicine.

[3] The Masai obtain their honey by following the *Cuculus indicator* bird.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

631 chief; but in that year it was recognized that he was in fact no such thing, and the
648 native administration was reconstructed with 14 Native Councils, one for each division (Il-Purko, Il-Damat, etc.), to replace the original council of the *ol-osko*. These Councils were composed of *il-aiguenak*, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 46 headmen, some of them *il-aiguenak*. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled chiefs) and sub-headmen.

In Tanganyika, the laibon was at first regarded as the head of the Kisonko; but since this recognition proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid headmen.

MAIN CULTURAL FEATURES

CRAFTS

Housing

342 The Masai hut, *enk-aji*, pl. *ink-ajijik*, is a low structure with a flat or flattish
361 roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather hides are laid on top to keep out the rain. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The huts of the agricultural Il-Tiamus have thatched roofs of the normal East African pattern (p. 111). A temporary skin hut called *ol-gobor* is used for a temporary halt where pasture is poor.

Dress and Ornaments (Traditional)

714 Warriors wear a small calf- or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a head-dress of ostrich feathers or of lion-skin, a cape of vultures' feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece
[301] of goat-skin fastened to the belt. The distinctive warrior's ornament is the horn arm-clamp called *e-rrap*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-toros* is worn by warriors on certain occasions: Hollis says when going on a raid after electing an *ol-aunoni* (*ol-otuno*); John Tombo ole
291 Mbaei, when they go on a raid after making a vow to conquer or die. Elders wear
● [556 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys wear a sheepskin.

301] Married women wear a skin cape and a skin skirt held in place by a broad belt.
291 They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and from knee to ankle. All married women wear flat discs of coiled
301 iron wire, *i-sumtia*, hung by straps from the ear-lobes (like the Nandi *tsoh*), and some wear wide collars made of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

361 /26 cont./
417 are separated from one another by thorn barricades, and the huts
35 are often protected from damage by the cattle by means of thorny
824 branches placed around them.
233

One distinguishes between kraals for the married (eng an el
621 moruak) and such for the warriors (ol manjata). In the former live
361 the married men (ol moruo, el moruak) with their families, in the latter the warriors (ol morani, el moran) with their mothers and the half-grown, uncircumcised girls /27/ (en dito, n doje). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moruo kraals. A dense thorn-barricade extended around the entire kraal complex.

595 The married man on the average has five to six wives, wealthy
• [556] men have in addition also a few secondary wives to whom they
[736] are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

583 not alone, however, but with the support of a friend. The honey pot is hung on a horizontal pole, one of them grasping each end. It is not the weight of the pot that makes this method of carrying necessary, but an ancient custom, about whose meaning I have discovered [556] nothing. Wealthy people often also pay up to four cows more than usual, which is then regarded as the highest price that may be demanded. Beauties, as well as daughters of distinguished people, that is, of wealthy and influential people, often stand above the [587] average price. The price for childless widows and for childless, divorced women is the same as for young girls. for a widow who bore daughters, on the other hand, only a male and a female head of cattle are paid. In order that her father does not receive bride price twice, however, he gives back from the first one as much as the second one amounts to. For the second, third, etc. wife, just as much is paid as for the first. If the bride price is in part deferred for the bridegroom, the woman nevertheless passes into his possession provisionally, and likewise the children born before the final settlement of the bride price belong to him. If, however, he then ab- [586] solutely refuses to pay the rest, the father-in-law or the mother-in-law has the right to take back the daughter with her children in exchange for the return of what has already been paid. The cattle paid as bride price must be plain black or white. With the payment of the bride price, the bride withdraws from her family. In /46/ [606] some lineages, however, there still prevails a -- so it seems -- formerly general custom, according to which the father-in-law does not lose the right to interfere in the domestic relations of the young couple until the son-in-law has further given him a bull. The relatives of the bridegroom need not contribute the payment of the bride price, but usually do it if it is necessary. The bride does not get a dowry, just as the bridegroom does not receive a gift from his parents or parents-in-law. If one of the betrothed dies before the 583 marriage or dissolves the betrothal, the portion of the bride price 586 that was paid is returned. If the husband turns the wife out or the marriage remains fruitless, this has no influence on the bride price paid, while a possible remainder not yet paid remains unpaid. On the other hand, if a childless woman leaves her husband, the

/73 cont./

561 634 [791] [787] After he has counted off the little stones of his oracle game for a while, he decides that N., the son of M., is to become ol aunoni. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol [554] aunoni who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol borõr members there and, with these, again set out for the ol oiboni. Then a very large hut (os siñgira otunigi) is built there. When it is finished, the speakers take a number of warriors into their confidence and tell them who has been named ol aunoni. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon as this has been accomplished, a few of those standing around him [301] [291] push him down onto the stool, others place a string of blue ring-beads (ñ gonoñgo) around his neck, tie the spiral ear ornament made of copper wire (e surudia), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (e megiti) of the warrior, and in its place drape around him the long one of the married (the ol gela l ol moruak). Finally all those present cheer the new ol aunoni and cry out tadarawá jo ijõk eñ gischon, that is, remain poor, [556] bring us luck. The Masai in general maintain that every ol aunoni has remained poor; if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain [431] denied him. But he does not need it, for every man under him is obliged to give to the ol aunoni visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of foodstuffs always prevails.

After the ol aunoni festival is over, the other ol borõr members [574] [721] wander back home and celebrate a long meat feast (ol bul), whereupon they /74/ usually set out on a war expedition, while the ol aunoni himself goes back to his kraal and remains there.

[Warrior Kraal]

/87 cont./

701 554 [714] [534] fighting, large leg bells (el duallan kitwa), the tinkling of which in the latter instance serves to prevent a going astray by the individual warriors and a scattering of the troops. Where the bell sounds is a rallying point.

A special position is also occupied by the ñ gǎminini = benefac- [556] tors. They are warriors who, themselves generous, also have a generous, well-to-do father. From him they often receive oxen for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

701 703 577 Accordingly, miserliness is sharply condemned, and a miserly warrior or one who has miserly parents is treated badly and, in case of illness or wounding on the way, is not infrequently left to lie helpless.

701 578 [554] Speaker and leader live like other warriors and are not surrounded by any special ceremonial. Off duty they are treated with respect, which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to dueling, in which the opponents go after each other with sword and club, but only very rarely [683] wound each other seriously. If this should happen sometime, in a few districts the wounded one receives from the victor a fine con- [431] sisting of livestock; in other districts, only if a bone is broken. In general immediately after the duel /88/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also 701 the exchange of the skin cape (e megiti). The matter becomes more 578 serious if one is killed in a duel. First the father of the victor is then 682 condemned to pay a larger number of cattle. If he hands them over, the affair is settled. If he refuses them, however, the friends of the man killed attack his kraal and rob him of his entire herd. But they have scarcely brought them home before the friends of the one robbed also try to rescue them again. This goes on until they have become tired

/217 cont./

681 Unknown in penal law are: an aggravated death penalty, for example, death by fire, the principle of an eye for an eye, the view that the perpetrator must pay with the body part with which he has sinned, as well as symbolism, inprisonment, enslavement, a public monetary fine besides the composition, public monetary fines in general, a right of pardon.

683 There still remains to be pointed out one penal decree, which,
599 however, exists only for warriors. That the calling and way of life of the warriors, who are impressed primarily by brute strength and force, are not suitable for preventing rowdiness is obvious and is shown by the frequent, more or less rough brawls among them. Insofar as they seem useful for promoting personal courage, they are not punished; for those connected with bodily injury what was said above applies. For the brawls a stick or a club is used as a weapon and the shield for display. In order to force the opponent to leave himself open, one directs a blow on the left lower arm holding the shield, and, to be sure, not infrequently so violently that it is shattered. Now, if a warrior has already inflicted broken bones on the opponent several times, especially in the manner just described, all the warriors, under the leadership of their ol aigwenani, gather together and announce to him that he will be outlawed if he once more /218/ engages in a brawl; if the one warned violates this prohibition, every warrior of the kraal is justified in killing him.

692 The legal proceedings are the same in civil and penal cases;
561 in both there is only one court for the people of a district. For the warriors this is the speaker (ol aigwenani); for the older married men
•[556] an older, respected, i.e., wealthy, man chosen each time by the persons concerned to settle the particular case presented. In con-
[628] troversial matters between warriors of different kraals or, which is usually the same thing, of different areas, the speakers concerned jointly confer and decide, either alone or, if they do not reach a definite decision, with the advice of an ol aunoni, whose voice is then decisive. In disputes among married men of different areas a mixed council of elders decides. The ol oiboni may be regarded as a court of review, who, however, is called upon only in those
692 cases which concern the commonweal. There are civil proceedings

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

233 The Masai, numbering about 85,000, keep about one
177 million head of scrub cattle, and 660,000 sheep and goats.
556 They *could* export fat steers and lambs, but have done next to
[161] nothing to improve the quality of their animals. This is because they do not need the cash. There are old men living in mud hovels with little but ear-rings, a spear and a blanket who could at any minute realize several thousand pounds for their cattle. Scarcely one of them could not afford a motor-car if he wanted one, probably a Jaguar at that. The plain fact is they do not want motor-cars, or beds, or kitchen sinks, or radios, or refrigerators, or washing machines: they just want cattle, which they have, and which the processes of nature will increase for them without their having to do any disagreeable work.

It is an *impasse*. The whole machinery of modern society, modern trade, modern development, has been halted by the Masai's refusal to keep up with the Jones's, or the Kamaus in this case. It is like a great Britannia aircraft grounded by a midge in the works. Modern civilization runs on avarice as cars on petrol, and if there is no pump where you can fill up with avarice, you simply stay where you are.

But even the Masai are not really free of avarice: it merely takes a different form. If they do not want bicycles and trousers, they do want more cattle, and this has led them into a great error. Instead of rejecting everything the West offered them, they accepted the hypodermic syringe of the vets. First of all the vets put an end to rinderpest, and then, rather less successfully, dealt with various other diseases that were keeping their herds in check.

233 No doubt it would have needed superhuman self-denial on
177 the part of the Masai to have rejected this magical means of
185 ending the periodic epidemics that had wiped out all but a rump of their cherished herds. Yet these were the means by which nature had kept herds and habitat in balance. Vegetation, controlled by constant factors like rainfall and soil structure, cannot multiply as creatures of the animal kingdom can, and do. The fact remains that to accept the vet's syringe was fatal to the Masai, and to offer it to them, as the Government did, without also insisting upon some means of keeping down the livestock population, was an act of remarkable

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

175 extent are really controlled by the authority of the European district officers.
*698 It may seem strange that this race of brave and haughty warriors should have succumbed to tribes so inferior to them in military prowess as the Wakamba and Wa-Kikuyu, but the reason is to be found in the peculiar conditions of their mode of life.

"Once their own flocks and herds were decimated by the great cattle plague of a few years ago, the Masai, a purely pastoral people, were compelled by famine to depend, not partially as before, but exclusively, upon raids, and about half, or perhaps more, of the warriors of a given tribe would be absent for a long period on a foray, leaving the kraal, which with them, owing to the dislike of the whole race for any manual labour, is never stockaded or provided with defensive works of any kind, protected by a few hundred men.

"The Wakamba, and, after the Masai were driven from Ukamba proper into Kikuyu, the Wa-Kikuyu, would be on the watch for these raiding expeditions, and, as soon as one was well on the way, would swoop down on the undefended or only partially defended kraal in overwhelming numbers, and the raiders would return with their spoil only to find their houses in ashes, and the women and children whom they left behind there carried off to be sold as slaves.

"A constant repetition of these tactics, which their necessary dependence, after the famine, upon raids, prevented them from meeting, broke the power and prestige of the Masai, and those in the settled and administered portions of our Protectorate at least, with the single exception of Lenana's tribe, are now a mere feeble fragment of this once redoubtable people.

"They are mostly settled at Ngongo Bagas, a fort seven miles south of the district headquarters of Kikuyu, where they live under the supervision of an English officer.

"Lenana's tribe now have their headquarters at Naivasha, on the Uganda side of the border. Kinangop, their summer quarters, being also under the Uganda administration, and though Lenana himself is said to wish to settle in the East Africa rather than in the Uganda Protectorate (though up till now he and his people have been in the habit of wandering from one to the other), it would probably be most convenient that he should not be encouraged to do so.

"Besides Lenana's, a section of the Naivasha Masai have followed his brother and rival for the Chieftainship, Sendeyo, to the district known as Loita, on the German frontier, and pasture their cattle sometimes on ours, sometimes, but oftener, on the German side of the border. Sendeyo is said to be more hostile to Europeans than Lenana, and his attitude has of late given grounds for thinking that both we and the Germans might have trouble with him. There are also Masai tribes of whom, as yet, we know little or nothing, living at Ndoro, near the base of Mount Kenia.

*698 "A helot tribe, or rather caste, formed out of various conquered and enslaved
175 neighbouring tribes of Bantu race, constitutes the servile class among the Masai,
● 56 and performs the necessary domestic and manual labour which the latter deem degrading. This race or caste is known as the Elderobbo: their proportion to the Masai in the Province of Ukamba is said to be about 15 to 100. They are generally paid in kind for their labour, and are free to hunt themselves for meat and ivory, but must give half they get to the chief medicine man of the Masai. They are forbidden to marry Masai women, and their kraals are separate from those of their Masai masters. This is the only approach within the Province to any regular system of domestic slavery. Among its other races, such slaves as exist are generally members of a neighbouring free tribe, made prisoners in a raid.

*698 "These raids are, however, fast diminishing, as the authority of our Admini-
175 stration is making itself felt, and Mr. Ainsworth reports to me that, whereas in the years 1892 to 1895 not a month passed without serious troubles in connection with slaving and slave-trading, he has only had to deal in the last twelve months with a few isolated cases, not more than three having occurred in the last quarter.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 261 for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.

When the article forms a part of the above names, the vowel is omitted if it follows a word ending in a vowel. 193 552

Alo 'N-aiposha	I go to Naivasha.
Alo 'L-oitokitok	I go to Loitokitok.

The Masai reckon time by 'ages' or periods of about seven and a half years. The following account of the Masai ages is given in the words of the Masai themselves. 561 [805]

Eata 'l-Maasae 'l-porori lenye.	The Masai have what they call ages. 561 539
Memurati 'n-gera te-'wēji nēbo. Edufig śitaa 'l-porori, metushuli śitaa ol-poror ōbo, amu merisyoro pōkin; emurati 'l-kituak, nepali 'l-ooti metubulu.	Children are not all circumcised together: they are divided up into ages, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (i.e. until they reach the age of puberty). [881]
Ore lekwa kituak ooiteraki samurat nēji e-murata e-tatēne,	Now, those who are circumcised first belong to what is called the

[1] Owing to cattle plague, disease, and civil wars, the Masai occupying the Uasin-gishu and Aikipyak districts have practically ceased to exist. The remnants have been scattered and mixed with other tribes.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

561 539 naa ol-poror ōbo illo. Netoni 'l-ooti. Ore pe ebulu, nemurati si ninje, nejiāg illo-poror.

right-hand circumcision, and that is one age. The younger ones wait and are circumcised later. They also become members of this age.

Ore 'l-ooitōkīni aamurat te-kurum, naa likae-poror illo, nēji ninye e-murata e-kedyanye. Netoni sii 'l-ooti, nemurati si ninje, nejiāg illo-poror.

When the next circumcision festivals are held, those circumcised belong to what is called the left-hand circumcision, and that is the next age. The younger ones wait as before, and when they are circumcised they likewise join this age.

Ore 'l-pororí aare ēji ol-aji ōbo.

Now, two ages are considered equivalent to one generation.

Ore ti-atwa ol-poror ōbo nēoriori kat'-uni: etii ''L-chaāgen-ōpir,' netii ''L-tareto,' netii ''L-paringōtwa laāg.'

Each age has three divisions, first, those known as 'The big ostrich feathers,' secondly, those called 'The helpers,' and thirdly, those known as 'Our fleet runners'[1].

561 805 Il-porori loo-'l-Maasae oodamuni taata.

Masai ages which are now remembered.

E-murata e-tatene (Right-hand circumcision).	E-murata e-kedyanye (Left-hand circumcision).	Approximate date.
Il-Kinyōyo		
	Il-Tapari	1791 1799 } one generation.
Il-Kigiriyo		
	Il-Kisalie (the people of the plain)	1806 1814 } one generation.
Il-Kupai (the white swords)		
	Il-Kimirisho (those who drive away)	1821 1829 } one generation.

561 881 [1] When permission has been granted to hold the circumcision festivals (*vide* p. 296), one feast is held in each sub-district every year for four years in succession, and all those circumcised during these four years belong to the right-hand circumcision. An interval of about three and a half years then intervenes before another festival is held. All youths circumcised during the next four years belong to the left-hand circumcision. As an instance, a man born in 1872 would either belong to 'Our fleet runners' of the Il-Ñgarbet age or to 'The big ostrich feathers' of the Il-Kipōni age, i.e. he was circumcised in 1885 or 1889. Boys as a rule are circumcised when they are between thirteen and seventeen years old. Orphans and the children of poor parents frequently wait until they are twenty.

'N-DÎUN OO-'L-MAASAE
MASAI CUSTOMS

301 Seghenge oo-'murto oo 'surutya oo-'ñgorŏyok, oo 'n-gulye-tŏkitin.

Women's iron necklaces and ear-rings, and other matters.

Nĕji pe esta 'ñgorŏyok i-seghenge oo-'murto oo 'surutya
[585] [554] ĕji p' eiytŏtuni 'njere 'ñgorŏyok kunda.

The reason why women wear necklaces of iron and ear-rings (called 'surutya) is in order that it shall be known that they are married.

[881] Amu itadua, 'l-Maasae emurat in-doiye etaa bŏtoro, nĕji p'ŏori en-dito o-ñgorŏytŏni.

The Masai circumcise girls when they grow up, and these ornaments are worn to make a distinction between girls and women.

Amu ten epali 'ñgorŏyok mesta 'seghenge oo-'murto araki 'surutya, nemeiytŏtuni e-ñgorŏytŏni o en-dito.

For if the women were left without the iron necklaces or the ear-rings, it could not be ascertained whether they were women or girls.

881 ●56 Itadua, en-dito nemurati too-'l-Maasae nĕji en-dito ĕji e-ñgorŏytŏni: kake ĕji e-siangiki oo nettŏiabo.

A Masai girl who has been circumcised is not called girl but woman. That is to say, she is called young woman until she gives birth to a child.

Ten a kiti nĕleñg, naa e-ñgorŏytŏni ake etin nĕja.

Even if she is very young, she is considered to be grown up as soon as she has been circumcised.

301 554 Eiytŏtuni e-ñgorŏytŏni too-'n-dŏkitin uni, 'surutya, oo 'seghenge oo-'murto, oo 'l-ckesena. Nemesta 'n-doiye kunna pŏkin.

A woman is recognizable by three things, the ear-rings, the iron-necklace, and the big garment, none of which girls possess.

'Muetani epika 'n-doiye oo 'n-gutiti-seghenge nĕirina, naaji 'seenguni, o ol-gilishŏni, oo 'n-gulye-kutiti-tŏkitin naapik i-murto, 'l-piaya loo-'n-giyaa, oo 'seghenge oo-'ng-alk, oo 'n-oo-'n-gujik.

Girls wear beads, small pieces of iron wire (called 'seenguni), and other trifles round their necks, and a small cloth. They also have chains in their ears, and armlets and anklets of iron.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

'L-omon loo-'l-loñgui oo 'm-bória oo-'l-muran loo-'l-Maasaa.

Itadua, 'l-loñgui oo-'l-muran nepiki o-eirei tho; teriore.

Metii el-power lemeata o-eirei lenye, meñgur eli 'l-oshon i-eirei, metii 'l-muran lo-'l-oshe lemeata o-eirei lenye.

Amu tjó pe ten etumo 'l-muran oo 'l-meñgati, neiytibani 'ejere el-power tjo, kake le-'l-oshe tjo.

Eili 'eirei oeñgwan loo-'l-loñgui, o-eirei enyokye, o o-eirei enk, o o-eirei le-'l-loñge, o o-eirei loo-'l-kipelunj.

Ore 'm-bória oo-'l-muran nepiki eli o-eirei tho; teriore.

Ore ten eloli em-bere, neiytibani to-'l-figurat el-power tjo el-epeny, o el-oshe tjo.

Concerning the shields and spears of the Masai warriors.

714
531
639
561

The warriors' shields are not all of one design; they differ.

Each age and each sub-district has its own design.

In consequence, if the warriors meet an enemy, it is known to what age such a one belongs, and also to what sub-district.

There are four markings for the shields, the red one, the black one, the ornamental one, and the one for bravery[1].

Likewise with the spears, they are not all marked alike.

411
531
639
561

If a spear is found, it can be ascertained by looking at the lower part to what age and also to what sub-district its owner belongs.

'L-omon loo-'m-baa oo-'l-mirunk loo-'l-Maasaa.

Eata 'l-mirunk i-eirei lenye loo-'m-baa anaa eata 'l-muran loo-'m-bória.

Ten eloli em-baa, neiytibani el-oji le-'l-epeny o el-oshe lenye.

Concerning the arrows of the Masai elders.

The old men have special marks for their arrows as the warriors have for their spears.

If an arrow is found, the generation and the sub-district to which its owner belongs can be recognized.

[1] The Masai make use of four colours in ornamenting their shields—white, red, black, and grey. White is obtained by mixing water with white clay; red clay mixed with the juice of the *Solanum campylacanthum*, Hochst., produces the red paint; black is procured from the ashes of *Marsa* uniform, Vahl., or from charred potsherds and gourds; and grey, which is but rarely used, is obtained from cinders. [386]

554 Ore eji 'l-murran 'l-oilgnk ten eidim aetaar il-meek kumok.

hide on which is the blood is carried by the boy and placed on his head.

When the boys have all been circumcised they are called 'Ilpolio (*recluse*).

They remain at home for four days, and bows are prepared for them.

They then sally forth and shoot at the young girls, their arrows being blocked with a piece of honey-comb so that they cannot penetrate into the girls' bodies.

They also shoot small birds[1], which they wear round their heads together with ostrich feathers.

The Ilpolio like to appear as women and wear the surutya earrings and garments reaching to the ground. They also paint their faces with chalk.

When they have all recovered, they are shaved again and become Il-barnot (the shaved ones). They then discard the long garments and wear warriors' skins and ornaments.

After this their hair is allowed to grow, and as soon as it has grown long enough to plait, they are called Il-murran (warriors)[2].

The warriors are fond of the titles 'L-oingnk (the bulls) and 'N-gamisini (the generous people), for they may then wear bells or a bracelet called il-turuigan.

Now to become one of the Oingnk, a warrior must kill many savages,

[136] [1] The bird which the Ilpolio wear round their heads is the mouse bird (*Colius afber*, Shelley). Boys who behaved in a cowardly manner during the operation are not allowed to shoot these birds.

[2] This word is commonly but incorrectly written Elmoran.

After the bride's wedding-garments have been oiled, she puts them on, and is given a gourd which has been ornamented with cowries. This is put on her back, and she is taken by her husband, who is accompanied by two of his friends and two of the old women from his bride's kraal, to her future home. 585

She does not hurry but walks very slowly until she reaches her husband's kraal, where a child is given her to feed.

Ten eiyam ol-móruo e-ñgorōyōni, nemeipot eng-arna enye, amu torono. Edułgōki ae-arna. Enyor naleñg aipotye eng-arna o-'l-poror lenye, anaa 'N-oo-'Sōure.

When a man marries, it is considered unlucky if he calls his wife by her name. He must give her another name. A favourite method is to call her by the age to which she belongs, thus, The (woman) of the Seure age. 551 593 777 [561]

Ten eata ol-tuñgani oo-'l-Maasae 'n-gīshu kumok, neidim aiyama 'ñgorōyok kumok. Etii kulikae ooiyam 'ñgorōyok are, ana uni, ana oñgwan; kake eiyam íl-karsisi, ten eiyōu, tomon ana tigitām.

If a Masai owns large herds of cattle he is able to marry many wives. Some have two wives, others three, and others four; whilst if rich men wish, they may have as many as ten or twenty. 595

Ten eiyam ol-Maasani kat'-are araki kat'-uni, neisho en-gitok enye eng-alni ol-asbe, naa ninye eimalye eng-alni ajo Paashe.

When a Masai marries for the second or third time, his first wife gives the new wife a calf, after which they call one another Paashe, i. e. the giver and receiver of a calf. 595 431

Meidim íl-Maasae áiyama 'ñgorōyok e-'ng-aji enye ten etoni to-'l-oaho ōbo, kake eidim áiyama 'ñgorōyok e-'n-giabōmi enye, neidim áiyama 'ñgorōyok e-'ng-ae-kiabōmi.

No Masai may marry a woman belonging to the same sub-division as himself if both families live in the same district, but he may marry a woman of his own clan or one belonging to another clan. 582

682 oikopani eitu emut il-arin aare, amu ɛ̃jo eton esbal el-lughunya e-lido ɔ̃taaraki.

Ten ɛ̃ar ol-Maasani likae-Maasani, nɛ̃ji, 'Eitayo 'l-oikop'; mɛ̃ji, 'Etaarishe.' Nɛ̃ji ol-ɔ̃taarishe naa ol-ɔ̃taara 'l-meek.

Masai until two years have elapsed, for they say that the dead man's head is still fresh[1].

When one Masai kills another, it is called committing murder, it is not called killing. Killing is only used when referring to savages.

683 Naa, ten ɛ̃ar ol-murani ol-likae, pe edufig en-giok, neishooyo lido ɔ̃tudufigo ol-likae e-supen e-kerr. Naa, ten ɛ̃ar ol-likae, negil ol-oito, a ol-le-'n-geju, a ol-le-'ng-aina, a ol-le-'l-lughunya, neishooyo en-dauwo.

If a warrior strikes another and tears the lobe of his ear, he has to pay a young ewe. If he breaks a bone, either in his leg, arm, or head, he has to pay a heifer.

682 Naa, ten ɛ̃ari ol-ayɔ̃ni metua, melaki anaa ol-murani, kake eisboori 'l-bufigaiko onom.

If a boy is murdered, the amount which has to be paid is not as great as for a warrior, the price being fifty young bulls.

En-giopo.

Adultery.

684 [561] Metii ol-murani araki ol-ayɔ̃ni oidim staboitare en-gitok o-'l-poror le-menye. Ten eiyɔ̃ɔ̃uni, nedeki.

No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed.

Ore ten edeki, neishooyo 'n-giahu are, en-e-'n-aisho, naaropye 'l-paiyani pe medek. O ol-kitefig-ɔ̃yefig il-paiyani ten ɔ̃ok en-aisho.

Should he be cursed, he pays two oxen (one in lieu of honey-wine), and he prays the elders to remove the curse. The elders eat the ox when they drink their honey-wine.

836 837 [561] Kake meikɔ̃ni nɛ̃ja ten eboitare 'n-gituak araki 'n-doiye o-'l-poror lenye. 'Me toroco inna.

But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence[2].

[1] This law is not always put into force. The murdered man's relations are often willing to make peace on payment of a heavy fine, say 100 head of cattle.

[595] [2] From this it will be seen that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Ten eboitare ol-móruo engerai enye araki en-o-'l-poror lenye, torono. Ten eniñg ol-poror lenye, nēari, negili eng-añg, nēyeñgi 'n-gishu náiyōuni.

If an old man commits adultery with his daughter or with a girl of her age, it is considered a serious crime. The other old men if they hear of it beat him, pull down his kraal, and slaughter whichever of his cattle they want. 684 [561]

'M-bwat.

Nēji en-dōki naji em-bwata, naa 'l-ala aare eitauni li-abori.

The extraction of teeth.

There is something called em-bwata, which means the extracting of the two middle incisors of the lower jaw. 304 752

Neitauni te-'ng-alem.

A knife is used with which to perform the operation.

Eisho 'l-Maasae: nebwa 'ngera enye kat'-are. Ten eīni en-gerai, pe ebaya 'l-apaltin isyet, etubulutua 'l-ala pôkin, nebwai. Netonii.

The Masai extract their children's two middle teeth twice. They extract them first of all when the child is about eight months old, and all its teeth have grown. Then they wait.

Nepwo 'l-ala pôkin, neiñgwari 'l-opa-eotubulutua. Ore p' eitōki aabulu 'l-ala pôkin, nebaya en-gerai anaa en-eo-'l-arin tomon o aare, nebwai em-bwata e-kitoo, nemeitōki aabulu.

After the child has lost all its milk teeth and obtained the permanent set, i.e. when it is about twelve years old, the teeth are extracted a second time, and never grow again.

Ore p' eidip aatōbwa engerai, neairieki eng-omom il-mur loo-'sirkon, nēji: 'I'rōbija.'

When a child has had its teeth extracted, donkey's dung is put on its face in order to cool it. [237]

Ore opa p' eiteruaki aabwa 'l-tuñganak ēji, pe ten emweiyu ol-tuñgani, p' eitere, neony il-ala, neimyeki eng-are innabwata natōbwaki opa.

The origin of this custom of extracting teeth was to enable people, in the event of a man falling ill or being on the point of death, when his teeth would pain him, to pour water through the orifice[1].

[1] Hinde (*The Last of the Masai*, p. 42) writes: 'The origin of this custom is supposed to date back to a time when tetanus was a great scourge amongst the Masai, and they discovered that it was a comparatively simple matter to feed a man suffering from lockjaw if two of his front teeth were missing.' [113]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

621 the temporary residence of unmarried initiates or "warriors", called *ol manyatta*, pl. *i manyat*. According to MERKER,[18] "in every [634] section there is at least one warrior's village which gathers all the warriors of the section". This type of village is closely related to [561] the age-system institution. Therefore it is not a distinct territorial unit, though it shows the inter-relationship of the age-system and territorial organisation for its tenants are gathered from different villages. Indeed this is a further instance of the age-system's integrating power.[19]

* * *

614 Masai society is divided into two moieties, *en daloshi*, pl. *in daloishin*, which seem to provide a basis for clan organisation. Every Masai is found in either of the two moieties. These are named after cattle, one: *orok kiteng* — the black cattle, the other: *oodo mongi* — the red bulls. No exogamic restriction is attached to the moieties, 701 but, they seem to have an influence on military organisation. "Whe- 614 never", writes HOLLIS,[20] "the representatives of the clans take part in a raid", they are organised according to their moiety, and the loot is divided "into two parts, one part for each of these main groups".[21] MERKER, states that the words *orok kiteng* and *oodo mongi* are war-cries shouted by warriors according to their moiety. FOSBROOKE,[22] writes that the *orok kiteng* "are regarded as the right hand of the tribe", and the *oodo mongi* as the "left hand". He adds also that this dual division is typical of the "true Masai".

614 At the present there is no apparent relationship between the 634 moiety and the territorial system, but a few indications suggest that such a relationship existed in the past. Thus, in Laitokitok section, according to FOX[23] there is an equal number of "black

the Central Council being the Appeal Court. In the thirties, the system was again modified, and there are now two regularly constituted tribunals in each of the two Kenya Districts, Narok and Kajiado, in the Masai reserve, and an Appeal Tribunal in each district. It Tanganyika changes came later. Only in 1938 the Paramount Chief was abolished and a new system introduced. There is now a Masai Council, acting as the Appeal Court from the six Local Courts established under the authority of a Headman. Lord HAILEY, commenting on the Tanganyika system, remarks that " the whole of the juridical organisation seems on a tentative basis, and in practice it functions irregularly, owing to the nomadic habits of the people ". This is more or less true also for Kenya. It is a fact that, in Kenya and Tanganyika, the Masai never accepted the authority of the *laibon* or prophet in terms of Paramount Chief, and that they dislike the idea of a formally established court. [34] Nomadism, as Lord HAILEY points out, has much to do with this attitude of the Masai, but it is their social structure which has no place for such institutions. Whatever political authority exists among the Nasai, it is established on the structural basis of the age-system. This system has a dynamic character which can hardly be reconciled with the rigidity of any administrative system imposed from above by the Governement.

The institution of the Masai prophet has been described by FOSBROOKE, p. 13. He distinguishes three types of *laibon*. " First there is the private practitioner who, for suitable remunerations, will perform such service as curing sickness, removing barrenness and ensuring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a ceremonial to be utilized to the advantage of the whole group. Such prac-

[34] Writing of the Native Authority System in Kenya after 1918, Lord HAILEY says in *Native Administration in the British African Territories*. Part I — *East Africa*: *Uganda, Kenya, Tanganyika*, London 1950, p. 171, " these Tribunal were not generally recognized by the Masai who preferred that such issues as arose between them should be settled in the customary manner by the Headman or Elders ". And with regard to the new development he notes, p. 175, that " the preference for referring cases to the arbitration of local headmen or elders persists ". He makes a similar comment for Tanganyika on p. 294: " in the Masai District the majority of the issues arising between the tribesmen are settled by arbitration ".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

756 tices are alleged to be efficacious for the above-mentioned complaints,
791 and may also prove useful in procuring success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonials affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes." Therefore, it is clear first that the prophet is essentially a private practictioner, and secondly that his promotion to the higher stages of the practice derive primarily from his personal skill and good luck which give him reputation and, hence, influence on tribal matters. It is significant, however, that the prophet, even when he has reached the highest stage "retains the duties of the two previous stages", in other words, he does not cease to be a private practitioner. Therefore, the title "Chief which FOSBROOKE also uses, does not properly describe the prophet's office and makes it Medicine Man", more formal than it really is.[36] It is for the same over-formalisation that our early authorities and the Administration were misled in the evaluation of the prophet institution.[36]

III – PRELIMINARIES TO THE INSTITUTION OF THE AGE-CLASS

● 561 The age-system of the Masai consists essentially in a structure of age-classes distinguished from one another in terms of seniority. An age-class is instituted as the final result of a long course of initiation ceremonies, performed during an official approved time.

The age-class must be distinguished from other minor groups such as the age-units. These are formed at different stages of the initiation course as intermediate steps to the establishment of the age-class. The age-class follows from the merging and unification of two age-units.

The Masai term for age-class is *old aje*, pl. *il ajijik*; for age-unit, *ol poror*, pl. *il poror*.[37] These terms are frequently rendered into

[114] [36] Indeed FOSBROOKE is unable to decide wether the *laibon* is the chief medicine man of the section or tribe.

[36] See also below, and on the relationship of the prophetinstitution to the structure of the age-system as a whole see BERNARDI, *l. c.*, pp. 323, 331.

[37] MERKER, *l. c.*, pp. 70 ss.; HOLLIS, *l. c.*, pp. 122, 261 ss.; LEAKY, *l. c.*, pp. 191 ss.; FOX, l. c., p. 449; FOSBROOKE, *l. c.*, p. 25.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

English as 'generation' and 'age', respectively. Such a terminology is too vague and of little assistance in shedding light on the matter. 561

Sometimes the Masai apply those terms alternatively to the class or to the units,[38] but usually *ol aje* stands for the broader and final association i. e., the age-class, and *ol poror* for the temporary association i. e., the age-unit.

Age-class membership is obtained through initiation, and is held for life. The initiation course is opened by some preliminary ceremonies. These must be performed before any individual member may be initiated singly or in a group. Analysis shows that the importance of these ceremonies in connection with the institution of an age class varies greatly. There are four such ceremonies: 1) *Epolos e-sita*; 2) *Embolosata*; 3) *Endungore*; 4) *Engibata*.[39] 561 881

Epolos E - Sita, " The passing of the fence ".[40] " A Masai child ", states HOLLIS, " cannot be circumcised until the father has observed a custom called " The passing of the fence ". The ceremony consists in a period of four days segregation. The candidate's father lives in a special hut set apart from the village, where he also takes his food. During this time he wears the clothes, decorations and weapons of a warrior. On the last day he is taken back to the village by some elders. Before he enters the house where the ceremonial wine is kept, he is addressed five times by one of the elders thus: " Go, become an old man ". He refuses saying: " Ho, I shall not ". At the fifth time, he replies – " Ho, I have gone then ". He then, enters the hut and puts aside the warrior's paraphernalia; the honey wine is drunk; and he is called by his son's name, thus: The father 881 593

[38] WHITEHOUSE, *Masai Social Customs*, in *J. E. A. U. N. H. S.*, 3, 1913, p. 146; FOX, *l. c.*, p. 449.

[39] It is a widely held opinion that the institution of the Masai age-class is based entirely on the circumcision cermony. Actually it is not uncommon to find the term " circumcision " used as an alternative to age-system and its groups.This opinion is partly justified by the expressions " right-hand circumcision ", *emurata tatene*, and " .eft-hand circumcision ", *emurata kedyenye*, applied by the Masai to the first and second age-units, *il poror*, that forms a single ageclass, *ol aje*.

It is a fact that circumcision is one of the outstanding ceremonies of the initiation course. However, it should be realised that circumcision is not identical with initiation, and above all that the institution of the age-unit as well as the age-class does not arise immediately out of circumcision. Therefore the tendency to make everything connected with Masai age-system gravitate towards circumcision is misleading.

[40] HOLLIS, *l. c.*, pp. 294 ss.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 593 of so-and-so. When he replies to his name, he is told to go and make a profit. He answers: "Herds and flocks". This is repeated four times, and the ceremony is over".

554 561 881 593 The ceremony is performed only once in a man's life, namely when he "wishes to have his eldest child circumcised". This particular circumstance shows that by "the passing of the fence" a man obtains a special elderly status which gives him a right to have all his children initiated.

Thus, there is a relationship between the father's social status and the initiation into the age-class of his son's. None of these may be initiated unless the father has reached the proper status. The personal status of the father is reflected on his children. Therefore the "passing of the fence" is not in itself part of the age-system initiation, but a condition which must have been observed before a man is allowed to have his sons initiated.

[565] Other authorities (Fox) have stressed the fact that class membership of a Masai is somehow dictated by the class to which his father belongs. "The passing of the fence" gives a special emphasis to this fact and shows how a Masai's initiation into a class is conditioned by the social status of his father. It shows how the structure of Masai society stands on the balance of status of its members. [41]

881 634 [184] "*The tearing of the ox*" (*Embolosat ol Kiteng*). [42] Though this ceremony is performed by a single section or a group of sections, its performance has a far reaching value which is accepted throughout Masailand. The ceremony is performed by such sections as the Kakonyuke, the Dalalakotok and the Purko (all Kapiti). According to Fox the Kisongo also perform it. But this is denied by Fosbrooke, [114] who qualifies Fox's statement by saying that the Kisongo acknowledge and respect the value of the ceremony performed by the Kakonyuke.

881 561 634 As a matter of fact special importance is attached to the ceremony performed by the Kakonyuke, who in any case must be the first to do it and who have the lead in the matter. All the sections which

[41] The social balance between the father and his son is only an expression of a wider and basic principle, which, in our opinion, is an essential principle of Masai social organisation: the principle of the distribution of power. See Bernardi, *l. c.*, pp. 326 ss.

[42] Fox, *Notes on Marriage Customs among the Masai*, in *J. E. A. U. N. H. S.*, 42-43, 1931, pp. 189 s.; Leakey, *l. c.*, p. 448: *NAD*, 1926, p. 9, n. 1; 1927, p. 15, n. 61; Fosbrooke, *l. c.*, p. 27.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

do not hold their own ceremony come to, or acknowledge, the Kakonyuke ceremony. This is a point to be carefully noted. 881 561

Embolosat is preliminary not only to the circumcision ceremony, but also to any other initiation ceremony. [634]

Three different stages make up the whole of the ceremony, namely the election of the master of ceremonies, the contest, and the sacrifice of a bull followed by the naming of the age-unit.

a) The ceremony is organised by the elders. Their first task is to select a youth qualified to be master of the ceremonies (*ol opolos ol Kiteng*). They also must obtain his father's consent on payment of some helfers.

The transaction is kept secret because the office is not popular with the youths. The elders' nominee is then seized in order that he may not escape, and told what is in store for him.

Not every boy is eligible for the office, but only a member of the *Lugumai* clan. The *ol opolos* must wear the garments and the ear-ornaments (*surutya*) of the elders, whose status he is to be invested with, which seems the reason for the reluctance to accept the office. The status of the *ol opolos* is ceremonial and, according to FOX, he has no function outside the *Embolosat*. [614] [554]

The *ol opolos* has to supply the ceremonial bull, " without blemish, colour black with white breast ", [43] and the ceremony is completed at his village which is enlarged for the occasion. [44]

b) The day of the contest is fixed by the elders. In the morning the bull is taken back to the village, while the elders officially introduce the *ol opolos* to the other candidates. These are told to look up to him because he is their *ol opolos*. Then, the elders order the bull into the village and immediately the boys rush in to get hold of it.

Not all the boys enter the competition, only a few from each attending section. [45]

Members of the Kakonyuke section make a point of being victorious. The contest is stopped by the elders as soon as victory is [634]

[43] In the Annual Report, *NAD*, 1926, p. 9, n. 11, we are told that the " black ox is fed one day on milk and native beer, not being allowed to eat grass ".

[44] According to LEAKEY a special new village is built.

[45] LEAKY writes that " only three candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their houses while the ceremony takes place ".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

88 56 in sight. Victory consists in getting a hold of the bullock by its right horn and maintaining the grip.

c) After the contest the bull is smothered, and skinned; rings are made out of the skin and distributed by the *ol opolos*.[46] "The meat is eaten and the elders go to a place apart to pray to God for the boys. The age is then given a name which is kept until the *E-Unoto* ceremony, which takes place some years later". (Fox).

The bones of the ox are burnt and the fire is guarded to avoid any evil spell being cast on it.

Eventually the boys return to their homes and wait for their turn to be circumcised.

The fact that "only the right hand circumcision", i. e. the first of the two age-units of an age class, performs the ceremony is essential to an analysis of the significance of *Embolosat*.[47] It means that *Embolosat* is the first ceremony of the initiation which institutes the class, and not simply of the initiation which institutes the age-unit. Indeed the left hand circumcision, i. e. the junior age-unit of the class, does not perform *Embolosat*, and therefore the senior age-unit acting at *Embolosat* does it on behalf of the whole class. *Embolosat* should then be regarded as the starting point of a new class, opening the period during which the class is instituted. This specific value of *Embolosat* is confirmed by the acceptance on the part of all the Masai of the Kakonyuke ceremony. We do not know the reason why this ceremony should have such a paramount importance, but its social significance seems to be a thoroughly established fact. LEAKEY states that "only one ox-seizing ceremony (is held) in the whole Masai country, before a new age-group proceeds to initiation and circumcison". This statement is qualified by FOX in the sense that *Embolosat* is also performed by other sections, as we mentioned above, but the Kakonyuke must first perform it. Of the Kisongo FOSBROOKE writes: "the elders are extremely vague as to its (of *Embolosat*) meaning, but that the new age is formally inaugurated by *Embolosat* in Kenya is fully confirmed by the elders round Mondul".

[46] According to LEAKEY, the *ol opolos* is given a thong made from the skin and he is supposed never to throw it away, an obligation which does not apply to the youths who are given the rings.

[47] In the chart of Masai "age-grades" arranged by FOSBROOKE, *l. c.*, p. 24, *embolossi* is shown as taking place before the two circumcision periods of the age-units. This does not agree with the evidence offered by FOX.

[114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

The value of the Kakonyuke *Embolosat* is further ascertained from the analogous value of *Ngeherr* proper of the Kisongo. This is a ceremony perfecting the institution of a class. It is performed by the Kisongo and accepted by all the Masai of Tanganyika and Kenya. *See below.*

The fact that sections other than the Kakonyuke hold their own ceremony may probably be ascribed to the tendency of the section to act as independent group. Their performance, at any rate, has only a limited local value.

Endungore – Engibata. [48] It appears that these two ceremonies, *Endungore* and *Engibata* are closely connected, if not actually one single ceremony. [49] The aim of *Endungore-Engibata* is to define the period for the institution of the age-units and start the initiation course related to such institution. The ceremony is performed by "the right hand and the left hand" age units, i. e. before the institution of each of the two units (WHITEHOUSE, MERKER, FOSBROOKE).

Some of our authorities stress the fact that the first step towards initiation must be taken by the boys. This is true, but the decision to hold the ceremony rests entirely with the elders, and the aim of the candidates' action on the elders is merely to convince that the time is ripe for the decision.

The elders contacted by the boys are members of the class next but one above the class which is to be formed by the candidates. [50]

It is not the leading elders that the candidates contact first, but others, whose duty, apparently, is to instruct them on the right way and method of approaching the leaders of the elders' class.

Those who are to see the elders are selected with care. They "must be pure bred Masai and must have some knowledge of ceremonial routine" (DAWSON).

It is relevant to note these details. They show how the prospec-

[48] MERKER, *l. c.*, p. 61; BAGGE, *The circumcision ceremony among the Nawasha Masai*, in *J. R. A. I.*, 34, 1904, p. 168; HOLLIS, *l. c.*, p. 196; LEAKEY, 187 ss.; FOX, *Further Notes on the Masai of Kenia Colony*, in *J. R. A. I.*, 16, 1930, pp. 448 ss.; WHITEHOUSE, *l. c.*, pp. 146 ss.; DAWSON, *Notes on (a) Engapata ceremony, (b) milk drinking ceremony, (c) Ol Keremby*, pp. 1 ss.; *NAD*, 1932, p. 22, n. 63; *NAD*, 1937, p. 32, n. 54; FOSBROOKE, *l. c.*, pp. 16 s, 27 s.

[49] According to WHITEHOUSE *engibata* is the name of a dance which starts the *endugore*.

[50] In these and the following paragraphs whenever we refer to the elders" we intend the members of this class, unless otherwise stated.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 tive unit, and class, leaders are carefully selected and practically
561 trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Masai society, emerge.

The messengers (*ol amal* – message) wear warriors' garments
881 and decorations but no arms. "Their quest is a peaceful one"
561 (WHITEHOUSE).[31]
203

Only two of the deputation will be introduced to the class-leader (*aigwenan*) by some of the elders. The message is delivered on behalf
[431] of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

881 It is at this point that, according to WHITEHOUSE, *Endungore*
561 is performed.

The ceremony is started by a dance (*Engibata*) in full array[32] followed by a prayer to God (*Ngai Narok* = the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. "In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron*" (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *aigwenani*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say = *Ol piron lang elle, kira nalo.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

[31] It is cont lear whether the number of boy messengers is fixed. LEAKEY states that the *amal*-boys number from six to twelf, DAWSON 29, FOSBROOKE 9. Probably no significance is attached to the actual figure.

[32] Three rows are formed, each distinguished by proper decoration, the
[301] first wears ostrich-feathers, the second wears lion-mane head-dresses, and all
[300] the members of the third have their bodies decorated with white stripes.
[292]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

fire as a symbol of the new relationship between the elders and the candidates. 881 561

The next stage of *Endungore-Engibata* is the election of the unit leader (*aigwenani*). This office is not popular with the boys, [53] and the election is kept as secret as possible from the person concerned. It is not very clear whether the election rest primarily with the boys or with the elders, both have a say in the matter since it is of common concern. [54] The selected person is chosen from the so called *ingopior*, i. e. "those who have shown ability and strength of character during the many debates already held" (WHITEHOUSE). This indicates that he must be a man of talent and personality. Some consideration is also given to the clan and family from which he comes. [55] The appointment is forced upon the boy, but only after the approval of his family has been obtained. The insignia of the *algwenani* is a black club, which is presented to him by the leader of the elders. Prayers are also offered for the new elect. [782]

The naming of the age-unit takes place now with great solemnity. Not all the candidates are present but only a few of them. [56] These are called *mejengema*. They take part in the ceremony dressed up in full regalia and painted with red clay and chalk. [57] [302]

On the following day a great sacrifice of two bullocks [58] is also

[53] For the same reason given for the *ol opolos*.

[54] WHITEHOUSE states that "the names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves". On the other hand FOX, *l. c.*, p. 450, states that in the first instance the nomination is made by the elders, and if the candidates are dissatisfied with him they may ask for a change. MERKER, *l. c.*, p. 61, states the boys elect one of their member.

[55] Particularly, he must not be a member of the *Engidongi* clan, the clan of the *laibon*. [614]

[56] According to DAWSON, the *mejengema* must be 49 if the ceremony is for the 'right-hand' unit; 48, if the ceremony is for the 'left-hand' unit. These boys must be pure Masai, and must never have killed a Masai.

[57] "The *mejengema*", writes DAWSON, "assemble in the middle of the village and the *Aigwenani*, having poured honey beer into a trumpet made out of a *kudu* horn, blows two blasts on it and shouts the name. There is no answer as this name must never be mentioned by anyone. He again blows the horn and shouts out another name and is answered by a shout of 'Ho' from the *mejengema*. He again shouts out the name and is again answered by a shout of 'Ho'". The name is later announced to the other candidates by the leader and the *mejengema*. [534]

[58] The sacrifice of the bullocks (one must be entirely white, the other entirely black!) is ended by great ceremonial. The two beasts are smothered and [782]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 solemny performed. The festival lasts three days, during which
561 none of the candidates are allowed to leave the place. It is only at the third day that they remove all decorations and are allowed "to cross the stream".

The fourth day after the sacrifice, all candidates are informed by their leader that they are free to return home, and on doing so he warns them that they must be honest and loyal. With this *Endungore-Engibata* is over.

The relationship between the elders and the candidates, the *il piron* relationship, offers a special subject of analysis.

As stated above, the elders in question are members of the class next but one above the class to be formed by the initiation of the candidates. The gradation marking the two classes perhaps offers the clue to discovering why the sponsors of the candidates must be members of a definite class. We know from the rhythm of Masai class-system that the class next but one above the class of the candidates is generally the class of the fathers of the candidates. The
[554] *piron*-elders, therefore, possess the same social status as the fathers of the candidates. Hence, being on the same social level, the *piron*-elders possess the social capacity to be sponsors for the candidates. Such sponsorship brings about a mutual relationship between the two classes, a relationship respected by members of the classes concerned throughout their life.

The *piron*-elders have a real authority over the candidates so that no ceremony connected with initiation may be started by the candidate without the approval of the elders. The piron-relationship is officially established at the *Endungore* ceremony. [59]

[702] their blood is drunk in turn by the *mojongoma* and all candidates. Then two of the elders smear the face of the candidates with the bullocks' heart. The elders must be of the 'right-hand' unit, but they are assisted by two of the 'left-hand'. who take their place when they are tired. The meat is distributed among the elders (if warriors, i. e. the last initiates, are attending, they are not supposed to be seen eating meat in public), and the usual sacrificial hide rings are prepared for all those present. All the time the bones of the animals are watched to prevent stealing for the purpose of magic, and finally they are burnt out and all the remains buried underground.

[59] That the *piron*-elders take a strong view of their power is shown by a case reported by FOSBROOKE, pp. 16 s. In February, 1939, after *Endungore* had been performed, "a *Dwati* elder (i. e. senior elder, member of the class next but two above the candidate of the time) decided to circumcise his two sons, and brewed beer in preparation for the event. The local *Dorete* (the *piron*-elders), hearing of this, determined to stop him, marched into his *boma* (vil-

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Endungore-Engibata is performed both by the 'right-hand' and the 'left-hand' age units. This shows that the ceremony has a direct effect on the institution of the age units as such and not as coefficients of the age-class. The formation of the age unit takes place during an official period in which all its prospective members must be properly initiated. This official period is primarily defined by the performance of *Endungore-Engibata*.

Endungore-Engibata obtains its value by emphasizing the negative aspect of the new initiation period, namely by making it illegal, a new *piron*-relationship having been established, to initiate any one except on the new *piron*-elders' authority, and by closing the association of further members to the previous age-unit. [60]

Engibata, therefore is to be considered as the opening ceremony for the institution of the age unit. After *Engibata* candidates are legally initiated and automatically, i. e. precisely for having been initiated during a definite approved period, become members of that age unit.

From a territorial point of view *Endungore-Engibata* is a sectional ceremony. It is performed by minor territorial sections, but no single performance is acknowledged throughout Masailand, as in the case of *Embolosat*. This makes clear the different value of *Embolosat* and of *Endungore-Engibata*. *Embolosat* opens the period for the institution of the age-class, and therefore its value is accepted

lage) and drank the beer themselves. It is confirmed by numerous reliable elders, that, even if the *laibon* had given his sanction for the circumcision, the *Dareto* elders would have been justified in acting as they did". Note the prophet's limited authority.

[60] This is clearly shown by the case reported by FOSBROOKE and quoted in previous footnote. The *Dwavi* man had failed to inform the *Dareto* elders (the *piron*-elders) of his intention, and very probably his sons' initiation was intended to be performed by the outgone *piron*-elders. If the *Dwati* man had his own way, his sons would have become members of the last age-unit, but illegaly: hence the so strong objection of the *Dareto* elders. The above explanation is confirmed by what MERKER, pp. 70 s., states, namely that a fourth minimal division, *el oirogua*, could be formed by those who were circumcised immediately before the official closing of the period for individual initiation. See below. In *NAD*, 1937, p. 32, n. 54, we read as follows: " the Officer in charge reported that a number of *layok*. (uncircumcised boys) who would have been too old to await the next '*Ngebata*' were circumcised and incorporated in the *Kidoto* age ". Probably this is a similar case as that referred to by MERKER. The case shows that there is a definite closing time for every set. After this time every new initiate will be associated with a new set.

881 by all the Masai. It is performed by the first group of class members
561 (right-hand unit), but, as it were, on behalf of the whole class. *Endungore-Engibata* opens the period for the institution of the age unit. It is performed by the first batch of unit-members, who can be said to act on behalf of all their unit-mates.

Endungore-Engibata outs the period which was opened by *Embolosat* into two sub-periods during which the age-units are instituted.

To these two ceremonies, *Embolosat* and *Endungore-Engibata*, correspond two closing ceremonies having analogous effects and limitations. Thus, every age-unit is officially closed by the performance of the *Unoto* ceremony, and the class is officially closed by the performance of the *Ngeherr* proper.

The problem of the interval between these ceremonies will be discussed below.

IV – INDIVIDUAL INITIATION [61]

881 Individual inititation, or the first initiation of individual members, is effected through the circumcision ceremonial.

This initiation is not, territorially, a sectional ceremony, but it is performed at any village where candidates are found. The ceremony is enacted by small (2 or 3: FOSBROOKE), [62] or perhaps larger (MERKER), [63] groups of candidates, or even singly (FOSBROOKE, and HOLLIS), [64] and the latter seems to be the general rule according to (FOX), [65] The guiding principle seems to be that a candidate must be initiated at his father's village. [66]

The expression " individual initiation " describes how each and every candidate is expected to pass through it, and how the cere-

[66] " Each boy... at his own village separately " states FOX, *Notes on Marriage Customs among the Masai*, p. 190; and FOSBROOKE, *l. c.*, p. 28, writes " ... in the father's boma (village) ". The coming together of few candidates for initiation makes the performance easier and economic. Thus, for a purely economic reason the children of poor parents frequently wait longer than others for initiation.

the warriors with milk. This seems to be the feast that MERKER refers to as "the feast of the circumcised boys – *ol ogor lel aijok amerate*". The newly circumcised remain in his mother's house until the wound is healed. 881 [574]

c) At this stage all the newly circumcised assemble from the various villages; they form small bands and go around shooting at small birds with special small bows and arrows. They wear women's clothes, women's ear-decorations (used also by elders) and a special headdress to which they append the birds they kill. During this period they are called *es sibolio*, pl. *i-sibolio* – the recluse, and are under strict regulations: At evening they must return home and enter the village before the cattle. They must not drink blood or cut meat or touch it with their hands. They must not wash. They must avoid girls. They must not fight with, or be struck by, any other: if this happens, milk must be put on their heads. They must not go out in the daytime without their special headdress.

The period of segregation may last for some months. At the end by order of the elders they are shaved by their mothers (hence they are called the shaved ones – *ol barnoti* pl. *el barnot*) and presented by their fathers with the arms of the warriors, a spear, a sword and a shield. It is a peculiar distinction of the initiates to let their hair grow and to twist it into a pigtail of which they are very proud. [73] At this later stage the initiates will be called *ol morani*, pl. *el moran*, i. e. those who have been circumcised. [302] [302]

It is generally stated, and apparently even by the Masai themselves, that as soon as a youth is circumcised he becomes a man. The evidence shows clearly that the expression "becomes a man" does not describe the real social status of a newly circumcised. Even if the statement is taken to mean that through circumcision a boy has attained the status of a man, and therefore is entitled to full participation in Masai social life, the statement is at variance with the evidence. As a matter of fact no Masai is allowed to marry soon after circumcision. In order to marry he must be at least a senior initiate, i. e. a member of the senior age-unit. [74] A newly circumcised (i. e. a junior, and to some extent also a senior initiate) may 884 881 [582] 561

[73] On this particular custom, cfr. MERKER, *l. c.*, p. 143; ELLIOT, in *T. N. and R.*, 1948, n. 26, pp. 80 ss.

[74] The seniority of the age units is discussed in the next paragraph. With reference to the text above we note that even when a senior initiate marries, he is not allowed to beget children, as this is the privilege of the elders. See below, where LEAKEY and FOX are cited.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 not possess cattle of his own (cattle are the property of his father), and therefore he cannot form his own family which wuld not kelp nt. He may not eat meat in public; he may not drink milk on his own, but only with some of his age-unit mates; he is expected to live in a special segregated village; and as a member of the age unit, he is, individually as well as corporately, under the social and political authority of the elders. Finally, from the military point of view, although he is allowed to take part in raids or other police action, he is still considered a learner and is expected to accompany the senior initiated in order to be trained properly.

The expression, then, "becomes a man" is merely an antici-
[884] pation of a status not yet attained but towards which the first approved step has been taken.

561 554 Individual initiation causes a boy to become a full member of an age-unit, and thereby he is introduced into the active and governing sections of society. Indeed, in the present cultural situation of the Masai, circumcision is the main ceremony of individual initiation, and is the essential requirement for unit and class- membership. However, the initiate's membership into a definite unit or class derives primarily not from his individual initiation, but from the initiation being performed during the period for the institution of that unit or class. It is, therefore, from finding himself within a definite period that a Masai initiate obtains a definite place in the structure of his own society. Indeed, this structural effect of time on the initiate is the essential point of the age-system as a phenomenon relevant to social structive."

561 V – THE AGE-UNITS AND THEIR MUTUAL RELATIONSHIP"

The two age-units of a class are called respectively "the right-hand circumcision" (*emurata etatene*) and the "left-hand circumcision" (*emurata ekedyenye*). These two units are instituted in turn, in succession of time, 'the right-hand' first, 'the left-hand' second. That succession is usually expressed in terms of seniority, as we see below.

Each age-unit, however, is further subdivided. These subdivisions are formed by all those who have been individually initiated

during the same season. FOSBROOKE states that "circumcision", or better individual initiation "is usually performed during or at the end of the rains, a time of plenty among the Masai," and is suspended during the dry season". 561

It is, therefore the seasonal rhythm that causes a further division of the period for the institution of the age-unit and thereby brings about the minimal divisions of the age-class. The phenomenon is in some way due to the nature of things. Indeed, as Fosbrooke continues, "it is natural that those circumcised in one season possess a marked feeling of affinity towards one another. This shows itself in the possession of a group name for each batch, the same names being employed from generation to generation". [55]

There is no need to stress that "the possession of a group name" indicates that a special group has been instituted.

Within the period for the institution of an age-unit, i. e., between the performance of two successive *Endungore-Engibata*, individual initiations take place, according to FOSBROOKE [56] during four rainy seasons, and therefore four minimal age-divisions are formed as follows: (1) *il Changen epirr* or *il Kiperen*; (2) *il Paringetee-lang*; (3) *il Kirimbot*; (4) *il Tareto*. MERKER, [57] and HOLLIS, [58] state that the minimal divisions were three:
